monitoring and control, as well as developing economically and environmentally sound management technologies, and to be a national center for collecting information, implementing research and developing strategies related to organizing and managing pests, and a window for communication and transfer of expertise and supporting activities provided by universities, institutes, institutions, agencies and local and international organizations to advance our agricultural reality and face the challenges of climate change.

#### Program Objectives

- 1- Preparing specialized engineers in the field of plant protection to contribute to the advancement of agricultural reality under climate change conditions.
- 2- Conducting applied and academic scientific research to solve the problems facing Iraqi farmers and providing the public and private sectors with scientific consultations and expertise to solve the problems facing agricultural production.
- 3- Identifying, diagnosing and combating local and invasive pests that affect economic crops.
- 4- Organizing seminars and workshops that present the results of scientific research targeting agricultural and agricultural guidance departments as well as farmers and developing future plans and management programs for important insects and plant diseases that affect strategic crops.
- 5- Contributing to serving the community by conducting awareness campaigns on the need to control pests and involving students and teachers in planning and implementing these campaigns

during field practice programs. 6 -Breeding and developing honey bee strains and providing expertise and support to honey producers
