اسم المادة	***Logical Design***
رمز المادة	**COMP١٠1**
نوع المادة	**اجباري قسم**
عدد الوحدات	**٣**
عدد الساعات	**٢ نظري + ٢ عملي**
وصف المقرر	This course presents the introductory concepts that are needed in order to design digital systems. Classical methods, including Boolean algebra, combinational and sequential logic design methods as well number systems will be presented. Additionally this course will present an introduction of the logical circuits such as AND, OR, NOR, and NAND gates and will introduce students to design combinational and sequential circuits using Kit board and circuit maker simulators in the Lab.
المنهج المقرر	***Syllabus*** 1. Number systems: Decimal system, Binary system, Octal system, Hexadecimal system. 2. Conversion between systems. 3. 1's and 2's complements 4. Subtraction using 1's and 2's complements. 5. Signed binary numbers. 6. Binary coded decimal (BCD). 7. Digital codes: Gray Code, Excess 3 code. 8. Logical gates AND | OR | NOT | NAND | NOR | XOR | XNOR 9. Boolean algebra. 10. Demorgan's theorems 11. Karnaugh Maps. 12. Combinational logical CKT1:Decoder, Encoder. 13. Multiplexer: De multiplexer – comparator. 14. Adders Half and Full, Subtractor Half and Full. 15. Sequential logic CKT1. 16. Flip – Flop: RS-ff, D-ff, T-ff, JK-ff. 17. Counters shift registers
Text books	1. Digital Design, Fourth Edition, M. Morris Mano, 2009. 2. Th. L. Floyd, Digital Fundamentals, Prentice Hall, 2003. 3. J F Wakerly, Digital Design, Prentice Hall, 2000.

This course is one of the basic courses in computer science, through which the student acquires basic knowledge of what is discrete structures and how to transform and formulate any application from a theoretical point of view to a set of symbols and variables through which software can be formulated to achieve the desired goal. Relating to objects such as data, variables and functions and their use in computer programming and algorithms.	وصف المقرر
Syllabus 1. Introduction to D.S. 2. Propositional logic. 3. Predicate definition. 4. Quantification and its types. 5. Logical equivalence. 6. Introduction to sets 7. Adjacency list and matrix. 8. Computing problems. 9. Pascal's triangle. 10. Sequences. 11. Relations. 12. Summation and product notation. 13.Graphs algorithms and their programming. 14.Trees defintion. 15. Correctness to algorithms. 16. Assigning meaning to programs (numeric expressions and program semantics). 17. Counting computer programs.	المنهج المقرر

This course provides a general introduction to computer programming focusing on the concepts of problem solving, basic programming constructs, and program design. It introduces how to design, write and test simple programs.	وصف المقرر
Syllabus 1. Programming Fundamentals – constructs • Basic syntax and semantics of a higher-level language • Variables, types, expressions, and assignment • Simple I/O • Conditional and iterative control structures • Methods (functions) and parameter passing • Structured decomposition 2. Programming Fundamentals – problem solving • Problem-solving strategies • The role of algorithms in the problem-solving process • Implementation strategies for algorithms 3. Programming Fundamentals – data structures • Representation of numeric data • Range, precision, and rounding errors • Arrays • Representation of character data • Strings and string processing	المنهج المقرر

This course has been designed with two goals. The first is to cover basic concepts on which the stored program digital computer is formulated. These include the functional units of a computer (hardware), the flow (buses) and storage (memory management) of information, The second goal is to provide students with a firm foundation for follow-on courses later in their program. In particular, the introduction to the Microprocessors and assembly language programming provides a basis for Computer Architecture.	وصف المقرر
Syllabus 1. Processor and its Architecture. 2. Memory Hierarchy. 3. System Bus, I/O and storage topics. 4. Introduction to Microprocessors and Microcomputers. 5. Software architecture of 8088/8086 microprocessors, 6. Instruction set architecture, Addressing mode. 7. Architecture of the Intel 8086 based microprocessors. 8. Micro assembler programming techniques involving building. 9. Incorporating and maintaining libraries using assembler speedups and directives.	المنهج المقرر

The student will learn the low-level programming model of microprocessor based on digital systems. They will study and analyse the basic concepts related to the low-level programming resources and integration of programs developed as a low-level (assembly). The different programming strategies of input/output subsystem resources will be analysed. This is complemented with the study and analysis of the buses and input/ output computer interfaces. The Intel 80x86 microprocessor family will be used to get the particularization of all the theoretical concepts. The course involves a practical part where the student becomes familiar with the development tools and debugging of programs written in low-level languages. However settle the knowledge through the design and implementation of small programs in assembly language.	وصف المقرر
Syllabus 1- Arithmetic Logic Unit (ALU): Introduction, Arithmetic Circuits, ALU, Number Systems 2. Microprocessor I (8086): Instruction Data Set. Machine Language Introduction, Assembly Language, Machine Language Programming, Addressing Modes, Compiling, Assembling, and Loading. 3. Microprocessor II (8x86 family): Control and Datapath Design. Single-Cycle Processor Introduction, Performance Analysis, Single-Cycle Processor. 4. Microprocessor III: Control and Datapath Design. Multi-cycle Processor Introduction, Performance Analysis, Multi-cycle Processor, Pipelined Processor 5. Memory systems and I/O. Introduction, Memory System, Caches, Virtual Memory, Memory-Mapped I/O, Memory map, I/O Devices, Buses and organization.	المنهج المقرر

Multimedia System	**اسم المادة**
COMP252	**رمز المادة**
اختياري قسم	**نوع المادة**
٣	**عدد الوحدات**
٢ نظري + ٢ عملي	**عدد الساعات**
The course aims at providing students with fundamental concepts and the technology associated with multimedia. The course covers contemporary, interactive multimedia technology systems, focusing on types, applications, and theories of operation. Basic technologies such as multimedia data representation, compression, retrieval and communication will be covered in an integrated manner. On the completion of the course, students should be able to understand the fundamental concepts and make critique to the technologies associated with various multimedia data types such as image, video, audio, graphics and animation.	**وصف المقرر**
Syllabus 1. Introduction: definition, Applications, Computer-Based Training and Teaching Aid, References, Entertainment, Simulation, Virtual Reality, Advantages of Multimedia. 2. The Basic Elements of Multimedia: Text , Graphic. 3. Graphics Categories: Animation, Video, Audio. 4. Categorization: Two types of Multimedia presentation (Linear Presentation, Non-linear Interactive, Hypermedia. 5. Technologies and Interfaces: Media Technologies (Text, Graphics, Images, Animation, Video, Audio). 6. Interaction Style and Modalities (Sight, Sound, Touch), Multimodal Transput (I/O) Technologies (Haptic, Audio, Visual, Motion). 7. Windowing and User Interfaces.	**المنهج المقرر**

Distributed DataBase	اسم المادة
COMP٤٥١	رمز المادة
اختياري قسم	نوع المادة
٣	عدد الوحدات
٢ نظري + ٢ عملي	عدد الساعات
This course is designed to give the reader an understanding of Distributed Database (DDB). DDB is a database in which not all storage devices are attached to a common processor. It may be stored in multiple computers, located in the same physical location; or may be dispersed over a network of interconnected computers. Unlike parallel systems, in which the processors are tightly coupled and constitute a single database system, a distributed database system consists of loosely coupled sites that share no physical components. In this course we are looking for the principles of DDB, promises and challenges, and discuss how can we take advantages of DDB in some practical applications.	وصف المقرر
Syllabus 1. Introduction 2. Transaction management 3. Atomicity of distributed transactions 4. Concurrency control for distributed transactions 5. Architecture aspects of distributed transactions 6. Fragmentation 7. Reliability in distributed database 8. Inconsistency in distributed database 9. Query optimisation for distributed database.	المنهج المقرر
1. Principles of distributed database systems, Third edition, M. Tamer Ozsu, Patrick Valduriez, 2009. 2. Distributed database system, Chhanda Ray, 2009. 3. Distributed database management system a practical approach, Saeed K. Rahimi and Frank S. Haug, 2010.	***Text books***
