# **Academic Program and Course Description Guide 2024-2025**

## Academic Program Description Form

University Name: University of Mosul

Faculty /Institute: Collage of Computer Science and Mathematics

Scientific Department: Department of Software

Academic or Professional Program Name: Bachelor Science in Software

Final Certificate Name: Bachelor Science in Software

Academic System: Bologna Process and Courses System

Description Preparation date: 3/12/2024

File Completion Date: 8/12/2024

Signature

Head of Department Name:

Asst. Prof Dr.Naktal Moaid Edan

Date: 5/1/2025

The file is checked by:

Department of Quality Assurance and University Performance

Director of the Quality Assurance and University Performance Department

Date: 7/1/2025

Signature:

Dr. Ibrahim Muhmmad Ahmed

Signature

Scientific Associate Name:

Prof Dr. Safwan Omar Hasoon

Date: 7/1/2025

Approval of the Dean

Prof.Dr. Dhuha Basheer Abdullah

7/1/2025

## Academic Program Description Template

### Performance Review of Higher Education Institutions (Academic Program Review)

#### Academic Program Description

The Academic Program Description provides a concise overview of the program's key features and the expected learning outcomes that students are anticipated to achieve, demonstrating whether they have effectively utilized the available learning opportunities. The description is accompanied by detailed information for each course within the program.

1.	Educational Institution	College of Computer Science and Mathematics / University of Mosul
2.	Department / Centre	College of Computer Science and Mathematics / Department of Software Sciences
3.	Name of the Academic Program	Bachelor of Science in Software Sciences
4.	Name of the Final Degree	Bachelor
5.	Study system	Credit Hour System + Bologna System
6.	Accredited Accreditation Program	Academic Accreditation
7.	Other External Influences	
8.	Centralized Examinations	
9.	Date of Description Preparation	

1.	<p><b>Academic Program Objectives</b></p> <ol style="list-style-type: none"><li>1. To prepare specialized cadres capable of fulfilling the requirements of the labour market in both the public and private sectors within the fields of Software Engineering and Information Technology, through diversification of learning and teaching methods, and training students to apply acquired knowledge and skills to solve real-world problems.</li><li>2. To create a conducive environment that enables students to apply their knowledge and skills in identifying community needs and issues, as well as social matters related to Software Engineering and Information Technology.</li><li>3. To provide distinguished academic programs in the field of Software Engineering, combining theoretical and practical applications, in accordance with academic quality standards, and addressing labour market needs.</li><li>4. To encourage and promote scientific research in the fields of Software Engineering and Information Technology.</li><li>5. To establish a stimulating environment for faculty members to develop their educational and research skills.</li></ol>
----	---

	<b>6. To build and develop partnerships with governmental, private, and community sectors, along with various institutions within society.</b>
<b>2.</b>	<b>Intended learning outcomes, teaching and learning methods, and assessment</b>
<b>A.</b>	<b>Knowledge and Understanding</b> <ol style="list-style-type: none"> <li>1. The student learns programming languages.</li> <li>2. The ability to develop scientific solutions to societal problems through programming.</li> <li>3. Developing the student's skills in building intelligent systems based on analysis and inference.</li> <li>4. Providing the student with the foundational principles of constructing software systems based on software engineering fundamentals.</li> <li>5. Enhancing the student's knowledge of the fundamentals of implementing software systems by understanding computer mechanisms</li> </ol>
<b>B.</b>	<b>Subject-Specific Skills</b> <ol style="list-style-type: none"> <li>1. Theoretical</li> <li>2. Practical</li> <li>3. Summer Training</li> <li>4. Graduation Research</li> </ol>
<b>C.</b>	<b>Teaching and Learning Methods</b> <ol style="list-style-type: none"> <li>1. Traditional blackboard</li> <li>2. Interactive whiteboard</li> <li>3. Data projector</li> </ol>
<b>D.</b>	<b>Assessment Methods</b> <ol style="list-style-type: none"> <li>1. Centralized and monthly examinations</li> <li>2. Daily quizzes</li> <li>3. Scientific reports</li> <li>4. Practical examinations</li> <li>5. Research projects</li> </ol>
<b>E.</b>	<b>Thinking Skills</b> <ol style="list-style-type: none"> <li>1. Deduction and analysis skills</li> <li>2. Comparative skills</li> <li>3. Discussion skills</li> <li>4. Computer and internet usage</li> <li>5. Research and investigation</li> <li>6. Conducting research and drawing conclusions</li> <li>7. Decision-making</li> </ol>
<b>F.</b>	<b>Teaching and Learning Methods</b> <ol style="list-style-type: none"> <li>1. Theoretical lectures</li> <li>2. Practical laboratories</li> <li>3. Research and investigation</li> <li>4. Discussion groups within practical sessions</li> </ol>
<b>G.</b>	<b>Assessment Methods</b> <ol style="list-style-type: none"> <li>1. Written examinations</li> <li>2. Research projects</li> <li>3. Summer course discussions</li> <li>4. Evaluation of assignments and discussions</li> </ol>

	<b>5. Assessment of individual and group research</b>
<b>H.</b>	<b>General and Transferable Skills (Other Skills Related to Employability and Personal Development)</b> <ol style="list-style-type: none"> <li>1. Developing the ability to work effectively in teams</li> <li>2. Developing self-directed learning skills</li> <li>3. Enhancing the ability to present and discuss ideas</li> <li>4. Developing systematic problem-solving skills</li> </ol>
<b>I.</b>	<b>Teaching and Learning Methods</b> <ol style="list-style-type: none"> <li>1. Cooperative learning</li> <li>2. Group discussions</li> <li>3. Individualized instruction</li> <li>4. Lectures, laboratory experiments, practical applications, homework assignments, and scientific discussions</li> </ol>
<b>J.</b>	<b>Assessment Methods</b> <ol style="list-style-type: none"> <li>1. Observing student interactions in various contexts</li> <li>2. Presenting real-world issues/problems and evaluating students' programming-based approaches</li> <li>3. Evaluating group and individual work</li> <li>4. Addressing summer training challenges through graduation projects</li> </ol>

<b>Certifications and module Hours</b>	
--	--

<b>Planning for Personal Development</b> <ol style="list-style-type: none"> <li>1. Through student scientific conferences</li> <li>2. Departmental seasonal scientific seminars</li> <li>3. Faculty discussion circles</li> <li>4. Research circles</li> </ol>
<b><u>Centralized Admission through the Ministry of Higher Education and Scientific Research:</u></b> According to the regulations set by the Ministry of Higher Education and through the centralized admission system, based on the approved admission criteria determined by the university and college according to the student's preference for applying to the department.
<b>Key Program Information Resources:</b> <ul style="list-style-type: none"> <li>• Curriculum textbooks</li> <li>• Faculty lectures</li> </ul>

Ministry of Higher Education and Scientific Research

College of Computer Science and Mathematics - Department of Software Curricula

Bologna System (bachelor's 2023-2024)

Module Title	Computer Organization (1)
Module Code	CMSWU1102
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<ol style="list-style-type: none"> <li>1. Understanding Digital Systems: Learn and understand the core principles of digital systems and how they function.</li> <li>2. Binary Logic Mastery: Gain a clear understanding of binary logic and how it forms the basis for digital computing and design.</li> <li>3. Comprehension of Logic Gates: Understand the functioning of basic logic gates (AND, OR, NOT) and more complex gates (NAND, NOR, XOR, XNOR), as well as how to combine these gates to create digital circuits.</li> <li>4. Boolean Algebra Proficiency: Develop a strong understanding of Boolean algebra, including how to simplify Boolean expressions and how these expressions are used in logic design.</li> <li>5. Sequential and Combinational Logic: Learn the difference between sequential and combinational logic, and how to design circuits using each type of logic.</li> <li>6. Logic Minimization Techniques: Understand and apply logic minimization techniques, such as Karnaugh maps and Quine-McCluskey method, to simplify logic designs.</li> </ol>
Material Covered	<ol style="list-style-type: none"> <li>1. Numbering systems_1 (Decimal, Binary, Octal and Hexadecimal)</li> <li>2. Numbering systems_2 (Decimal, Binary, Octal and Hexadecimal)</li> <li>3. Base conversion (Decimal, Binary, Octal and Hexadecimal)</li> <li>4. Base conversion (Gray code)</li> <li>5. Base conversion (BCD, EX-3, 2421)</li> <li>6. Arithmetic Operation (Addition)</li> <li>7. Arithmetic Operation (Subtraction: Normal, 1's complement, 2's complement)</li> <li>8. Arithmetic Operation (Multiplication)</li> <li>9. Arithmetic Operation (Division)</li> <li>10. Basic logic gates_1</li> <li>11. Basic logic gates_2</li> <li>12. Logic circuit simplification using Boolean algebra_1</li> <li>13. Logic circuit simplification using Boolean algebra_2</li> <li>14. Logic circuit simplification using Karnaugh map_1</li> <li>15. Logic circuit simplification using Karnaugh map_2</li> </ol>
Required Texts	<p>M. M. Mano, 2016, "Digital Design", Prentice Hall</p> <p>Thomas I. Floyd, 2006, "Digital Fundamentals", Prentice Hall</p>

## College of Computer Science and Mathematics - Department of Software Curricula

### Bologna System (bachelor's 2023-2024)

Module Title	Computer Applications (1)
Module Code	CMSWU1103
Module Type	Core
Module Hours	2
Module Hours	2
<b>Module Objectives</b>	<ol style="list-style-type: none"> <li>1. Understand the two essential components of a computer system: hardware and software.</li> <li>2. Gain knowledge about different hardware components, including input and output devices, storage devices, CPU, motherboard, and RAM.</li> <li>3. Comprehend the role of software in computer operation, distinguishing between system software and application software.</li> <li>4. Learn how hardware components work together to process data and execute software instructions.</li> <li>5. Gain proficiency in basic file and folder operations such as renaming files, copying and pasting files, sorting files, searching for files, and organizing files in folders and subfolders.</li> <li>6. Learn how to format a removable device.</li> <li>7. Understand the concepts of the Internet, World Wide Web (WWW), and email.</li> <li>8. Gain knowledge about different types of computer networks and their significance in the development of the Internet.</li> <li>9. Explore the history of computer networks and how they evolved to become popularly known as the Internet and the Web.</li> <li>10. Familiarize students with web browsers, their tools, and search engines for effective web browsing and information retrieval.</li> <li>11.</li> </ol>
<b>Material Covered</b>	<ol style="list-style-type: none"> <li>1. Understand the two essential components of a computer system: hardware and software.</li> <li>2. Gain knowledge about different hardware components, including input and output devices, storage devices, CPU, motherboard, and RAM.</li> <li>3. Learn how hardware components work together to process data and execute software instructions.</li> <li>5. Gain proficiency in basic file and folder operations such as renaming files, copying and pasting files, sorting files, searching for files, and organizing files in folders and subfolders.</li> <li>6. Learn how to format a removable device.</li> <li>7. Understand the concepts of the Internet, World Wide Web (WWW), and email.</li> <li>8. Gain knowledge about different types of computer networks and their significance in the development of the Internet.</li> <li>9. Explore the history of computer networks and how they evolved to become popularly known as the Internet and the Web.</li> </ol>
<b>Required Texts</b>	<ul style="list-style-type: none"> <li>• "Computer Organization and Design" by David A. Patterson and John L. Hennessy</li> </ul>

- Computer Architecture: A Quantitative Approach" by John Hennessy and David A. Patterson

## College of Computer Science and Mathematics - Department of Software Curricula

### Bologna System (bachelor's 2023-2024)

Module Title	Mathematics
Module Code	CMSWU1104
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<ol style="list-style-type: none"> <li>1. Provide the basic base for the elementary types of coordinates and applications.</li> <li>2. Integration of algebraic functions and transcendental functions and the application of integrals to solve problems of mathematics, engineering and physics.</li> <li>3. The student learned matrices and learned the properties of matrices</li> <li>4. The student's ability to calculate a system of equations using matrices</li> <li>5. Learn sequences and series.</li> </ol>
Material Covered	<ol style="list-style-type: none"> <li>1. Integration: Introduction of Integrations, Types of integrations, Integrations of special functions, such as:</li> <li>2. Algebraic functions, ceiling and floor functions.</li> <li>3. Trigonometric functions, Natural logarithm function, Exponential function, Exponential and Logarithmic function bases other than e.</li> <li>4. Hyperbolic functions, Inverse of trigonometric functions, Inverse of hyperbolic functions.</li> <li>5. Techniques of integration: Integration using substitution, Integration by parts, Integration of Trigonometric (power, product).</li> <li>6. Trigonometric substitutions, Rational functions and partial fractions.</li> <li>7. Rationalizing substitutions, Integration of rational function in sine and cosine, Integral by hyperbolic substitution.</li> <li>8. Mid-term Exam + Improper Integral, Comparison test for improper Integrals, King property integration.</li> <li>9. Applications of integration: Definition of Areas and types of areas, Definition Volumes, Types of volumes.</li> <li>10. Matrices</li> <li>11. Properties of matrices and finding the determinant</li> <li>12. inverse of the matrix</li> <li>13. System of linear equations using matrices.</li> <li>14. Maclaurin polynomial</li> <li>15. Introduction about Sequences, formula of sequences, types of sequences</li> <li>16. Introduction of polynomials, Maclaurin polynomial, Taylor polynomial.</li> <li>17. Preparatory week before the final Exam</li> </ol>
Required Texts	<ul style="list-style-type: none"> <li>• THOMAS' CALCULUS, 4th edition, 2018</li> <li>• BY: GEORGE B. THOMAS, JR., JOEL HASS, CHRISTOPHER HEIL and MAURICE D. WEIR</li> <li>• CALCULUS, 9<sup>th</sup> edition, 2020</li> <li>• BY: JAMES STEWART, DANIEL CLEGG and SALEEM WATSON.</li> </ul>

## College of Computer Science and Mathematics - Department of Software Curricula

### Bologna System (bachelor's 2023-2024)

Module Title	Discrete structures
Module Code	CMSWU1105
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<ol style="list-style-type: none"> <li>1. The course aims to study discrete structures in terms of the use of algebraic laws.</li> <li>2. Charts and shapes</li> <li>3. To reach an easy and clear way for students</li> <li>4. To solve all material issues related to discontinuous structures.</li> <li>5. In addition to studying quantifiers and predicates logic</li> <li>6. Studying the different groups, theories and schemes so that the student can solve the duties required of him and the exercises with simplicity, ease and clarity.</li> </ol>
Material Covered	<ol style="list-style-type: none"> <li>1. Definition to discrete structure</li> <li>2. Biconditional statement, Type of statements</li> <li>3. Algebra propositions</li> <li>4. Laws of Algebra propositions</li> <li>5. Define of Predicates logic</li> <li>6. Define quantifiers and examples</li> <li>7. Sets theory</li> <li>8. Type of set operation</li> <li>9. Venn diagram in detail</li> <li>10. Laws of set operation and type</li> <li>11. Define of Cartesian product</li> <li>12. types of relations</li> <li>13. Graphs of relation, construct the relation</li> <li>14. How to solve laws of relations</li> <li>15. Other approaches to computability</li> <li>16. Preparatory week before the final Exam</li> </ol>
Required Texts	Discrete Mathematics and Its Applications_7th_Edition

## College of Computer Science and Mathematics - Department of Software Curricula

### Bologna System (bachelor's 2023-2024)

Module Title	Algorithms and Structured Programming using C (1)
Module Code	CMSWU1106
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<ol style="list-style-type: none"> <li>1. To develop problem solving skills and understanding of programing through the application of instruction.</li> <li>2. To understand input, output instruction.</li> <li>3. This course deals with the basic operation in any program code.</li> <li>4. This is the basic subject for all programs.</li> <li>5. To understand how to analysis any problem to solve it by programs.</li> <li>6. To perform as a good programmer.</li> </ol>
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction - simple sequential flowchart</li> <li>2. branched flowchart</li> <li>3. Identifier names, variables and data types</li> <li>4. Input and output statements</li> <li>5. Operators (arithmetic, relational and logical)</li> <li>6. precedence of operator</li> <li>7. The control statements (first type)</li> <li>8. Nested control statement</li> <li>9. The control statements (second type)</li> <li>10. Looping, for (first type)</li> <li>11. Looping, while (second type)</li> <li>12. Looping, do.... While (third type)</li> <li>13. Nested loops</li> <li>14. Statement working with loop</li> <li>15. Functions (Simple function)</li> </ol>
Required Texts	C++ from control structures through objects, eighth edition, by Tony Gaddis

## College of Computer Science and Mathematics - Department of Software Curricula

### Bologna System (bachelor's 2023-2024)

Module Title	English Language
Module Code	CMSWU1201
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<ol style="list-style-type: none"> <li>1. To Develop English skills by listening and writing .</li> <li>2. Learning English and conversation training</li> <li>3. Conversations in English in the field of computers (Information Technology).</li> <li>4. The student receives all the information about the computer and at the same time learns and trains the correct pronunciation in this language.</li> <li>5. Conversations between students about everything related to Information Technology.</li> </ol>
Material Covered	<ol style="list-style-type: none"> <li>1. Working in the IT industry/ meeting people+ listen, language and vocabulary.</li> <li>2. Working in the IT industry/ Jobs in IT+ listen, reading, writing, speaking and vocabulary.</li> <li>3. Working in the IT industry/ Schedules + listen, reading, writing, speaking and vocabulary.</li> <li>4. Working in the IT industry/ Spelling + listen, reading, writing, speaking and vocabulary.</li> <li>5. Computer systems / computer hardware + listen, reading, writing, speaking and vocabulary.</li> <li>6. Computer systems / computer Software + listen, reading, writing and vocabulary.</li> <li>7. Computer systems / work with computers + listen, reading, writing, speaking and vocabulary.</li> <li>8. Computer systems / computer usage + listen, reading, writing, speaking and vocabulary.</li> <li>9. Website purpose/ talk about website + listen, reading, writing, speaking and vocabulary.</li> <li>10. Website analytics/ Getting information about websites + listen, reading, speaking and vocabulary.</li> <li>11. Website development / Developing a website + listen, reading, writing, speaking and vocabulary.</li> <li>12. Database basics / Understanding database products + listen, writing, speaking and vocabulary.</li> <li>13. Data processing / describing data processing steps + listen, reading, speaking and vocabulary.</li> <li>14. Data storage and back-up / talking about data storage and devices + listen, reading and writing.</li> <li>15. Database systems benefits / using data in company departments + listen, speaking and vocabulary.</li> <li>16. Preparatory week before the final Exam</li> </ol>
Required Texts	English for information technology , 1 vocational English, course book, Maja Olejniczak, series editor David Bonamy.

**College of Computer Science and Mathematics - Department of Software Curricula**  
**Bologna System (bachelor's 2023-2024)**

Module Title	Computer Organization (2)
Module Code	CMSWU1202
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<p>6. Design and Analysis: Gain the ability to design and analyze various types of digital circuits, including adders, multiplexers, decoders, memory units, and more.</p> <p>7. Understanding of Flip Flops and Memory Elements: Develop a comprehension of various types of flip-flops and memory elements and understand their use in creating larger systems such as registers and counters.</p> <p>8. Problem-Solving Skills: Enhance problem-solving skills, critical thinking, and creativity in the context of digital logic design.</p>
Material Covered	<p>17. Digital logic design circuits - 1</p> <p>18. Digital logic design circuits - 2</p> <p>19. Arithmetic circuits (Adders)</p> <p>20. Arithmetic circuits (Subtractors)</p> <p>21. Arithmetic circuits (Multiplication)</p> <p>22. Comparators</p> <p>23. Digital logic design circuits using arithmetic components</p> <p>24. Decoders</p> <p>25. Encoders</p> <p>26. Multiplexers</p> <p>27. De-Multiplexers</p> <p>28. Latches and Flip Flops - 1</p> <p>29. Latches and Flip Flops - 2</p> <p>30. Asynchronous counters</p> <p>31. synchronous counters</p>
Required Texts	<p>M. M. Mano, 2016, "Digital Design", Prentice Hall</p> <p>Thomas I. Floyd, 2006, "Digital Fundamentals", Prentice Hall</p>

Required Texts	C++ from control structures through objects, eighth edition , by Tony Gaddis

## College of Computer Science and Mathematics - Department of Software Curricula

### Bologna System (bachelor's 2023-2024)

Module Title	Introduction to Software Engineering (1)
Module Code	CMSWU2102
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<ol style="list-style-type: none"> <li>1. Defining what software engineering is and its special terminology in this field.</li> <li>2. Study of software development life cycle models with their advantages and disadvantages.</li> <li>3. Focus on the requirements-gathering stage.</li> </ol>
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction – What is Software engineering</li> <li>2. Software engineering terminology, its importance, and its difference from other engineering sciences</li> <li>3. Software Application</li> <li>4. Goals of Software Engineering and The Process Framework</li> <li>5. Software Development Life Cycle (SDLC) Models</li> <li>6. Exam 1</li> <li>7. Software Project Management</li> <li>8. Resources and Software Risks</li> <li>9. Software Project Estimation</li> <li>10. Project Scheduling</li> <li>11. Exam2</li> <li>12. Requirement Engineering</li> <li>13. Requirement Modeling Approaches</li> <li>14. Software Requirement Specification (SRS)</li> <li>15. An Example of (SRS)</li> </ol>
Required Texts	<ul style="list-style-type: none"> <li>• Roger, S. Pressman, and R. Maxin Bruce. Software engineering: a practitioner's approach. McGraw-Hill Education, 2019.</li> <li>• Mall, Rajib. Fundamentals of software engineering. PHI Learning Pvt. Ltd., 2018.</li> </ul>

## College of Computer Science and Mathematics - Department of Software Curricula

### Bologna System (bachelor's 2023-2024)

Module Title	Object-Oriented Programming (1)
Module Code	CMSWU2103
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<ol style="list-style-type: none"> <li>1. How to write readable, reusable, and modular code.</li> <li>1. Fundamental object-oriented programming concept.</li> <li>2. Apply OOP concepts to your Python code.</li> <li>3. Promotes students to enhance their coding ability.</li> </ol>
Material Covered	<ol style="list-style-type: none"> <li>1. Introducing Programming Concepts</li> <li>2. Arithmetic, logic, and comparison Operations</li> <li>3. Introducing Lists, and control statements</li> <li>4. Dictionaries, Accessing, Adding and Modifying Values</li> <li>5. Functions (Defining Functions, Passing Arguments, Return Values)</li> <li>6. Functions, Modules, Bug Busting and Exceptions</li> <li>7. Classes and Objects (Creating and Using a Class)</li> <li>8. Classes and Objects (Inheritance)</li> <li>9. Classes and Objects (Examples on Class Inheritance)</li> <li>10. Classes and Objects (Importing Classes and Modules)</li> <li>11. Python Standard Library –Part 1</li> <li>12. Python Standard Library –Part 2</li> <li>13. Files and Exceptions</li> <li>14. Testing code (Testing Functions)</li> <li>15. Testing code (Testing Classes)</li> <li>16. Preparatory week before the final Exam</li> </ol>
Required Texts	<ul style="list-style-type: none"> <li>• How to Think Like a Computer Scientist: Learning with Python</li> <li>• Python Crash Course, 2nd Edition. Copyright © 2019 by Eric Matthes.</li> </ul>

**College of Computer Science and Mathematics - Department of Software Curricula**

**Bologna System (bachelor's 2023-2024)**

Module Title	Object-Oriented Programming (1)
Module Code	CMSWU2103
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<ol style="list-style-type: none"> <li>1. Reviewing the architecture and internal organization of the 8086 microprocessors, including registers, flags, and memory addressing modes.</li> <li>2. Learn about the structure and organization of instructions in the 8086 microprocessors, including instruction formats.</li> <li>3. Reviewing various addressing modes in the 8086 microprocessor and learning how to effectively access data from different memory locations.</li> <li>4. Develop a deep understanding of instruction encoding schemes for different instructions in the 8086 microprocessors.</li> <li>5. Acquire knowledge of two-pass assembler and one-pass assembler concepts and their role in software systems.</li> <li>6. Understand the purpose and role of a loader in the execution of computer programs.</li> <li>7. Learn about the different types of loaders and their functions.</li> <li>8. Familiarize Students with the basic concepts and terminology related to loaders.</li> <li>9. Gain a comprehensive understanding of absolute loaders and their operation.</li> </ol>
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction - Review about Signed &amp; Unsigned Numbers, Multiplication &amp; division, and Floating Point Numbers Representation</li> <li>2. Review about Register Addressing, Immediate Addressing and Memory Addressing.</li> <li>3. Three-Address Instructions, Two-Address Instructions, One-Address Instructions And Zero-Address Instructions</li> <li>4. Assembly language in _ASM blocks within C/C++-01</li> <li>5. Assembly language in _ASM blocks within C/C++-02</li> <li>6. Classification of instruction, and converting assembly language instructions into machine code-01</li> <li>7. Classification of instruction, and converting assembly language instructions into machine code-02</li> <li>8. Mid-term Exam-01</li> <li>9. One assembler algorithm supported with examples</li> <li>10. Two-pass assembler algorithm supported with examples</li> <li>11. Introduction to Loader, Absolute Loader, and Relocating Loader .</li> <li>12. Introduction to Linker: Linking Loader and Linkage Editor.</li> <li>13. Macro processor In Assembly Language</li> <li>14. Macro Operators.</li> <li>15. Mid-term Exam-02</li> <li>16. Preparatory week before the final Exam.</li> </ol>
Required Texts	<ul style="list-style-type: none"> <li>• The 8086 Microprocessor: Architecture, Programming, and Interfacing" by Kenneth Ayala.</li> <li>• The Intel Microprocessors: 8086/8088, 80186/80188, 80286, 80386, 80486, Pentium, Pentium Pro Processor, Pentium II,</li> </ul>

Pentium III, Pentium 4, and Core2 with 64-bit Ex

**Bologna System (bachelor's 2023-2024)**

Module Title	Numerical Methods
Module Code	CMSWU2107
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<p>The main objective is for the student to possess capabilities related to the knowledge and skills he acquires through the vocabulary of the theoretical scientific material and practical application. As the student, after completing the numerical methods course in the software section, will have, and learn about the numerical methods used in solving nonlinear equations, complementation, integration, and solving equations and their types. An ability to apply knowledge of computing and mathematics in the field of specialization and in the labor market.</p> <p>The possibility of analyzing problems, determining the appropriate computing requirements, and defining them in order to solve them. And have a distinguished style in designing, implementing and evaluating computer-based systems, processes, components or programs, to meet the required needs in the field of specialization and be able to work effectively in groups to achieve common goals and to serve the public or private sector, and investment companies.</p>
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction to Numerical methods &amp; least interval:</li> <li>2. Error Analysis: Absolute &amp; relative Error</li> <li>3. Truncation Error. &amp; relative Error</li> <li>4. The Solution of Non-Linear fun: Mid-point</li> <li>5. The Solution of Non-Linear fun: FP &amp; NR.</li> <li>6. The Solution of Non-Linear fun.</li> <li>7. The Solution of Linear System <math>AX=B</math>: direct method, Inverse of a Matrix Method</li> <li>8. The Solution of Linear System <math>AX=B</math>, d: Gauss Elimination Methods</li> <li>9. The Solution of Linear System <math>AX=B</math>, Iterative Method: Jacobi iterative Method</li> <li>10. Interpolation &amp; Extrapolation: Numerical Differentiation</li> <li>11. Interpolation Method: Lagrange Polynomial Method &amp; Inverse Interpolation Method</li> <li>12. Numerical Integration: Simpson &amp; Trapezoidal Rules</li> <li>13. Introduction to The Solution Of ordinary DE: The Solution Of DE: Euler's Method</li> <li>14. The Solution Of DE: Rung-Kutta Method</li> <li>15. Preparatory week before the final Exam</li> </ol>
Required Texts	<ul style="list-style-type: none"> <li>• MATLAB Programming for Numerical Analysis, copyright © 2014 by César Pérez López</li> <li>• Numerical Methods Using MATLAB®, third Edition, G.R. Lindfield &amp; J.E.T. Penny</li> </ul>

Module Title	Artificial Intelligence
Module Code	CMSWU3101
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	<p>The main purpose of the course is to provide basic knowledge to students so that they can understand what artificial intelligence is. We will study the basic knowledge to understand artificial intelligence. We will introduce some basic search algorithms to solve the problems; Knowledge representation and reasoning; pattern recognition; Fuzzy logic</p>
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction in AI</li> <li>2. Problem Solving</li> <li>3. Search Methods</li> <li>4. Search Methods</li> <li>5. stochastic methods</li> <li>6. Knowledge representation</li> <li>7. Predicate Logic</li> <li>8. Predicate Logic</li> <li>9. Semantic Networks</li> <li>10. Building control algorithms for state space search</li> <li>11. Production rules</li> <li>12. Frame and scripts</li> <li>13. Expert system</li> <li>14. nature language process</li> </ol>
Required Texts	•

## College of Computer Science and Mathematics - Department of Software Curricula

Module Hours	2
Module Hours	2
Module Objectives	Enabling the student to be able to design and develop web pages and learn about the languages and methods available for creating, dealing with and programming web pages.
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction</li> <li>2. What is an HTML file</li> <li>3. Attribute Attributes and how to use them</li> <li>4. Add elements to the page</li> <li>5. Introduction to the JavaScript language</li> <li>6. Properties</li> <li>7. Numbers, dates or languages and processing Texts</li> <li>8. Programming expressions</li> <li>9. Iterative Loops</li> <li>10. Expression and Operations</li> <li>11. Attributive Expressions</li> <li>12. Treatment Comparisons</li> <li>13. Use JavaScript</li> </ol>

## College of Computer Science and Mathematics - Department of Software Curricula

### Credit Hour System (bachelor's 2023-2024)

Module Title	Software fault tolerance
Module Code	CMSWU3205
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	The curriculum aims to make the student familiar with the basic concepts and definitions related to software fault tolerance by living with them. It aims to present the basic principles and methods used to achieve this tolerance and apply them correctly and at the required level according to the needs of the labor market
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction of Fault Tolerance</li> <li>2. Reliability &amp; Availability with Fault Tolerant Systems</li> <li>3. Fault, Error, and Failure</li> <li>4. Dependable Fault-tolerant Systems</li> <li>5. Fault -tolerance scope of systems</li> <li>6. Failures and Failure Modes</li> <li>7. Faults and Fault Classes</li> <li>8. Fault-Tolerance Techniques</li> <li>9. Error recovery</li> <li>10. Types of Redundancy for Software Fault Tolerance</li> <li>11. Redundancy Software</li> <li>12. Redundancy Information</li> <li>13. Validation of Fault-Tolerance</li> <li>14. Fault Tolerance Tools</li> <li>15. Criteria for fault-tolerant design</li> </ol>
Required Texts	•

**College of Computer Science and Mathematics - Department of Software Curricula**

**Credit Hour System (bachelor's 2023-2024)**

Module Title	Operating systems
Module Code	CMSWU3206
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	Learn about operating systems, their functions, and how they work
Material Covered	<ol style="list-style-type: none"> <li>1. Operating-System overview</li> <li>2. Process</li> <li>3. Process</li> <li>4. Threads</li> <li>5. Treads</li> <li>6. Process Synchronization</li> <li>7. Process Synchronization</li> <li>8. CPU Scheduling</li> <li>9. CPU Scheduling</li> <li>10. CPU Scheduling</li> <li>11. CPU Scheduling</li> <li>12. CPU Scheduling</li> <li>13. Deadlocks</li> <li>14. Main Memory</li> <li>15. Main Memory</li> </ol>
Required Texts	•

**College of Computer Science and Mathematics - Department of Software Curricula**  
**Credit Hour System (bachelor's 2023-2024)**

Module Title	Teaching methods
Module Code	CMSWU3207
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	The course aims to teach the student how to follow scientific methods and methods in communicating the scientific idea and teach scientific methods in teaching and achieving the scientific goal and objective that are presented to students at all scientific levels, taking into account following methods that suit the scientific stages and facilitating the means to keep pace with scientific progress and modern technology.
Material Covered	<ol style="list-style-type: none"> <li>1. The concept of teaching methods</li> <li>2. Basic teaching methods</li> <li>3. Scientific knowledge (components of science)</li> <li>4. The importance and types of teaching concepts</li> <li>5. Characteristics of science</li> <li>6. Objectives of science</li> <li>7. Science thinking skills Science Trends</li> <li>8. Educational objectives</li> <li>9. Teaching methods</li> <li>10. Educational Games</li> <li>11. Laboratory in science teaching</li> <li>12. Educational technologies</li> <li>13. Planning in teaching</li> <li>14. Levels of teaching planning</li> </ol>
Required Texts	•

**College of Computer Science and Mathematics - Department of Software Curricula**  
**Credit Hour System (bachelor's 2023-2024)**

Module Title	Information security
Module Code	CMSWU4101
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	Give Introduction to the attacks and their types that can occur during the transmission process between two parties, methods of protecting data, either by traditional encryption methods, block encryption, or public key encryption, how to choose the appropriate protection method, description of attacks, and study of protection mechanisms according to requirements.
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction to data security</li> <li>2. Security attack</li> <li>3. Security mechanism</li> <li>4. Authentication, integrity, and non-repudiation</li> <li>5. Classical transposition method for cryptography</li> <li>6. Classical substitution method for cryptography</li> <li>7. Classical substitution method for cryptography</li> <li>8. Feistel structure</li> <li>9. Data Encryption Standard (DES)</li> <li>10. Number theory</li> <li>11. Euler function</li> <li>12. Public key cryptography</li> <li>13. Secrecy and Authentication</li> <li>14. Encrypt and decrypt using RSA</li> <li>15. Authentication using RSA Algorithm</li> <li>16.</li> </ol>
Required Texts	•

**College of Computer Science and Mathematics - Department of Software Curricula**  
**Credit Hour System (bachelor's 2023-2024)**

Module Title	Software Development Techniques
Module Code	CMSWU4102
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	Teaching the student about old and new software development techniques, the benefits and harms of each technology, and how to choose the appropriate technology for the project
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction</li> <li>2. Traditional Models: waterfall model</li> <li>3. Traditional Models: incremental model</li> <li>4. Traditional Models: Prototype</li> <li>5. Traditional Models: Spiral mode</li> <li>6. Exam</li> <li>7. Agile models</li> <li>8. Agile models</li> <li>9. Agile models: Extreme programming model</li> <li>10. Agile models: Extreme programming model</li> <li>11. Agile models: scrum model</li> <li>12. Agile models: Feature Driven Development</li> <li>13. Agile models: Ci cd</li> <li>14. Difference between traditional and agile models</li> <li>15. Exam</li> </ol>
Required Texts	•

**College of Computer Science and Mathematics - Department of Software Curricula**  
**Credit Hour System (bachelor's 2023-2024)**

Module Title	Image and signal Processing 1
Module Code	CMSWU4103
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	Defining about dealing with images and signal processing, in addition to using techniques and methods for image processing and signal by converting the image from one domain to another, improving image and signal conversion methods, studying the properties of the transfers used in the study, as well as the process of enhancement the images and signals to improve their quality and luminance.
Material Covered	<ol style="list-style-type: none"> <li>1. Introduction of Image and Signal Processing</li> <li>2. Image Types and files formats</li> <li>3. Fourier transformation</li> <li>4. Fourier transformation</li> <li>5. properties of the two-dimensional Fourier transform</li> <li>6. properties of the two-dimensional Fourier</li> <li>7. properties of the two-dimensional Fourier</li> <li>8. The Fast Fourier Transform</li> <li>9. Enhancement methods</li> <li>10. Enhancement methods: Smoothing method in spatial and frequency domain</li> <li>11. Lowpass Filtering in frequency domain</li> <li>12. Image Sharpening</li> <li>13. High pass filter</li> <li>14. Enhancement Based on An Image Model</li> <li>15. pseudo-color image processing</li> <li>16.</li> </ol>

## College of Computer Science and Mathematics - Department of Software Curricula

### Credit Hour System (bachelor's 2023-2024)

Module Title	Design of Real time systems 1
Module Code	CMSWU4105
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	The course aims to provide the student with basic knowledge of real-time systems, their types, and their impact on human life. The types of real-time tasks, methods for scheduling these tasks, calculating them.
Material Covered	<ol style="list-style-type: none"> <li>1. Real Time systems Concepts</li> <li>2. Limits Of Current Real Time Systems</li> <li>3. Desirable Features of Real-Time Systems</li> <li>4. Achieving Predictability/ /DMA</li> <li>5. Achieving Predictability</li> <li>6. Task Classes</li> <li>7. Earliest Deadline First Algorithm</li> <li>8. Fixed Priority Server</li> <li>9. Fixed Priority Server</li> <li>10. Resource Access Protocols</li> <li>11. Resource Access Protocols</li> <li>12. Priority Inheritance Protocol</li> <li>13. Priority Inheritance nested - critical section</li> <li>14. Transitive priority inheritance</li> <li>15. Priority Ceiling Protocol</li> <li>16.</li> </ol>

### Credit Hour System (bachelor's 2023-2024)

Module Title	Open-source Software
Module Code	CMSWU4202
Module Type	Core
Module Hours	2
Module Hours	2
Module Objectives	This course covers the fundamentals of Free and Open-Source software development by considering the previous design and programming courses. The course introduces students to the technological, social, and pragmatic aspects of developing open-source software through direct involvement in an open-source project.
Material Covered	<ol style="list-style-type: none"> <li>1. Course Introduction</li> <li>2. Intro to Programming and The Python Language, Variables</li> <li>3. Conditionals</li> <li>4. Jupyter Notebook, and IDLE</li> <li>5. Intro to Lists, Loops</li> <li>6. Functions</li> <li>7. Classes</li> <li>8. Classes</li> <li>9. More with Lists, Strings, Tuples, Sets, and PyCharm</li> <li>10. Introduction to Inheritance</li> <li>11. Polymorphism</li> <li>12. Dictionaries, Files, and GUI.</li> <li>13. WORKING IN OSS PROJECTS.</li> <li>14. Building Better OSS Projects</li> <li>15. Building Better OSS Projects.</li> </ol>
