Performance of Translating the Style

Writing a textbook can be the most insufferable donkey-work, your colleagues may praise you, your family may be proud of you, but it's donkey-work all the same, and you are the donkey. Dear God! Would a navvy put up with this? Would a dustman – cry you mercy, sanitary operative – sustain these grubby labours?

قد يحتاج تأليف كتاب جامعي إلى (شغل الحمير) فقد يمدحك زملائك، وقد تشعر أسرتك بالفخر بك، لكن لا يغير هذا من حقيقة هذا الشغل، وأنت الحمار يا إلهي! هل يستطيع عامل غير تحمل هذا؟ هل يستطيع (الزبال) – عفواً – عامل النظافة أن يصبر على هذه الأعمال الوضيعة؟

Performance of Translating the Style

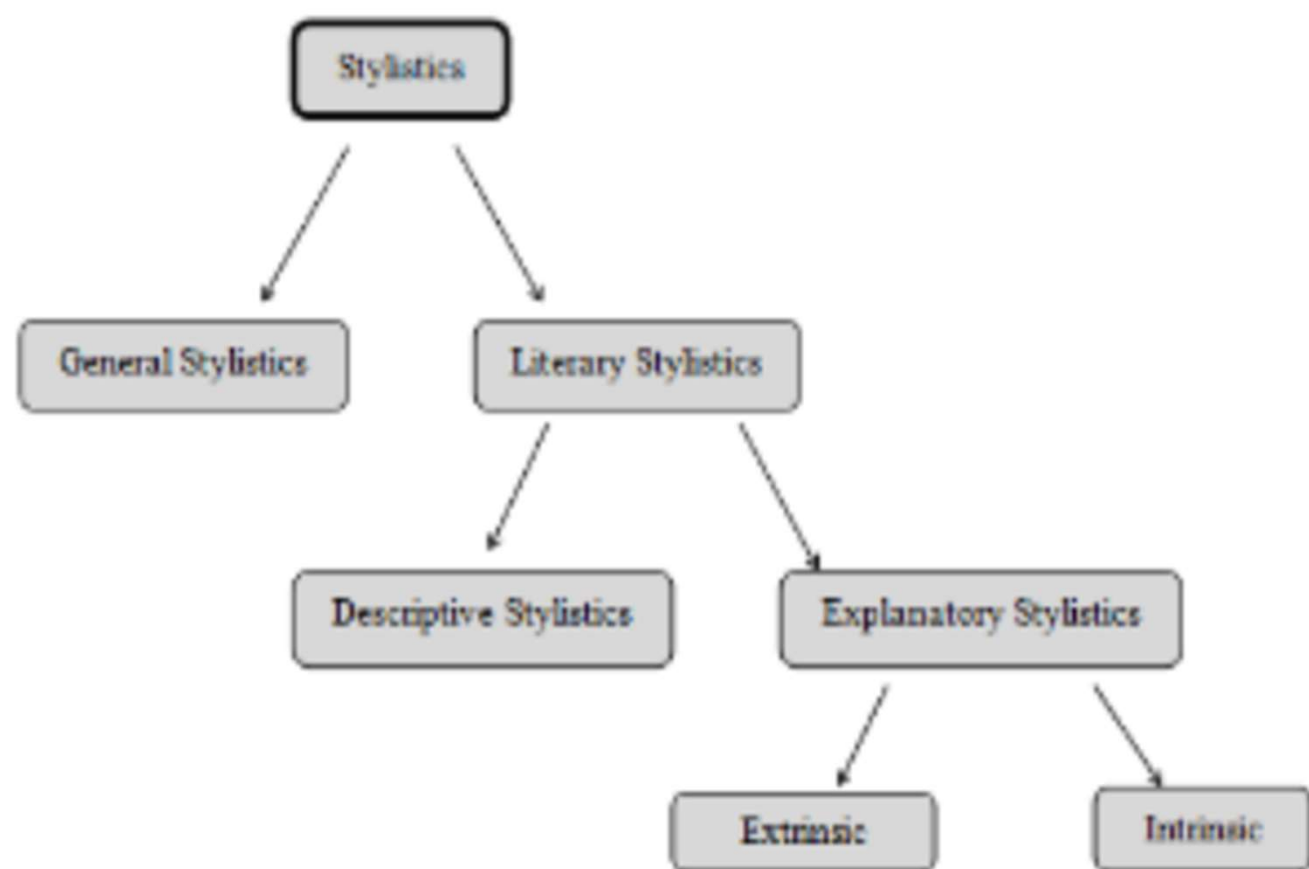

Writing a textbook can be the most insufferable donkey-work, your colleagues may praise you, your family may be proud of you, but it's donkey-work all the same, and you are the donkey. Dear God! Would a navvy put up with this? Would a dustman – cry you mercy, sanitary operative – sustain these grubby labours?

قد يكون تأليف كتاب عملاً فوق طاقة البشر، فقد يثنى عليك زملائك وتنتباهي بك أسرتك، ولكن هذا لا يغير من الحقيقة شيئاً، فالتأليف فوق طاقة البشر وأنت الضحية، يا الهي! إنه عمل يحتاج منك صبر أيوب (عليه السلام). هل يطيق هذا عمال إصلاح الطرق والبنائون وأصحاب الأعمال اليدوية الشاقة؟ أو يصبر عمال الخدمات – أستمحكم عذراً – موظفو البلدية على عمل وضع كهذا يحرق الأعصاب؟

Definition

Stylistics, or what is often referred to as "literary linguistics," is the study and analysis of writings, particularly, though not primarily, literary literature. The poetics and particularly the rhetoric of the ancient classical civilization are where stylistics first emerged. The classical diagram of stylistics is the following:

Preliminaries

There is no question that the rhetoric of the ancient world forms the essential basis of stylistics. The Russian formalists played a key role in this evolution, particularly Roman Jakobson, Viktor Shklovsky, and Vladimir Propp.

Jakobson concentrated on language's poetic function, Propp on the components of stories and the recurring, universal themes that appear therein, and Shklovsky on how literature defamiliarizes or "make cultural strange."

It is clear that much of this work is a recycling of ideas from the ancient

world of rhetorics and poetics. For example, Shklovsky's 'defamiliarization' theory, which is the aesthetic function that words that are ordered and presented in a fresh way can make a reader see a particular world, in a fresh light.

Russian formalism

Early in the 1930s, Russian formalism started to fade, although it persisted in Prague as structuralism. The Prague School gradually shifted away from formalism and toward functionalism. Much of the stylistics used today have their origins in the integration of context in the creation of textual meaning.

WHAT IS
FORMALISM?

Formalism: Form and content are inextricable.

Linguistic Turn

Russian Formalism

- Viktor Shklovsky
- Roman Jakobson

Cultural Turn

New Criticism

Human Liberalism

Modern stylistics embraces corpus, critical, cognitive, educational, pragmatic, gender, multimodal, and, most recently, neuroscientific methods, going well beyond the rhetoric, poetics, formalism, structuralism, and functionalism of the past. The field may first appear to be fragmented due to this diversity.

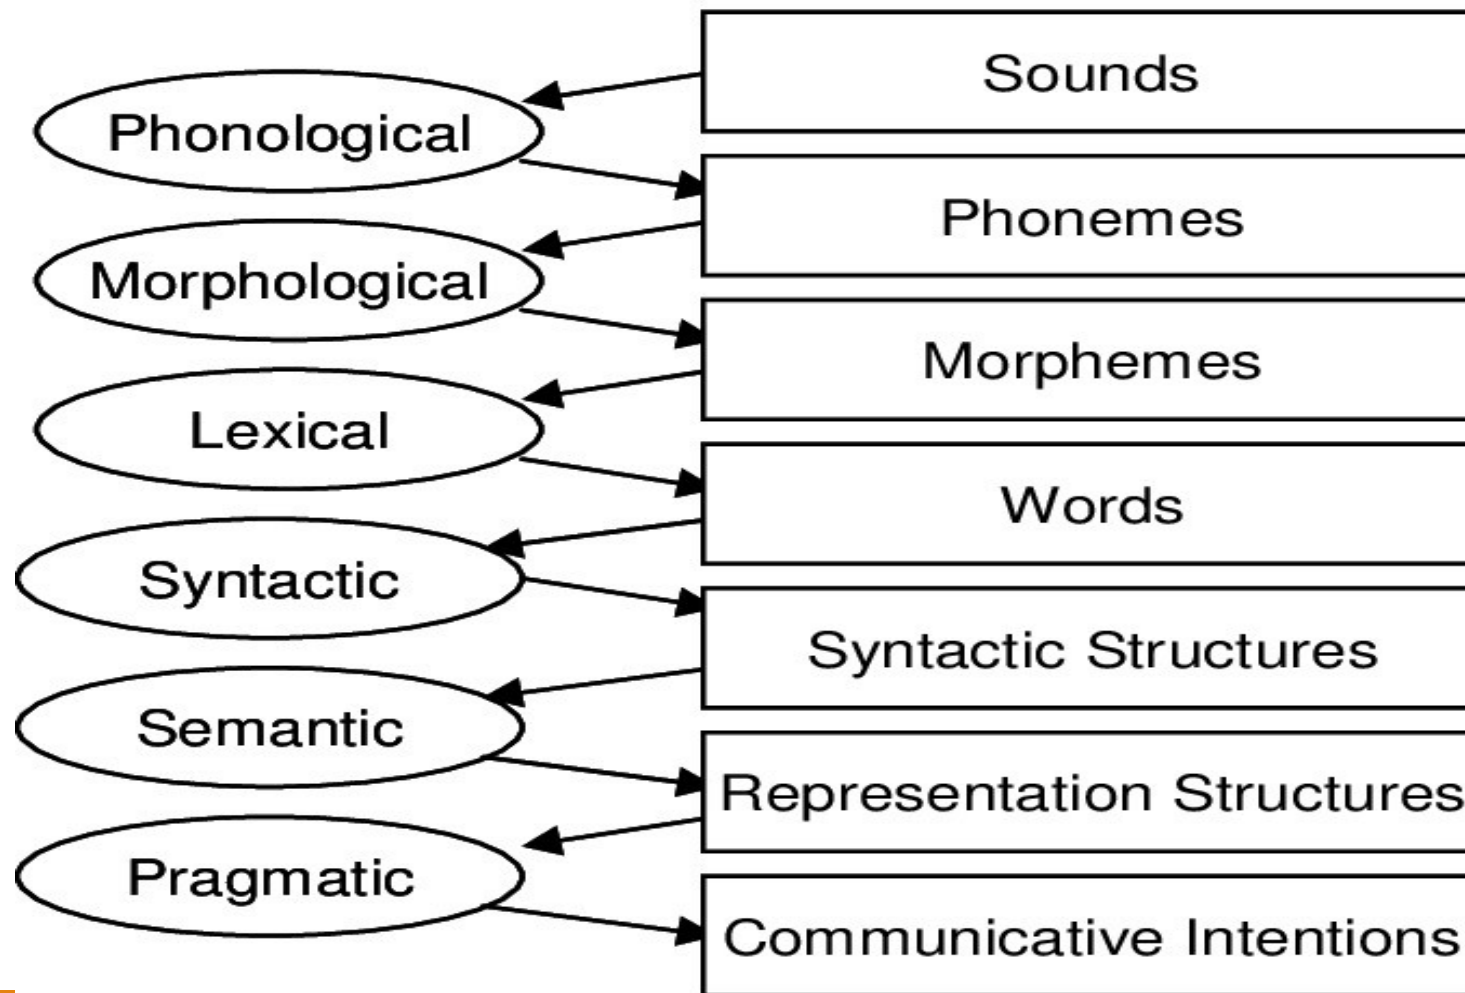

On many levels, Paul Simpson (2004) explains stylistics as interdisciplinarity

research that aims to achieve a method of textual interpretation and analysis in which primacy of place, time, structure and culture are assigned to language explains stylist. See the levels of stylistic analysis:

Analyses

Structures

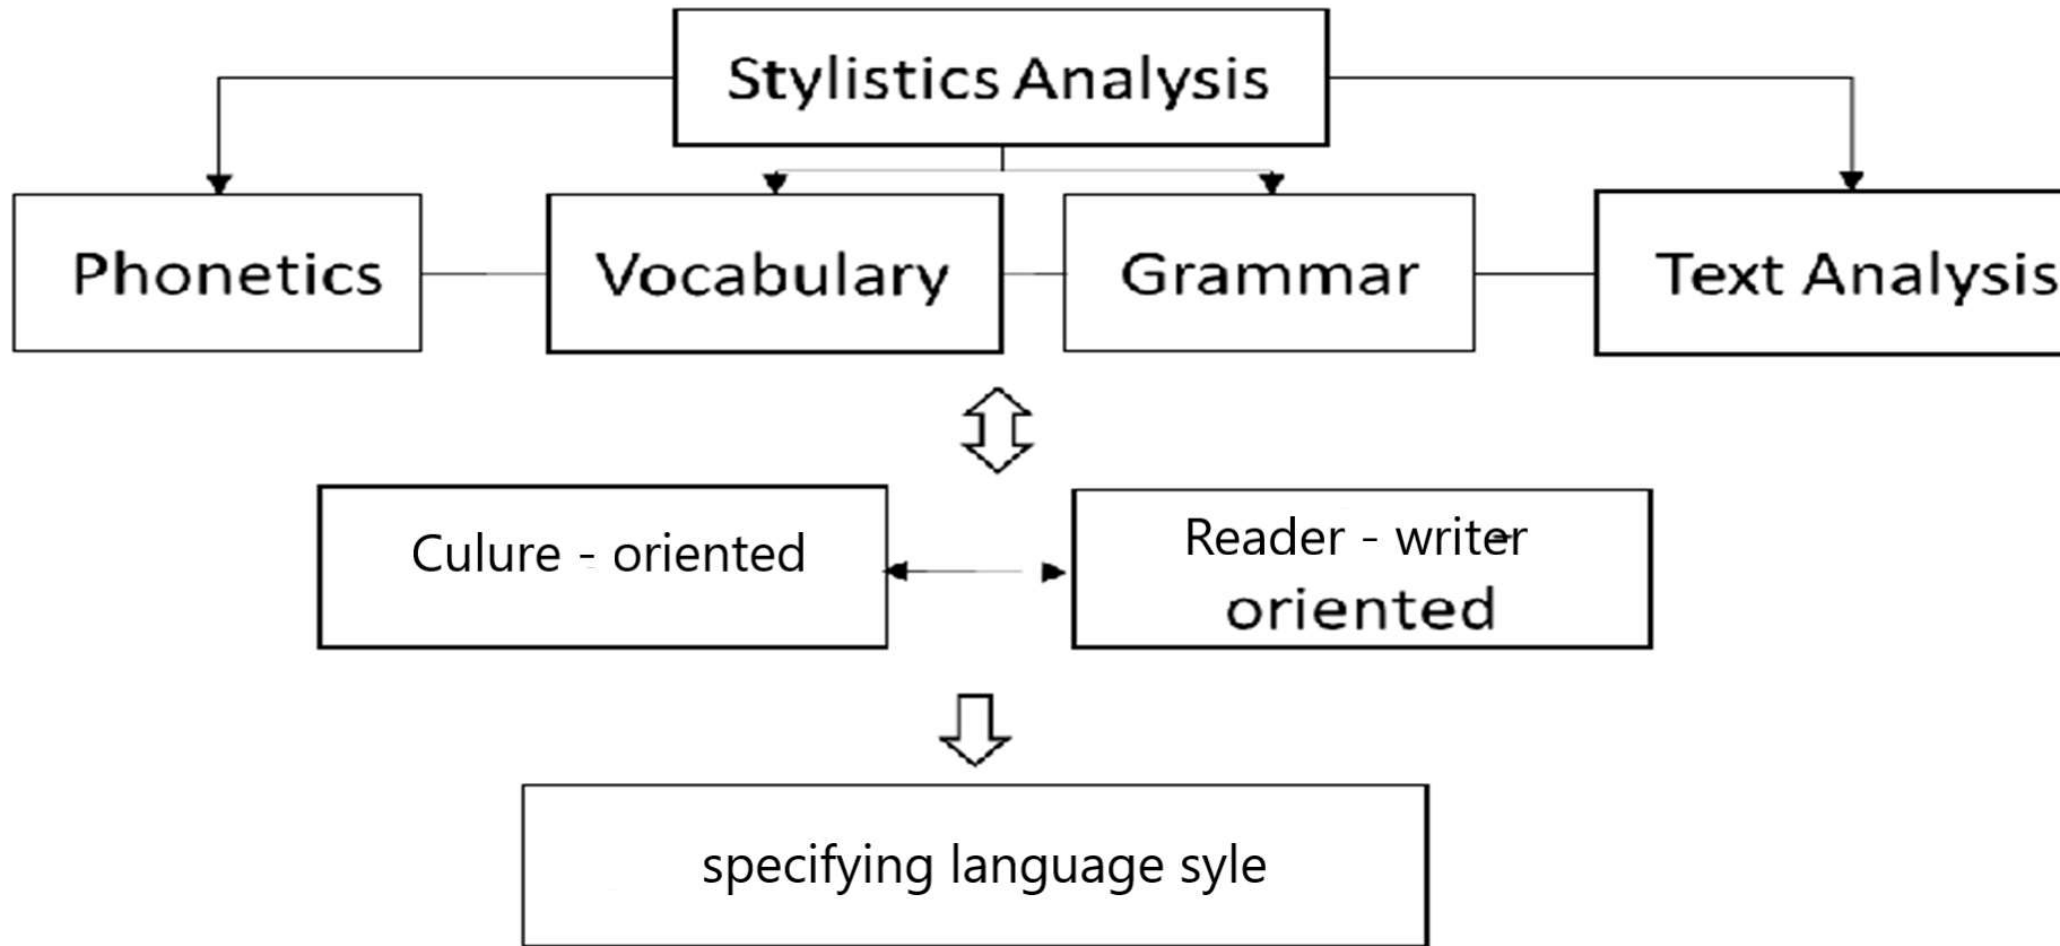

A magnifying glass with a silver handle and a clear lens is positioned diagonally across the frame. The lens is focused on a white surface, which appears to be a piece of paper. In the background, a silver pen is visible, lying horizontally. The overall image has a soft, slightly blurred quality, with a light blue and white color palette.

Methodology of stylistics

Thus, stylistics still possesses the methodological traits that rhetoric passed onto it. Its power comes from its ability for application to textual data, which is its sole purpose.

Over time, stylistic methodologies—qualitative and quantitative—have improved. According to stylist Ron Carter (2010), style should aim to be "open, evidenced, and retrievable". This claim is crucial to stylistics in that it supports the falsifiability assumptions that science holds.

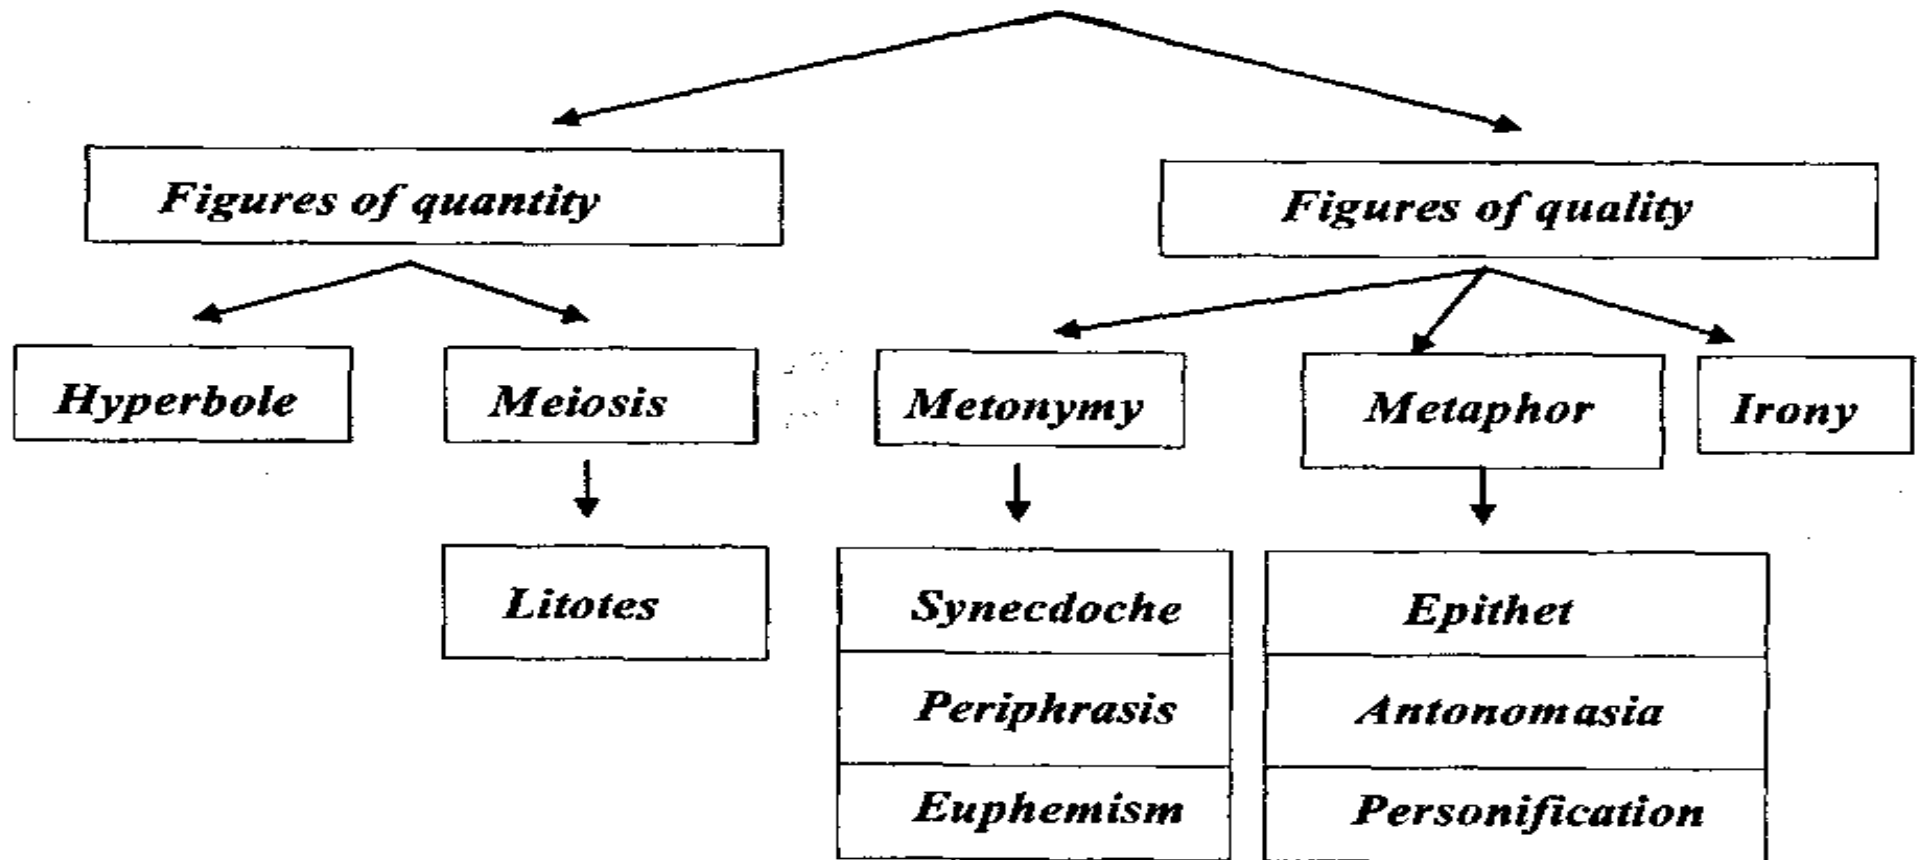

Mick Short (1996), another stylistician, asserts that language description should be used to support independent critical claims made in the context of literary studies of interpretation and evaluation. See the following figure:

FIGURES OF SUBSTITUTION

Stylistic analysis

A stylistician, who has a thorough understanding of the language functions and levels, can be thought of as a type of empirical or forensic discourse critic:

DISCIPLINE

Linguistics ↔ Literary Criticism

SUBJECT

Language ↔ Literature

STYLISTICS

The diagram illustrates the relationship between disciplines and subjects in the field of Stylistics. It is structured as a 2x2 grid. The top row, labeled 'DISCIPLINE', contains 'Linguistics' and 'Literary Criticism', which are connected by a solid double-headed arrow. The bottom row, labeled 'SUBJECT', contains 'Language' and 'Literature', also connected by a solid double-headed arrow. In the center of the grid is the word 'STYLISTICS'. Four solid arrows point towards this central word: one from 'Linguistics' to the top-left, one from 'Literary Criticism' to the top-right, one from 'Language' to the bottom-left, and one from 'Literature' to the bottom-right. Additionally, there are two vertical dashed double-headed arrows: one on the left connecting 'Linguistics' and 'Language', and one on the right connecting 'Literary Criticism' and 'Literature'.

The next step for stylistic analysis is to see whether there is any linguistic evidence to back up this assertion and/or to look for counter-evidence to refute it. For example:

The stylistic analysis of translation performance backs up this claim in translation theory. See the following steps diagram:

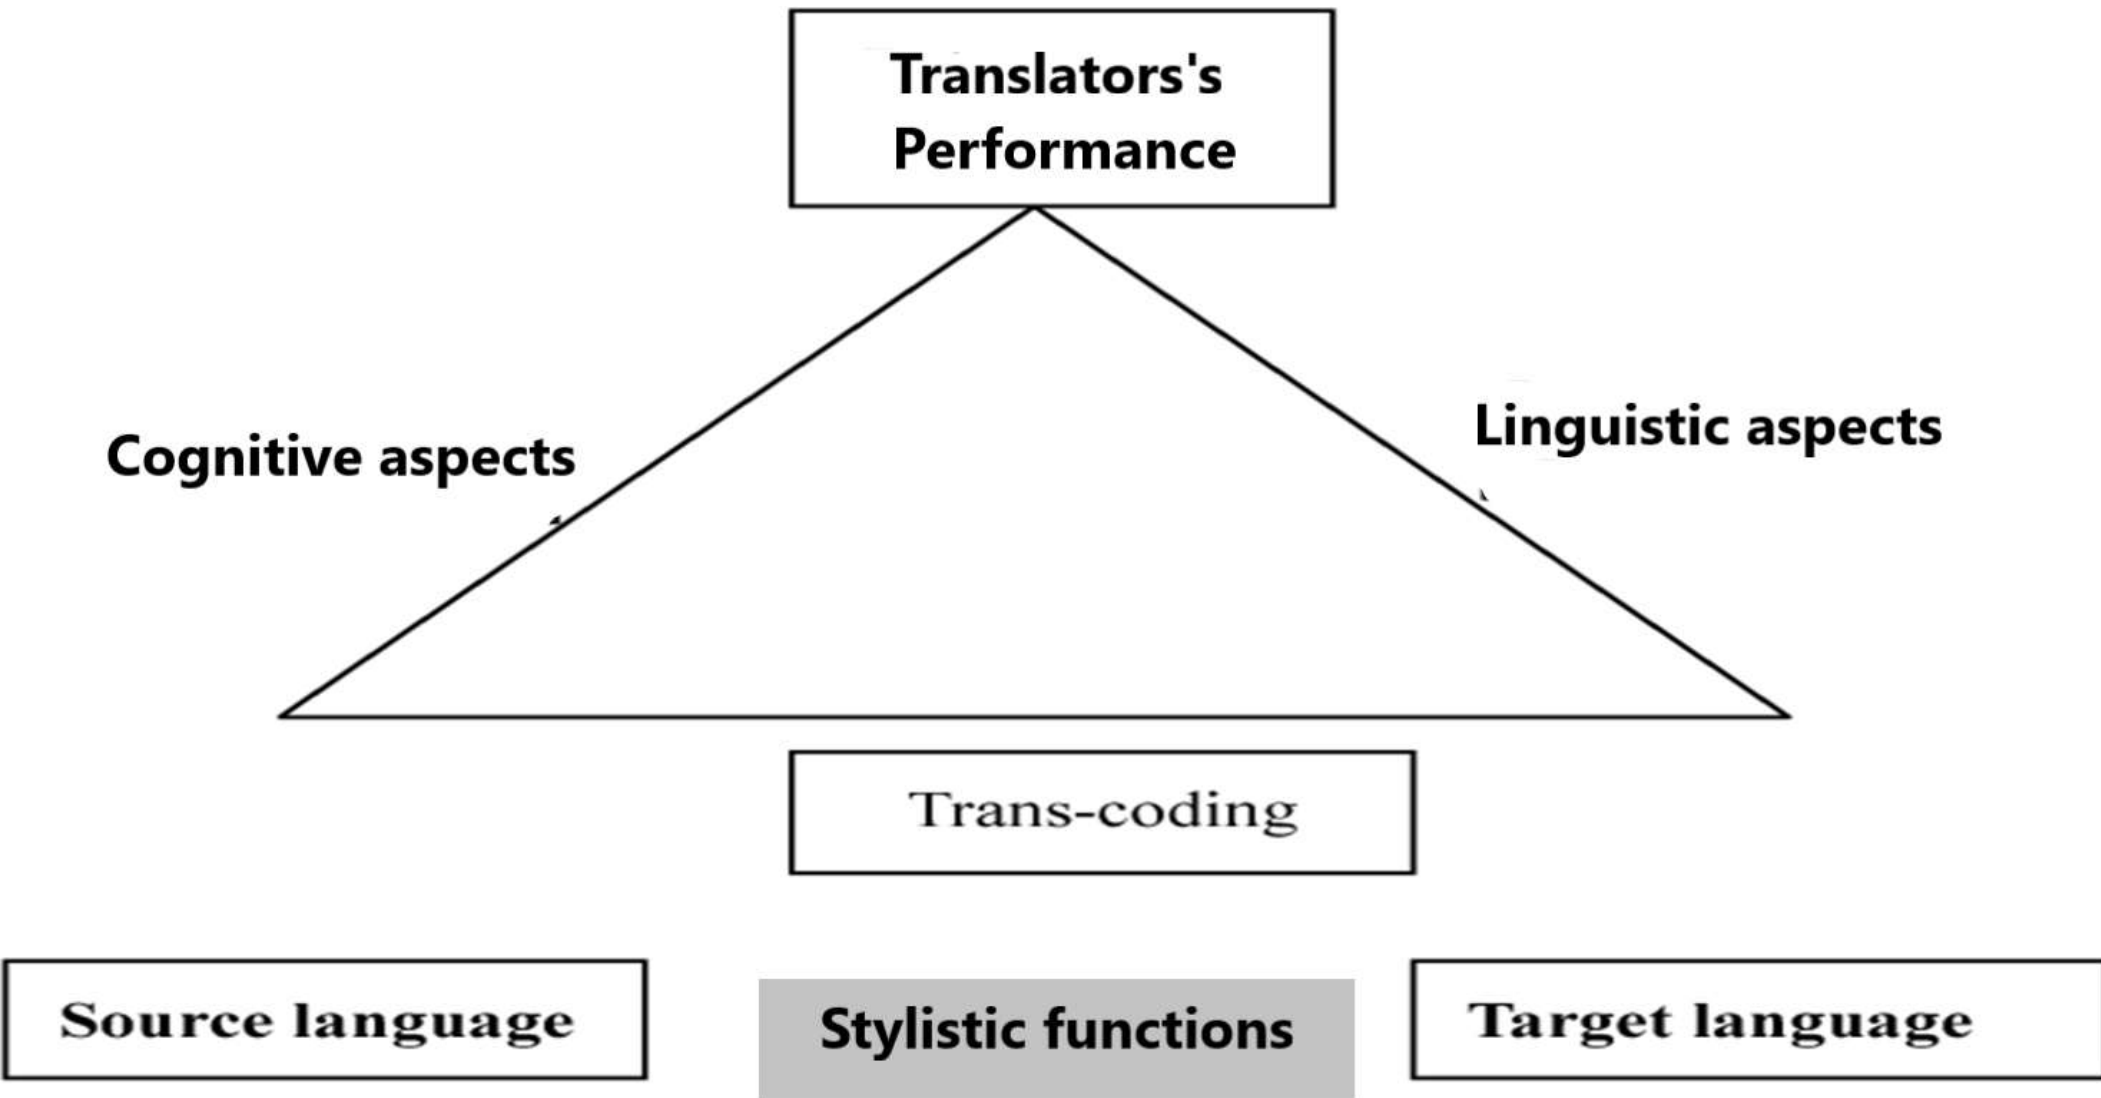

Figure 1

The stylistic detective can then present the linguistic data acquired by

systematic investigation, and can offer a plausible and relatively
objective interpretation of cognitive stylistic evaluation.

In this way, stylistics encourages literary criticism to be
about more than just opinions. It is a kind of linguistic-
forensic, literary discourse criticism.

Stylistics and language learning (pedagogy)

Today's stylistics is often context- and discourse-based (Verdonk, 2002; Simpson, 2004), concentrating on questions of style, register, genre, culture, and identity choices in a variety of situations. It also focuses on the learning pyramid

The concept of language learning is one of "appropriation" or "participation," where learners attempt, frequently under challenging conditions, to make use of the resources or "affordances" that previous language uses for their own evolving communicative purposes, as demonstrated by Kramsch (2000). See the following learning pyramid:

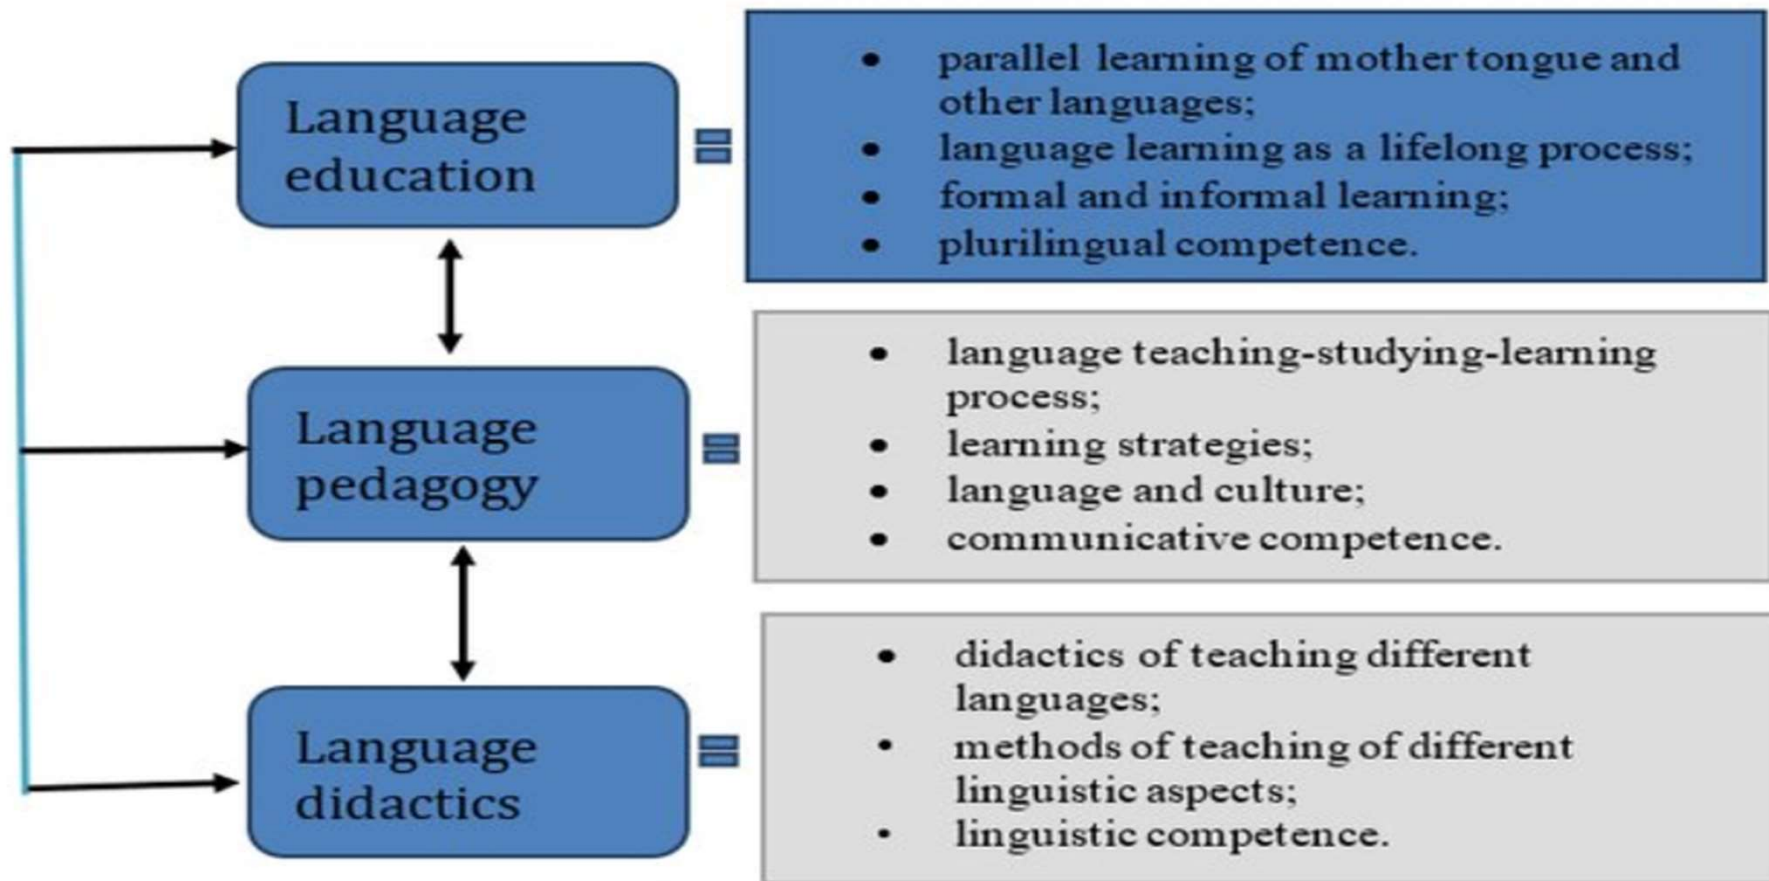

Learning Pyramid

Source: National Training Laboratories, Bethel, Maine

There is an empirical information about the contribution stylistics in relation to

the literary, cultural, and general language education. See the following figure about the level of teaching in terms of stylistic functions of language

Why use stylistics in second language contexts?

In second and foreign language contexts, the use of literary texts is frequently encouraged as a way to improve reading comprehension, vocabulary development, and cultural awareness. In more traditional systems, the appreciation of the literary classics is seen as the pinnacle of that language and civilization.

Macro Systems

Linguistic and
other semiotic
forms

Tools,
materials,
resources

Evidence of L2/multilingual development, social
integration/participation, trajectories?

Agents of
socialization

Situated
cognition

Socialization processes

Time

Sociocultural
activity,
mediation,
affordances

e.g.:

- Foodways
- Respect
- Hierarchy
- Empathy
- Morality
- Scientific (or legal, academic) discourse
- Narrativity, genres
- Identities
- Affective stances
- Ideologies (etc.)...

Cultural knowledge

Do stylistic approaches promote language learning?

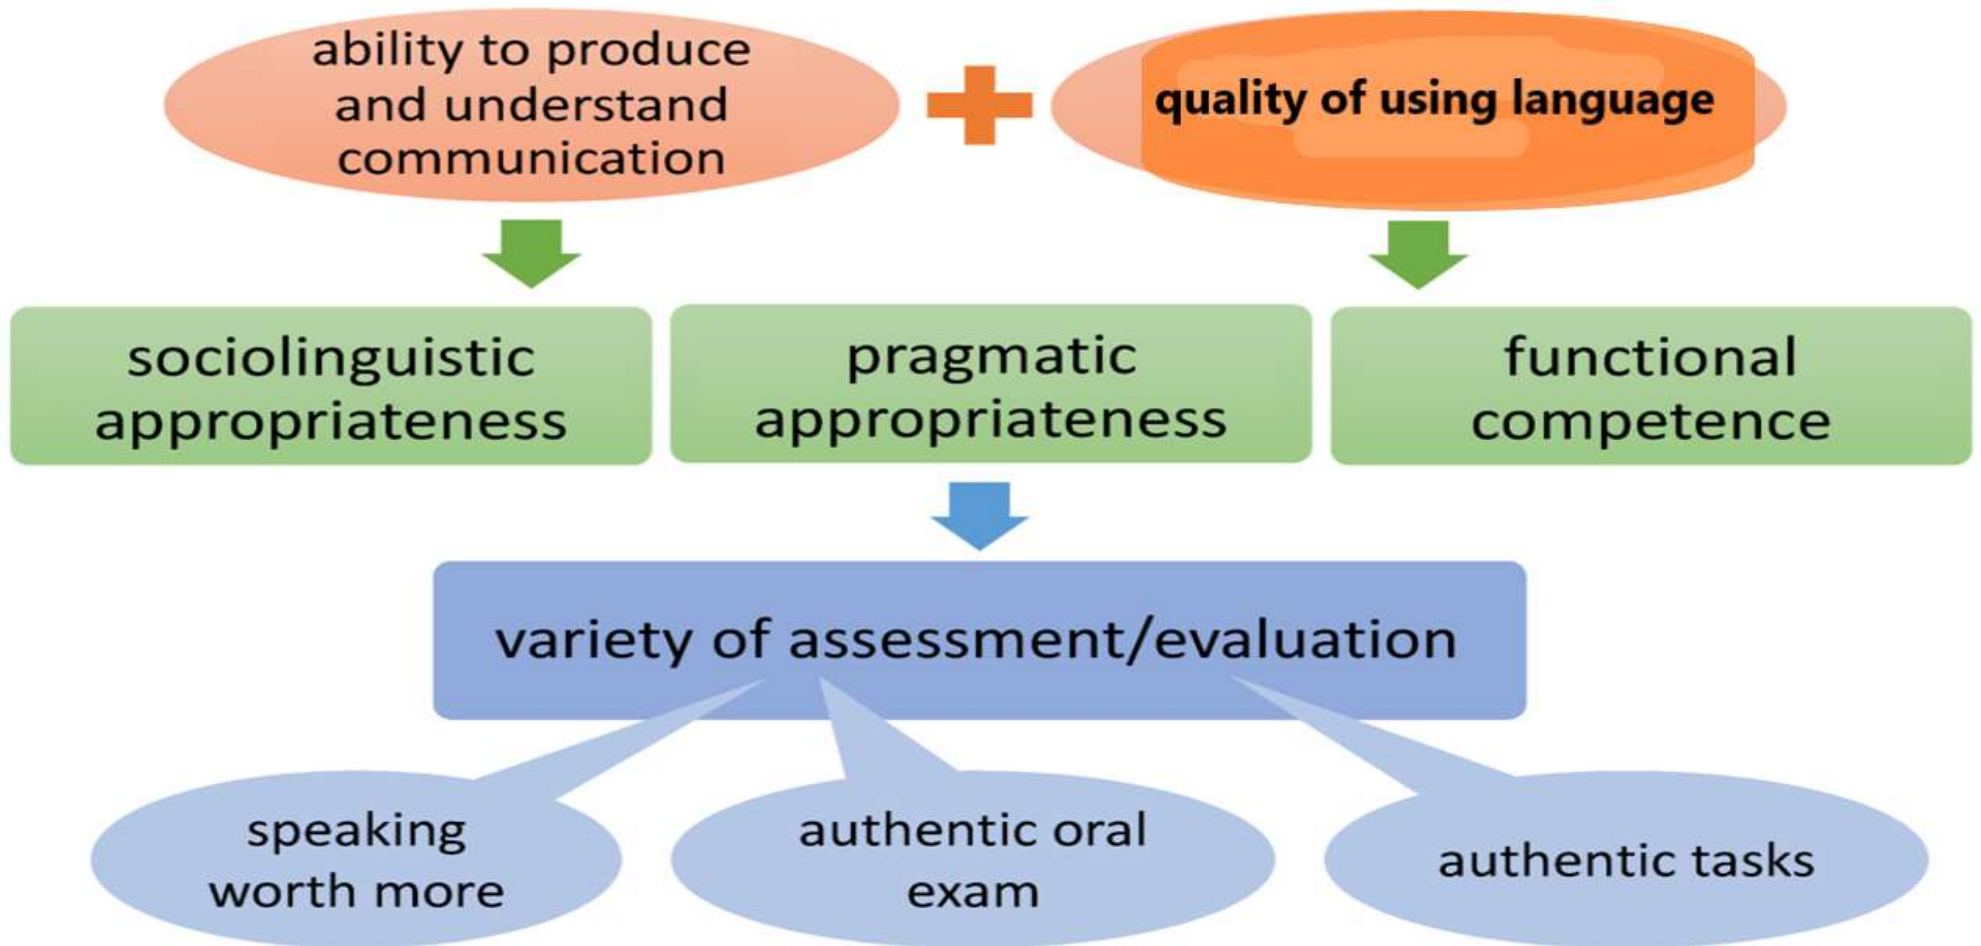

Edmondson (1997) asserts that the topic is often defined by 4 Stylistics in Second Language Contexts: conjecture, assertion, and counter-assertion in a well-known study on the use of literature in language instruction.

It would seem self-evident that language learners may
acquire a lot from closely examining the language of texts
with a variety of linguistic evaluation and assessment.

See the following:

Assessment/Evaluation

Textual – Reader's knowledge of conventions

Context

Experiential –
Reader's engagement
or experience

Psychological –
Reader's cognitive or
subconscious
processes

Reader

Text

Social – Reader's
social role and
perceptions of the
social context

Cultural – Reader's
cultural role, attitudes,
contexts
