

About the Department of Economics

Vision, Mission and Objectives

Vision

The department seeks to enhance the educational process in the field of economics, recognizing the importance of producing competent economists who can advance the economic reality of society. It aims to adopt methods and approaches that align with contemporary progress and modernity across various areas of life, including economic sectors, while also preserving the authentic national identity of society.

Mission

As one of the college's departments, the department is committed to implementing the essence of the Higher Education and Scientific Research Law, which emphasizes providing education for all members of society. Its mission includes graduating competent economists who can contribute to formulating the country's economic policies, enhancing economic awareness among society's members, and fostering an economic culture that effectively manages societal progress while preserving its resources and energies at the highest levels of productivity and creativity.

Objectives

١. To cultivate competent economists who can absorb various schools of thought and global economic policies, utilizing this knowledge to formulate economic policies that are appropriate for the country's economic reality.
٢. To expand theoretical and quantitative economic studies by establishing branches for applied and quantitative economic studies within the Department of Economics, thereby providing state institutions and the private sector with advanced economic capabilities to make sound future economic decisions.

٣. To develop qualitative specializations in postgraduate programs (higher diploma, master's, doctorate) in economics, focusing on both theoretical and applied perspectives of the studies.

٤. To promote the translation of methodological books in economics into Arabic and support lecturers in publishing their scientific outputs both domestically and internationally.

٥. To support economic research by facilitating participation in national, Arab, and international scientific conferences and seminars.

٦. To engage with all official state institutions within postgraduate programs to study the problems and obstacles they face and to find appropriate solutions.
