Conference Preamble

In a world where technological advancements are accelerating rapidly, artificial intelligence (AI) is emerging as a potent force, reshaping every aspect of our lives. This revolution, although it is holding tremendous prospects for progress, raises profound questions about the future of humanity and the role of the humanities and social sciences in guiding it toward a sustainable path.

Therefore, the College of Arts announces its annual conference under the theme "Humanities and Social Studies in the Era of Artificial Intelligence: Towards Realizing Sustainable Development Objectives." The conference aims to be a vibrant intellectual forum for discussion, bringing together an elite group of researchers and academics to discuss the intertwined relationship between technological progress and humanities and social issues.

We seek to investigate how artificial intelligence can support the Sustainable Development Objectives while addressing the ethical and social challenges it poses. The conference aims to enrich discussion, exchange expertise, and provide innovative insights that contribute to formulating policies and practices that ensure AI is utilized as a tool to enhance human well-being, uphold human values, and build a more sustainable and prosperous future for all. We anticipate your insightful contributions.

Conference Objectives

1. To promote dialogue and create an effective forum for the exchange of knowledge and expertise among specialists in the fields of the humanities, sustainable development, and artificial intelligence.
2. To highlight the role of the humanities and social sciences, highlight the close connection between their two aspects, and document their role in keeping pace with the modernization of society's intellectual structures.
3. To integrate the disciplines of the humanities with artificial intelligence so as to create sustainable and innovative solutions to contemporary challenges.
4. To encourage and stimulate interdisciplinary research and studies that address the

intersections between these disciplines, and contribute to the development of new theoretical and applied frameworks.

5. To support development and highlight the role of the humanities and artificial intelligence in realizing sustainability and building more prosperous and inclusive societies.

6. To attempt to create an incubating environment for sociologists, historians, linguists, information and media specialists, and build partnerships, networks, and cooperation between academics, institutions, and stakeholders at the local and international levels to build sustainability based on digital development.
