Ministry of Higher Education and Scientific Research Scientific Supervision and Scientific Evaluation Apparatus Directorate of Quality Assurance and Academic Accreditation Accreditation Department

# Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

#### **Concepts and terminology:**

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

**Course Description:** Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

**Program Vision:** An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

**Program Mission:** Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

**Program Objectives:** They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure:</u> All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies</u>: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extracurricular activities to achieve the learning outcomes of the program.

#### 1. Program Vision

Excellence in teaching scientific subjects in industrial management, encouraging scientific research and international publishing of contemporary topics, while innovating mechanisms to serve society in general and the industrial sector in particular.

#### 2. Program Mission

The Bachelor of Industrial Management program supports the continuity of the university and college by focusing on the educational process, scientific research, and community service.

#### 3. Program Objectives

1. Contributing to the graduate's cognitive development in industrial management sciences in line with the goals of the industrial and service sectors and in harmony with the modernization of the specialty.

2. Improving the quality of the education process for the industrial management specialization in line with preparing graduates who contribute effectively to the industrial sector in light of attention to the educational and social dimensions.

3. Improving the efficiency of the department's staff and upgrading them to gain access to the global research community in order to achieve the integrity of the educational process.

4. Activating the department's role in community service by organizing seminars, workshops, and discussion panels, and contributing to continuing education courses, consulting contracts, and social activities with a humanitarian dimension.

5. Adopting the philosophy of continuous improvement of the quality of the educational process in the department.

#### 4. Program Accreditation

National standards for accrediting programs of colleges of administration and economics in Iraq.

#### 5. Other external influences

Ministry of Industry and Minerals + Nineveh Chamber of Industry.

# Professional Development

Mentoring new faculty members

I- Introducing them to teaching methods courses.

2- They pass the teaching validity test.

n Matrix Maria 1.000

3- Place them as an assistant with a professor of podiatry.

#### Professional development of faculty members

1.46

1- Requesting one grant per year.

2- They passed a regulation average of 80 or more.

3- Submitting annual proposals to develop the subject's vocabulary.

4- Participation in workshops and seminars in the department/college/university.

2 a.2

e for light

(72). .

#### 12. Acceptance Criterion

(Developing regulations related to admission to the college or institute, whether central admission or others mentioned)

Central admission + evening study

#### 13. The most important sources of information about the program

Department website

14. Program Development Plan

1- Training from our department participates in a ministerial committee to develop the department's curricula and from everyone

2-Dr.. Maysar and Dr. Fair pursuant to Ministerial Order No. 3/2199 dated 3/19/2023.

# Course description guide for the first stage

1. Course Name:

Arabic language (2)

#### 2. Course Code:

3. Semester / Year:

2023\_2024 the second course | first study | the first stage

4. Description Preparation Date:

2024

- 5. Available Attendance Forms:
- The lecture is in person
- 6. Number of Credit Hours (Total) / Number of Units (Total) 30 hours |30 hours
- 7. Course administrator's name (mention all, if more than one name) Name: Nadia Fadel Ali Hussein Al-Afandi Email:nadia.fadil@uomosul.edu.iq
- 8. Course Objectives
- **Course Objectives** The Arabic language is the language **Enabling students with Arabic** of communication and language skills and issues at all understanding between people and levels: phonetic, it is the language morphological, grammatical, The mother develops the student's semantic, and written linguistic outcome.The Arabic language gives the student the skills of expressing in classical Arabic towards their Arabic language related to religion and Arab heritage. 9. Teaching and Learning Strategies

Strategy	Teaching and learning strategies depend on the existence
	of a study plan developed by the teacher and its
	importance lies in the development of scientific
	thinking, in addition to its reliance on dialogue and discuss

that enriches the linguistic outcome of students.

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	Under stand the topic of the unit	Greet and get to know each other	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
2	2	Under stand the topic of the unit	Arabic sentence , sections of sentence ,actual sentence , nominal sentence , With daily assignment of five nominal sentences and five verb sentences.	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
3	2	Under stand the topic of the unit	Review the students in the previous lecture and then explain the types of effects in the Arabic language, how to differentiate between them and how to express them.	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
4	2	Under stand the topic of the unit	Identify the beginner and the news, and indicate how to know the beginner and the news and the sign of their expression, and write applications on the subject on the board and the participation of students in solving it	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
5	2	Under stand the topic of the unit	Statement of the types of beginner and types of news and identify each type and the way to differentiate between them and their expression with the mention of applications for each type, at the end of the lecture a daily exam with an introduction to Surat Al- Kahf	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
6	2	Under stand the topic of the unit	Identify the justifications for submitting the news to the beginner, and the	Theoretical and practical examples	Daily attendance, daily exams,

			justifications for deleting each of them, with a duty for each type		semester exams and assignments
7	2	Under stand the topic of the unit	Recalling the previous lecture and then explaining the missing verbs and why they were called by this name and identifying their meaning	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
8	2	Under stand the topic of the unit	Recognize the already suspicious letters and why they are called by this name and recognize the difference between them and missing verbs	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
9	2	Under stand the topic of the unit	Identify the number in terms of reminders and femininity with the countable and solve applications on that	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
10	2	Under stand the topic of the unit	Identify the difference between the letters Zaa and Dhad and how to differentiate between them in terms of pronunciation and writing.	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
11	2	Under stand the topic of the unit	Identify solutions to differentiate between the letters Dhad and Za through real use and figurative use	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
12	2	Under stand the topic of the unit	Identify the object with it, indicate its location from the sentence, and mark its monument with the oral exam.	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments
13	2	Under stand the topic of the unit	Identify the object for him and indicate his location from the sentence, and the sign of his expression with the discussion inside the hall on the subject.	Theoretical and practical examples	Daily attendance, daily exams, semester exams and assignments

# Course description guide for the fourth stage

2024

Course Name: Industrial information systems and modern systems

1.

2. Course Code:

3. Semester / Year: first

4. Description Preparation Date: 2024

5. Available Attendance Forms: Mandatory attendance for 15 weeks

6. Number of Credit Hours (Total) / Number of Units (Total): (3 hours per week)

7. Course administrator's name (mention all, if more than one name)

Name: assistant teacher shahad adil

Email: shahad.adil@uomosul.edu.iq

8. Course Objectives

-	
Course Objectives	1- Introducing students to the concept
	of industrial information systems and
	information technology.
	2- Introducing students to the concept
	of artificial intelligence and
	distinguishing between it and human
	intelligence.
	3- Identify the modern systems used

			in manufac	cturing process	ses.
9.	Teachir	-	ning Strategies		
Strategy	ý		ure and seminar method. ussion method.		
10. C	ourse S	tructure			
Week	Hours	Required	Unit or subject name	Learning	Evaluation
		Learning		method	method
		Outcomes			
			- A theoretical introduction		
			to industrial information		
			- Types of manufacturing		
			systems		
			-General introduction to		
			information technology		
			-Manufacturing processes		
			based on information		
			technology		
			-Expert systems and		
			decision support systems		
			- Semester exam		
			-Manufacturing		
			information systems and		
			technology and their		
			relationship to the		
			organization's strategy		
			- Information technology		

	[			T	
			and human resources		
			-Training and development		
			in the field of information		
			technology		
			-Information technology		
			and process re-engineering		
			-Information technology		
			and its electronic operation		
			-artificial intelligence		
			-Information systems and		
			paperwork		
			-Applications in industrial		
			management		
			Semester exam

		Evaluation	f 100 according to the tasks as	aigned to the st	udant such as
	-		monthly, or written exams, repo	-	luuent such as
12. L	earning	and Teach	ning Resources		
Require	d textboo	ks (curricular	books, if any)		
Recomn	nended	books a	nd references		
(scientifi	c journals	s, reports)			
Electron	ic Refere	nces, Websit	es		

1. Course Name: Expert systems and artificial intelligence

2. Course Code: IM4155AI

3. Semester / Year: second

4. Description Preparation Date: 2024

5. Available Attendance Forms: Mandatory attendance for 15 weeks

6. Number of Credit Hours (Total) / Number of Units (Total): (3 hours per week)

7. Course administrator's name (mention all, if more than one name)

Name: assistant teacher shahad adil Email: <u>shahad.adil@uomosul.edu.iq</u>

8. Course Objectives

Course Objectives	Learn about the concept of expert
	systems and its types.
	2- Identify the uses of expert systems
	in administrative work.
	3-Learn about the concept of artificial
	intelligence, its types, and ways to use
	it in administrative work.
	4- Training the student on how to
	benefit from expert systems and
	artificial intelligence in a positive way
	to achieve goals.

9.	Teaching	g and Learn	ing Strategies

Ministry of Higher Education and Scientific Research Scientific Supervision and Scientific Evaluation Apparatus Directorate of Quality Assurance and Academic Accreditation Accreditation Department

# Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

#### Concepts and terminology:

<u>Academic Program Description</u>: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the largeted learning outcomes according to specific learning strategies.

<u>Course</u> <u>Description</u>: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description,

**<u>Program Vision</u>**: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

**<u>Program Mission</u>**: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

**Program Objectives:** They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure</u>: All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies</u>: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

#### Approval of the Dean

#### 1. Program Vision

Meeting the requirements of the labor market for graduates who hold a high diploma in the field of industrial management, qualified with the cognitive skills that enable them to work in public and private sector institutions efficiently and effectively and contribute effectively to the development of the field of work.

#### 2. Program Mission

Obtaining qualified graduates armed with diverse sciences and knowledge in the field of industrial management, able to work in public and private institutions and having the ability to study, analyze and solve problems related to the field of work.

#### 3. Program Objectives

1. Knowledge enrichment in the field of production and operations.

2. Qualifying capabilities to deal with the field of work in the field of specialization.

3. Providing the student with experience and skills in the field of specialization.

4. Encouraging and motivating the student to generate creative ideas in

addressing problems in the field of production and operations.

#### 4. Program Accreditation

# Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

#### **Concepts and terminology:**

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectivos, including an accurate description of the targeted learning outcomes according to specific learning strategies.

**Course Description**: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

**Program Vision:** An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

**<u>Program Mission</u>**: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

**<u>Program Objectives</u>**: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

**Curriculum Structure:** All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

**Learning Outcomes:** A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

**Teaching and learning strategies:** They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

Director of the Quality Assurance and University Performance Department:

#### Approval of the Dean

#### 1. Program Vision

Developing and training job cadres in government institutions in multiple specializations to spread and consolidate the principles and values of quality among individuals working in public institutions at all administrative levels.

#### 2. Program Mission

Obtaining qualified outputs in the field of quality management capable of continuous research and improvement and finding developmental solutions in the field of work.

#### 3. Program Objectives

1. Knowledge enrichment in the field of quality of goods and services.

- 2. Building capacity to address practical problems in the field of quality.
- 3. Qualified for a position related to managing tasks related to management

systems.

#### 4. Program Accreditation

AACSB

#### 5. Other external influences

Government / ministry of higher education

# Academic Program and Course Description Guide Master

# Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

ATTACK AND ADDRESS OF TAXABLE ADDRESS OF

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

#### **Concepts and terminology:**

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

**Course Description:** Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

**Program Vision:** An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

**Program Mission:** Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

**Program Objectives:** They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

**Curriculum Structure:** All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

Teaching and learning strategies: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extracurricular activities to achieve the learning outcomes of the program.

#### 1. Program Vision

Responding to changes in the labor market on an ongoing basis in order to provide labor market requirements for master's degree holders that meet the needs of the labor market and achieve the goals and ambitions of production and service institutions.

#### 2. Program Mission

Outputs that have diverse academic abilities and the ability to work skillfully and deal with various problems in the work environment positively and find creative solutions in addressing problems in the field of work.

#### 3. Program Objectives

1. Providing the student with analytical skills by reviewing theoretical frameworks.

2. Establishing a culture of scientific research according to a scientific sequence.

3. Building cognitive capabilities to deal with problems related to specialization.

#### 4. Program Accreditation

AACSB

#### 5. Other external influences

Course Name: Expert systems and artificial intelligence

1. Logistics management

2. Course Code: IM4155AI

3. Semester / Year: second

4. Description Preparation Date: 2024

5. Available Attendance Forms: Mandatory attendance for 15 weeks

6. Number of Credit Hours (Total) / Number of Units (Total): (2 hours per week)

7. Course administrator's name (mention all, if more than one name)

Name: Dr. Bassam Muneeb Ali/ Assistant Professor

basam\_moneb@uomosul.edu.iq

8. Course Objectives

Course Objectives	Introducing the student to logistics management, its importance, and how to organize it. Introducing the student to basic and supporting logistics activities concept of purchasing, storage, transportation and distribution Introduction to the supply chain and its most prominent risks concept of green logistics
9. Teaching and Learning Strategies	

Strategy	1. Lecture and seminar method.
	2. Discussion method.
10. Course	Structure

# 8. Course Objectives

Course Objectives	Developing and activating the creative and applied
	capabilities of students in various financial and
	banking fields.
	2-Developing the knowledge partnership between
	the department and the labor market.
	3– Providing students with knowledge of all progr
	specializations
	4– Developing mental abilities by expanding the
	cognitive horizon for all program specializations
	5– The ability to analyze problems
	6– Applying theoretical concepts, rules and laws
	7– Giving students the ability to link various
	financial and banking variables
	8– Evaluating and judging applied cases
	9– The ability to discover problems and solve the
	in modern ways

					10 – Using real–life examples and matching them with theoretical studies			
					eloping capabilities to	use modern		
technologies in financial and banking sciences

knowledge.	• The general description of the Crisis
	and Emergency Management course

includes a set of key elements:

- Understanding Crises and Emergencies: The course includes a comprehensive study of the concept of crises and emergencies, including potential types of crises such as natural disasters and economic events.
- Risk Assessment: The focus is on how to assess risks and prepare for various potential scenarios. This includes analyzing potential damages and assessing necessities and priorities.
- Response Planning: The course involves developing response plans to deal with crises and emergencies, including identifying roles and responsibilities and directing real– time actions.
- Crisis Management: The emphasis is on how to manage crises when they arise, interact with stakeholders, and make critical decisions to maintain business continuity.
- Business Recovery: Students learn how to plan for business recovery operations after a crisis or emergency, including restoring infrastructure and resuming core operations.
- Lessons Learned: Students are required to study lessons learned from previous crises and how to

develop better strategies for the	
future.	
<ul> <li>The Crisis and Emergency</li> </ul>	
Management course plays a vital	
role in preparing students to face	
unexpected challenges and	
emergency situations in the field of	
industrial management. It provides	
them with the necessary tools and	
knowledge for planning,	
implementation, and recovery in	
crisis situations, contributing to the	
achievement of sustainability and	
success in industrial operations.	
1. B. Evaluation methods	
<ul> <li>Understanding the theoretical foundations of crisis and emergency</li> </ul>	
management: Defining the basic	
concepts and theories related to crisis	
and emergency management and how	
to apply them in the context of	
industrial management.	
• Developing administrative skills:	
Providing students with the	
necessary skills to deal with	
emergency situations and manage risks in the industrial work	
environment.	
• Planning and preparing for crises:	
Teach students how to assess risks	
and develop strategies to deal with	
potential crises.	
<ul> <li>Implementing plans and responding</li> </ul>	
to crises: Introducing students to the	
steps of responding to crises and how	
to implement pre-prepared plans.	
<ul> <li>Performance evaluation and learning from crises: Enhancing the ability to</li> </ul>	
evaluate management's performance in the face of crises and use learning	
in the face of crises and use learning

Ministry of Higher Education and Scientific Research Scientific Supervision and Scientific Evaluation Apparatus Directorate of Quality Assurance and Academic Accreditation Accreditation Department

# Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

SAMA NAME AND A DATE A

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

# Concepts and terminology:

<u>Academic Program Description</u>: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

**Course Description:** Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

**<u>Program Vision</u>**: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

**Program Mission:** Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

**Program Objectives:** They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure</u>: All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

**Learning Outcomes:** A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

**Teaching and learning strategies:** They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

## Approval of the Dean

#### 1. Program Vision

In response to developments and changes in the labor market and working to provide academics with high scientific abilities and skills that meet the requirements of the labor market and raise the scientific level of educational institutions in the public and private sectors.

#### 2. Program Mission

Providing scientific cadres with specializations capable of keeping pace with developments in the field of higher education and actively contributing to solving practical problems in the practical field.

#### 3. Program Objectives

1. Knowledge enrichment in the field of specialization.

2. Building analytical capabilities to interact with and address problems.

3. Encouraging and motivating the student to generate creative ideas in

addressing problems in the field of production and operations.

#### 4. Program Accreditation

ACSB

#### 5. Other external influences

Ministry of Higher Education
