Hasoon

Scientific Associate

Date: 24/4/2024

Approval of the Dean
Prof. Dr. Dhuha Basheer Abdullah
Date: 24/4/2024

Academic program description form

Reviewing the performance of higher education institutions ((academic program review))

Description of the academic program

This academic program description provides a brief summary of the most important features of the program and the learning outcomes the student is expected to achieve; Demonstrating whether he has made the most of the available opportunities. It is accompanied by a description of each course within the program

1	Educational institution	University of Mosul
2	University department/center	College of Computer Science and Mathematics/Department of Computer Science
3	Name of the academic program	Computer Science
4	Name of the final certificate	Bachelor of Science in Computer Science
5	School system	Course system
6	Accredited accreditation program	Academic accreditation(ABET)
7	Other external influences	Central examinations
8	Date the description was prepared	2024

Objectives of the academic program

1	Providing students with theoretical and academic knowledge and scientific skills according to the latest scientific findings, as professional and academic cadres that provide society and its institutions with distinguished specialists and various academic qualifications, and strive to increase the number of accepted students after developing and increasing the department's capabilities according to need The labor market and monitoring the educational level through results statistics every year
2	Providing solutions to the problems of state institutions in this regard through the research of graduate students and teaching staff.
3	Keeping pace with modern scientific developments through the research projects of the teachers and focusing on being in the modern fields, especially the applied ones, while not neglecting the academic aspect, including its scientific importance to the department, and following up on this through the research plans prepared annually for the department.
4	Focusing on educational goals through the educational guidance committees in the department linked to the guidance committee in the college and continuous meetings with students to refine their personalities and guide them educationally to solve their problems in a manner consistent with the ethics of our society. All of this is through following up on the committees and their reports that are submitted to the committee in the college and the department presidency.
5	Raising the level of scientific research by holding an annual conference and participating in local, Arab and international conferences.
6	Communicating with modern scientific sources by providing modern books and references from scientific book fairs.

Required learning outcomes and teaching, learning and assessment methods

1	<p>Knowledge and understanding</p> <ol style="list-style-type: none"> 1. For the student to learn programming languages 2. The ability to find scientific solutions to societal problems programmatically. 3. The ability to use and develop means of communication and wired and wireless networks 4. The ability to analyze and evaluate software systems before starting to design the system. 5. Developing student skills in building smart systems that are based on analysis <p>Inference, reasoning, and self-learning.</p> <ol style="list-style-type: none"> 6. Providing the student with some basic rules for evaluating and building software systems based on the basics of software analysis. <p>✓Increasing the student's knowledge of the basics of implementing software systems through understanding the mechanism of computer operation.</p>
2	<p>Subject-specific skills</p> <ol style="list-style-type: none"> 1 .theoretical 2 .practical 3 .Summer training 4 .Graduation research

Teaching and learning methods

1	Ordinary blackboard
2	Smart board
3	Data display device
4	Theoretical, practical, and applied lectures, daily assignments and discussions

Evaluation methods

1	Electronic exams
2	Central and monthly examinations
3	Daily exams
4	Scientific reports
5	Practical exams
6	Research projects
7	Exams, assignments, daily assignments, discussions, laboratory reports, graduation project

Thinking skills

1	The skill of deduction and analysis
2	Comparison skill
3	Discussion skills
4	Skills in using computers and the Internet
5	Research and investigation skill
6	The skill of conducting research and drawing conclusions
7	Decision making skill

Teaching and learning methods

1	Theoretical lectures
2	Practical laboratories
3	Research and investigation
4	Discussion groups within practical lessons
5	Lectures, practical experiments, applications, homework, scientific discussions

Evaluation methods

1	Electronic exams
2	Oral and written examinations
3	Research projects
4	Class discussions
5	Evaluation of assignments and discussions

6	Evaluating individual and group research
7	Exams, assignments, daily assignments, discussions, laboratory reports, graduation project

General and transferable skills (other skills related to employability and personal development)

1	Developing the ability for effective teamwork
2	Developing the ability for self-learning
3	Developing the ability to present and discuss ideas
4	Developing the ability to address problems in a logical, organized manner
5	Ability to work in a multidisciplinary team
6	Ability to communicate and build

Teaching and learning methods

1	Cooperative learning
2	Group discussions
3	Individual learning
4	Lectures, practical experiments, applications, homework, scientific discussions

Evaluation methods

1	Observing students' interaction in different situations
2	Presenting real-life issues and problems and observing how students deal with them programmatically.
3	Evaluating group and individual work
4	Solutions to summer training problems through graduation projects

Academic program

2023-2024

Names of Computer Science Department courses with code, number of credit hours, and number of units

	Course code	Credit hours			Course type	Course Name/English	Course Name/Arabic	Expected number of hours	Number of units
		Discu ssion	practi cal	theore tical					
First year / First course	CMCS23 F11011	—	2	2	Department Requirement	Programming Fundamentals	اساسيات البرمجة	4	3
	CMCS23 F11021	—	2	2	Department Requirement	Computer Organization	تركيب الحاسوب	4	3
	CMCS23 F11041	1	—	3	College Requirement	Discrete Mathematics (1)	هياكل متقطعة (1)	4	3
	CMCS23 F11031	1	—	3	College Requirement	Calculus	تفاضل وتكامل	4	3
	CMCS23 F11071	—	2	—	University Elective	Application Programming	برامج تطبيقية	2	1
	CMCS23 F11061	—	—	2	University Requirement	English Language (1)	لغة انكليزية(1)	2	2
	Total units								15
First year / Second course	CMCS24 F12011	—	2	2	Department Requirement	Advanced Programming	البرمجة المتقدمة	4	3
	CMCS24 F12021	—	2	2	Department Requirement	Logic Design	التصميم المنطقي	4	3
	CMCS24 F12061	1	—	3	Department Requirement	Discrete Mathematics (2)	هياكل متقطعة (2)	4	3
	CMCS24 F12071	—	2	2	Department Elective	Web Programming	برمجة مواقع	4	3
	CMCS24 F12051	—	—	3	College Elective	Principles of Statistics	مبادئ الاحصاء	3	3
	CMCS24 F12031	—	—	2	University Requirement	Arabic Language	لغة عربية	2	2
	CMCS23 F11051	—	—	2	University Requirement	Human Rights	حقوق انسان	2	2
	CMCS24 F12041	—	—	2	University Requirement	Democracy	ديمقراطية	2	2
	Total units								21

	Course code	Credit hours			Course type	Course Name/English	Course Name/Arabic	Expected number of hours	Number of units
		Discu ssion	practi cal	theore tical					
Second year / First course	CMCS23 F21011	—	—	2	College Elective	Research Methodology	منهج البحث العلمي	2	2
	CMCS23 F21021	—	2	2	Department Requirement	Object Oriented Programming	برمجة كيانية	4	3
	CMCS23 F21031	—	2	2	College Elective	Numerical Analysis	تحليل عددي	4	3
	CMCS23 F21041	—	—	3	Department Requirement	Computation Theory (1)	النظرية الاحتمالية(1)	3	3
	CMCS23 F21051	—	—	3	Department Requirement	Computer Architecture	معمارية الحاسوب	3	3
	CMCS23 F21061	—	2	2	Department Requirement	Data Structure (1)	هياكل البيانات (1)	4	3
	CMCS23 F21071	—	—	3	Department Requirement	System Analysis	تحليل وتصميم نظم	3	3
	Total units								20
Second year / second course	CMCS24 F22011	1	—	3	College Elective	Probability & Statistics	احتمالية و احصاء	4	3
	CMCS24 F22021	—	—	3	Department Requirement	Computation Theory (2)	النظرية الاحتمالية(2)	3	3
	CMCS24 F22041	—	2	2	Department Requirement	Data Structure (2)	هياكل البيانات (2)	4	3
	CMCS24 F22051	—	2	2	Department Elective	Visual Programming	برمجة مرئية	4	3
	CMCS24 F22061	2	—	3	College Elective	Advanced Calculus	تفاضل وتكامل متقدم	5	3
	CMCS24 F22031	—	2	2	Department Requirement	System Programming	برمجيات النظام	4	3
	CMCS24 F22071	—	—	2	University Requirement	English Language (2)	لغة انكليزية(2)	2	2
	Total units								20

	Course code	Credit hours			Course type	Course Name/English	Course Name/Arabic	Expected number of hours	Number of units
		Discu ssion	practi cal	theore tical					
Third year - first semester	CMCS24 F31011	—	2	2	Department Requirement	Compilers (1)	المترجمات (١)	4	3
	CMCS24 F31021	—	2	2	Department Requirement	Database (1)	قواعد البيانات (١)	4	3
	CMCS24 F31031	—	2	2	Department Requirement	Software Engineering	هندسة البرمجيات	4	3
	CMCS24 F31041	—	2	2	Department Elective	Encryption	تشفير	4	3
	CMCS24 F31051	—	—	2	University Elective	Principles of Management	مبادئ الادارة	2	2
	CMCS24 F31061	—	—	3	College Elective	Operation Research	بحوث العمليات	3	3
	Total units								17
Third year - Second semester	CMCS25 F32011	—	2	2	Department Requirement	Compilers (2)	المترجمات (٢)	4	3
	CMCS25 F32021	—	2	2	Department Requirement	Artificial Intelligence	ذكاء اصطناعي	4	3
	CMCS25 F32031	—	2	2	Department Requirement	Database (2)	قواعد بيانات (٢)	4	3
	CMCS25 F32051	2	—	2	Department Elective	Digital Signal Processing	معالجة الاشارة الرقمية	4	3
	CMCS25 F32061	—	2	2	Department Requirement	Operating System (1)	نظم التشغيل (١)	4	3
	CMCS25 F32071	1	2	2	College Elective	Computer Mathematics	رياضيات حاسوبية	5	3
	CMCS25 F32041	—	—	2	University Elective	English Language (3)	لغة انكليزية (٣)	2	2
	Total units								20

	Course code	Credit hours			Course type	Course Name/English	Course Name/Arabic	Expected number of hours	Number of units
		Discu ssion	practi cal	theore tical					
Fourth year - First semester	CMCS24 F41011	—	2	2	Department Requirement	Operating System (2)	نظم تشغيل(2)	4	3
	CMCS24 F41031	—	—	3	Department Requirement	Computer Networks	شبكات الحاسوب	3	3
	CMCS24 F41021	—	2	2	Department Requirement	Computer Security	امنية الحاسوب	4	3
	CMCS24 F41051	—	—	2	Department Elective	Simulation &Computer Modeling	نمذجة ومحاكاة	2	2
	CMCS25 F41041	—	2	2	University Elective	Image Processing	معالجة الصور الرقمية	4	3
	CMCS24 F41061	—	4	—	University Elective	Project (1)	مشروع بحث التخرج(1)	4	2
	CMCS24 F41071	—	—	2	College Elective	English Language (4)	لغة انكليزية(4)	2	2
	Total units								18
Fourth year - Second semester	CMCS25 F42011	—	2	1	Department Requirement	Networking Lab	مختبر الشبكات	3	2
	CMCS25 F42041	—	—	3	Department Elective	Distributed System	نظم موزعة	3	3
	CMCS25 F42021	—	2	2	Department Elective	Security Multimedia	امنية وسائط	4	3
	CMCS25 F42031	—	—	3	Department Elective	Electronic Commerce	التجارة الالكترونية	3	3
	CMCS25 F42051	1	—	2	Department Elective	Information Theory	نظرية المعلومات	3	2
	CMCS25 F42061	—	4	—	Department Requirement	Project (2)	مشروع بحث التخرج(2)	4	2
	Total units								15

Degrees and Credit Hours

The Bachelor's degree program requires the completion of (146) credit hours

Curriculum Skills Map

Curriculum description for the first year

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Programming Fundamentals - CMCS23 F11011
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Providing a general introduction to computer programming
2. Focusing on the concepts of problem solving, basic programming constructs, and program design.
3. The course introduces how to design and test simple programs.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Recognize how read and design algorithms and flowchart.
2. Analyze and break down problems.
3. Practice professional C# programming.
4. Debug and troubleshoot C# code.
5. Demonstrate efficient programming skills.
6. Understand basic OOP concepts.
7. Read and write professional C# console applications.

B - Course specific skill objectives ✓ B1 – Theoretical ✓ B2 – Practical B3 - Summer training ✓ B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-Findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- Laboratories ✓ 3- Fact-Findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams ✓ 2- Research projects 3- Summer discussions ✓ 4- Evaluating assignments and discussions ✓ 5- Evaluating individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Input/output instructions I/O.and kind of prototype. And how to open file in Turbo C++ and save , run, and how to show the results , and close the file and language.	Input/output instructions I/O.and kind of prototype.	Whiteboard	-
Second	2	Apply programs for the Assignment statements	Apply programs for the Assignment statements	Data Show Projector	Homework
Third	2	Execute the programs for (constants, variables)	Execute the programs for (constants, variables)	Data Show Projector and Whiteboard	Quiz
Fourth	2	how can to know any errors that appear when execute any program and solve it for types of programs.	how can to know any errors that appear when execute any program and solve it for types of programs.	Data Show Projector	Homework
Fifth	2	Apply programs that solve any problem that content arithmetic operation, relational operation, logical operation.	Apply programs that solve any problem	Data Show Projector	-
Sixth	2	Applying programs that content any idea for Input output operations .	Applying programs that content any idea for Input output operations .	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam
Eighth	2	Execute many programs that include control statements sequence selection (if statement).	Execute many programs that include control statements sequence selection (if statement).	Data Show Projector and Whiteboard	Homework
Ninth	2	Applying and Execute many programs that include control statement sequence selection(nested if statement).	Applying and Execute many programs that include control statement sequence selection	Data Show Projector and Whiteboard	Prepare a report

Tenth	2	Applying many programs that include control statement repetition (for and nested for statements).	Applying many programs that include control statement repetition	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Applying many programs that include control statement repetition ((while & do while statements).	Applying many programs that include control statement repetition	Data Show Projector and Whiteboard	Homework
Twelfth	2	Applying many programs that include control statements switch statement).	Applying many programs that include control statements	Data Show Projector and Whiteboard	Homework
Thirteenth	2	Applying many programs that include control statements case statement).	Applying many programs that include control statements case statement.	Data Show Projector and Whiteboard	Homework
Fourteenth	2	exam	exam		Quiz
Fifteenth	2	Project preparation	Project preparation	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A. Required textbooks	C# 6.0 and the .NET 4.6 Framework Seventh Edition, by Andrew Troelsen and Philip Japikse, APress, 2015
B. Main References (Sources)	Paul Deitel Deitel & Deitel Deitel, Visual C# How to Program, 6th edition, Pearson, 2021
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

1. Teach students how to program simple algorithms using software libraries.
2. Create simple projects.
3. Connect programming to devices like the Arduino or Raspberry Pi.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Computer Organization - CMCS23 F11021

6.Number of study hours (total)	2 theoretical + 2 practical (3 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. This course is considered one of the core courses in computer science, through which the student gains fundamental knowledge about the internal components of the computer and how each part functions.
2. In addition, the student becomes familiar with the technologies used in the manufacturing of these components and how to measure the efficiency of each part.
3. This course serves as a foundation for studying other subjects such as computer architecture and operating systems.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Demonstrate computer architecture concepts related to the design of modern processors, memories, and I/Os.
2. Analyze the performance of commercially available computers.
3. Understand the optimal usage of registers of processors in programming
4. Apply knowledge and demonstrate programming proficiency using the target microprocessor and microcontroller's various addressing modes and data transfer instructions.
5. demonstrate programming proficiency using the target Arithmetic instruction and logic instructions.
6. To Develop a report to generate a code for applications using assembly language programming to meet societal requirements.

B - Course specific skill objectives ✓ B1 – Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exams ✓ 2- Quizzes ✓ 3- Reports ✓ 4-Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Research and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams ✓ 2- Research projects ✓ 3- Summer discussions ✓ 4- Evaluating assignments and discussions ✓ 5- Evaluating individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure					
Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Computer architecture (cpu structure)	Introduction	Whiteboard	-
Second	2	Von_neuman Model, Computer Architecture	Computer Model	Data Show Projector	Homework
Third	2	Main memory & external memory, Hard disk and floppy disk	Memory hierarchy	Data Show Projector and Whiteboard	Quiz
Fourth	2	System Bus	Buses	Data Show Projector	Homework
Fifth	2	Fetch and execute Performing a write operation	Read and write operation	Data Show Projector	-
Sixth	2	Memory address space& data organization 8086	architecture of the Intel 80*86	Data Show Projector and Whiteboard	Report
Seventh	2	Memory segmentation	Memory segmentation		Midterm Exam
Eighth	2	How 8086/8088 read & write from memory	Read/write from memory of 8086mp	Data Show Projector and Whiteboard	Homework
Ninth	2	Logical and physical address, Dedicated , reserved and general –use memory	Type of addresses	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Addressing mode	addressing mode	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Addressing mode	addressing mode	Data Show Projector and Whiteboard	Homework
Twelfth	2	Data transfer inst.(MOV,LEA,LDS,LES,...)	Instruction set	Data Show Projector and Whiteboard	Homework
Thirteenth	2	exam	exam	Data Show Projector and Whiteboard	Homework
Fourteenth	2	exam	exam		Quiz
Fifteenth	2	Project preparation	Project preparation	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure	
A. Required textbooks	John “8086 Intel family”
B. Main References (Sources)	Bery Brey “8086, 8088, 80186, 809286, 80386, 80486 and Pentium” Sunil Mathur “Microprocessor 8086 Architecture Programming and interfacing”,2011
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan
<ol style="list-style-type: none"> 1. Add practical simulations for virtual computer assembly. 2. Compare real hardware specifications (CPUs, RAM, storage). 3. Simple projects (Design a computer within a budget). 4. Use interactive tools (Kahoot, Quizizz, Virtual Labs). 5. Link to the job market (Choosing components, understanding performance). 6. Introduce modern concepts (SSD, NVMe, M1, Cloud Hardware).

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Department
3.Course Name/Code	Discrete Mathematics (1) - CMCS23 F11041
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	3 theoretical + 1 Tutorial (3 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Discrete Mathematics is an important subject for Computer Science students, as it includes the fundamental mathematical concepts they need throughout their four years of study.
2. It enables students to analyze problems and challenges they encounter using correct mathematical methods.
3. Additionally, it helps strengthen their mental abilities and develop their talents.
4. It supports them in solving problems they face during their academic journey.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Recognize and understanding the outline of proposition and not proposition terms and their equations and truth table construction.
2. Describe the equations of that satisfies the equivalence logically.
3. Summarize what is meant by converting not propositional logic to proposition through predicate and quantifier.
4. Understanding the graphical representation and contents of the lists .
5. Understanding the tuples representation compared with the lists.
6. Identify how to produce a new string for any language.
7. Identify the algebraic structures with all types.
8. The ability to determine the isomorphism case between two objects.

<p>9. Understanding how to convert any graph to a plane graph.</p> <p>10. Identify the applications of the combination in the real life.</p> <p>11. . Understanding the permutation term and its applications.</p>
<p>B - Course specific skill objectives</p> <p>✓ B1 – Theoretical</p> <p>B2 – Practical</p> <p>B3 - Summer training</p> <p>B4 - Graduation research</p>

10. Curriculum structure					
Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Introduction to propositional logic	Propositional Logic	Whiteboard	-
Second	2	Compound proposition classification	Propositions Logic	Data Show Projector	Homework
Third	2	Logical Equivalences	Logical Equivalences	Data Show Projector and Whiteboard	Quiz
Fourth	2	Predicate definition	Predicate and Quantifiers	Data Show Projector	Homework
Fifth	2	Quantification and its types	Predicate and Quantifiers	Data Show Projector	-
Sixth	2	Set definition	Sets	Data Show Projector and Whiteboard	Report
Seventh	2	Operations and graphical representation of sets	Sets		Midterm Exam
Eighth	2	Definition and representation of relations	Relations	Data Show Projector and Whiteboard	Homework
Ninth	2	Graphical representation of relations	Relations	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Definition of Graphs	Graphs	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Degree in directed and Undirected graphs	Graphs	Data Show Projector and Whiteboard	Homework
Twelfth	2	Introduction to graphs	Introduction to graphs	Data Show Projector and Whiteboard	Homework
Thirteenth	2	exam	exam	Data Show Projector and Whiteboard	Homework
Fourteenth	2	exam	exam		Quiz
Fifteenth	2	Project preparation	Project preparation	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A. Required textbooks	<ul style="list-style-type: none">Discrete Mathematica and it's applications, Kenneth H. Rosen, 2012.Discrete structures , logic and compatibility, James L. Hein, 2017.
B. Main References (Sources)	Mathematics of discrete structures for computer sciences
C. Recommended books and references (scientific journals, reports, etc.)	https://www.google.iq/books/edition/Mathematics_of_Discrete_Structures_for_C/kYYJLhL2arwC?hl=en&gbpv=0
D. Electronic references, websites,	

12. Curriculum Development Plan

1. Adding proof techniques: proof by contradiction, mathematical induction.
2. Graphs and trees: binary trees, decision trees.
3. Artificial intelligence applications, optimization algorithms.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Department
3.Course Name/Code	Calculus - CMCS24 F22061
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	3 theoretical + 1 Tutorial (3 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Teaching computer science students the mathematical fundamentals required for computer science programmers,
2. Focus on practical issues and away from the theoretical aspects typically studied by mathematics students.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

- 1- Understanding and Applying a Variety of Mathematical Methods: Students learn a variety of different mathematical methods and techniques that can be used to solve complex mathematical problems.
- 2- Developing Critical Thinking Skills: Analytical, synthesis, and critical thinking skills are enhanced when students learn a variety of mathematical methods. Students are encouraged to think systematically and analyze mathematical problems in depth.
- 3- Ability to Solve Complex Mathematical Problems: Students learn how to analyze and understand complex mathematical problems and apply appropriate mathematical methods and techniques to solve them correctly.

4- Creative Thinking and Innovation: Learning a variety of mathematical methods encourages students to think creatively and innovate in solving mathematical problems. Students learn how to develop new and unique solutions using mathematical methods.
B - Course specific skill objectives ✓ B1 – Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ Whiteboard ✓ Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures 2- laboratories ✓ 3- Fact-findings and investigation 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions 5- Evaluation of individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Trigonometric functions and its basic properties	Trigonometric functions and its basic properties	Whiteboard	-
Second	2	The differentiation of trigonometric function	The differentiation of trigonometric function	Data Show Projector	Homework
Third	2	The differentiation of trigonometric function	The differentiation of trigonometric function	Data Show Projector and Whiteboard	Quiz
Fourth	2	basic concepts of integration	basic concepts of integration	Data Show Projector	Homework
Fifth	2	defined and undefined integrals	defined and undefined integrals	Data Show Projector	-
Sixth	2	some methods of integration	some methods of integration	Data Show Projector and Whiteboard	Report
Seventh	2	some methods of integration	some methods of integration		Midterm Exam
Eighth	2	basic application of integration	basic application of integration	Data Show Projector and Whiteboard	Homework
Ninth	2	basic application of integration	basic application of integration	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Sequences	Sequences	Data Show Projector and Whiteboard	Quiz
Eleventh	2	infinite series	infinite series	Data Show Projector and Whiteboard	Homework
Twelfth	2	alternating series	alternating series	Data Show Projector and Whiteboard	Homework
Thirteenth	2	exam	exam	Data Show Projector and Whiteboard	Homework
Fourteenth	2	exam	exam		Quiz
Fifteenth	2	Project preparation	Project preparation	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure	
A. Required textbooks	Trigonometric functions and its basic properties, the differentiation of trigonometric function, basic concepts of integration, defined and undefined integrals, some methods of integration.
B. Main References (Sources)	basic application of integration, sequences, infinite series, alternating series, power series.
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan
<ol style="list-style-type: none"> 1- Content: Simplifying concepts and introducing real-life applications. 2- Teaching: Training teachers in modern methods (PBL, collaborative learning). 3- Assessment: Diversifying assessment methods (short tests, projects, electronic assessment).

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul

4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	2 practical (1 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Content Update: Introducing modern programs and practical applications that keep pace with technological developments, such as artificial intelligence tools and cloud computing software.
2. Developing Teaching Methods: Adopting project-based learning and interactive learning using simulations and practical activities.
3. Teacher Qualification: Training teachers in the use of modern programs and active learning methods.
4. Improving the Learning Environment: Updating computer labs and providing the necessary software and tools to support applied learning.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

- 1- Understand the key concepts relating to ICT, computers, devices, and software
- 2- Identify the different settings and options of an operating system and use the built-in help
- 3- Recognize good practice in file management and be able to organize files and folders efficiently
- 4- Understand network concepts and connection options and be able to connect to a network
- 5- Recognize considerations relating to green IT, accessibility, and user health

B - Course specific skill objectives <ul style="list-style-type: none"> ✓ B1 – Theoretical ✓ B2 – Practical B3 - Summer training ✓ B4 - Graduation research

6.Number of study hours (total)	2 theoretical (2 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. To be able to speak English fluently and accurately.
2. To think in English and then speak.
3. To be able to talk in English.
4. To be able to compose freely and independently in speech and writing.
5. To be able to read books with understanding.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. To address grammar issues that students encounter in their daily speech, writing, reading, and listening.
2. To address the issue of grammatical errors that affect effective communication.
3. To improve your reading skills through the practice of vocabulary enrichment, reading comprehension exercises, speed reading strategies, written responses, discussions, and reflections
4. Recognize the structure and organization of paragraphs,

<p>5. Use strategies to think critically about reading and use appropriate technology to enhance reading comprehension, reading speed, and vocabulary development.</p> <p>6. Develop the writing skill.</p>

B. Main References (Sources)	Headway pre-intermediate plus work's book
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

1. Strengthening oral and written communication skills.
2. Linking language to real-life situations and everyday life.
3. Introducing English culture (customs, expressions, attitudes).
4. Using modern technology in learning (apps, videos, live interaction).
5. Supporting critical and creative thinking skills.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Department
3.Course Name/Code	Advanced Programming - CMCS24 F12011
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	2 theoretical + 2 practical (3 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Improve Problem-Solving Skills: Enable students to analyze problems, break them down into smaller components, and design appropriate solutions using a systematic approach.
2. Master Advanced C# Programming: Teach students the advanced data types, control structures, and functions of the C# programming language.
3. Code Modularity Concepts: Teach students how to write modular code using different concepts like functions, libraries, and object-oriented programming principles.
4. Promote Effective Programming Practices: Instill good programming habits, such as code documentation, proper naming conventions, and writing readable and maintainable code.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Demonstrate problem solving skills.
2. Practice professional C# programming.
3. Summarize code modularity and reusage.
4. Communicate and Document Code
5. Work collaboratively in teams.
6. Apply programming skills to Real-World scenarios
7. Prepare for future programming concepts.

B - Course specific skill objectives ✓ B1 – Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- Practical laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams ✓ 2- Research projects ✓ 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluation of individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Department
3.Course Name/Code	Digital Logic Design - CMCS24 F12021
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	2 theoretical + 2 practical (3 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. To learn the basic techniques and methodologies for designing and analyzing digital systems and how to apply these techniques to build specific circuits.
2. Define the problem (Inputs and Outputs), write its functions
3. Implement functions using Combinational digital circuit.
4. Minimize functions using any type of minimizing algorithms (Boolean algebra, Karnaugh-Map or Tabulation Method).
5. Have knowledge in analyzing and designing procedures of Combinational digital circuits.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

- 1- Learning about the different number systems .
- 2- Learning the arithmetic operations related to different number systems.
- 3- Learning the different logic gates of computer system and their work .
- 4- Ability to design, simplify and implement different logical and arithmetic circuits that considered the basic of digital system .
- 5- Ability to design, simplify and implement different sequential circuits, counters and shift registers.

B - Course specific skill objectives ✓ B1 – Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluation of individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure					
Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Numbering Systems	Numbering Systems	Whiteboard	-
Second	2	Arithmetic Operations	Arithmetic Operations	Data Show Projector	Homework
Third	2	BCD and Excess 3 Code	BCD and Excess 3 Code	Data Show Projector and Whiteboard	Quiz
Fourth	2	Logic Gates	Logic Gates	Data Show Projector	Homework
Fifth	2	Simplification and Boolean Functions	Simplification and Boolean Functions	Data Show Projector	-
Sixth	2	Karnaugh Map	Karnaugh Map	Data Show Projector and Whiteboard	Report
Seventh	2	Digital Circuit Design	Digital Circuit Design		Midterm Exam
Eighth	2	Combinational Circuits	Combinational Circuits	Data Show Projector and Whiteboard	Homework
Ninth	2	Binary Full and Half Adder	Binary Full and Half Adder	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Binary Subtractor	Binary Subtractor	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Multiplexer and Demultiplexer	Multiplexer and Demultiplexer	Data Show Projector and Whiteboard	Homework
Twelfth	2	Decoder and Encoder	Decoder and Encoder	Data Show Projector and Whiteboard	Homework
Thirteenth	2	exam	exam	Data Show Projector and Whiteboard	Homework
Fourteenth	2	exam	exam		Quiz
Fifteenth	2	Project preparation	Project preparation	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure	
A. Required textbooks	Digital Principles and Applications, by Malvino And Leach
B. Main References (Sources)	<ul style="list-style-type: none"> • Digital Fundamentals, by Floyd. • Switching Theory and Logic Design, by M. V. Sabramanyam.
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan
<ol style="list-style-type: none"> 1. Content Simplification <ul style="list-style-type: none"> • Clarification of Concepts + Practical Applications 2. Applied Learning <ul style="list-style-type: none"> • Use of Logisim + Circuit Projects 3. Educational Technology <ul style="list-style-type: none"> • Videos – Virtual Experiments – Simulations 4. Modern Teaching Methods <ul style="list-style-type: none"> • Active Learning – Design Challenges – Teamwork 5. Practical Assessment <ul style="list-style-type: none"> • Projects + Simulation Tests 6. Expected Outcomes <ul style="list-style-type: none"> • Deep Understanding + Ability to Design and Implement Logic Circuits

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Department
3.Course Name/Code	Discrete Mathematics (2)- CMCS24 F12061
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	3 theoretical + 1 Tutorial (3 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. This course is considered one of the basic courses in computer science, through which the student acquires basic knowledge about the nature of discrete structures and how to transform and formulate any application and convert it from the theoretical side into a set of symbols and variables through which software can be formulated to achieve the desired goal.
2. The terms and notations of discrete structures are useful for studying and expressing issues related to objects such as data, variables, and functions and employing them in the field of computer programming and algorithms.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

- 1- Recognize and understanding the outline of proposition and not proposition terms and their equations and truth table construction.
- 2- Describe the equations of that satisfies the equivalence logically.
- 3- Summarize what is meant by converting not propositional logic to proposition through predicate and quantifier.
- 4- Understanding the graphical representation and contents of the lists .
- 5- Understanding the tuples representation compared with the lists.
- 6- Identify how to produce a new string for any language.
- 7- Identify the algebraic structures with all types.

8- The ability to determine the isomorphism case between two objects. 9- Understanding how to convert any graph to a plane graph. 10- Identify the applications of the combination in the real life. 11- . Understanding the permutation term and its applications.
B - Course specific skill objectives ✓ B1 – Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures 2- laboratories ✓ 3- Fact-findings and investigation 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams ✓ 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions 5- Evaluation of individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure					
Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Introduction to Trees	Trees	Whiteboard	-
Second	2	Function and its types	Functions	Data Show Projector	Homework
Third	2	Definition of Hashing(Hash table)	Hashing	Data Show Projector and Whiteboard	Quiz
Fourth	2	Graphical representation of Lists	Lists and Tuples	Data Show Projector	Homework
Fifth	2	Definition and operations of Tuples	Lists and Tuples	Data Show Projector	-
Sixth	2	Strings (definition and types)	Strings and Languages	Data Show Projector and Whiteboard	Report
Seventh	2	Language and its operations	Strings and Languages		Midterm Exam
Eighth	2	Introduction to Isomorphism	Isomorphism and Planar	Data Show Projector and Whiteboard	Homework
Ninth	2	Planar and its applications	Isomorphism and Planar	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Algebraic structures	Algebraic structures	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Properties of binary operations	Algebraic structures	Data Show Projector and Whiteboard	Homework
Twelfth	2	Types of algebraic structures	Algebraic structures	Data Show Projector and Whiteboard	Homework
Thirteenth	2	exam	exam	Data Show Projector and Whiteboard	Homework
Fourteenth	2	exam	exam		Quiz
Fifteenth	2	Project preparation	Project preparation	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A. Required textbooks	Discrete Mathematica and it's applications, Kenneth H. Rosen, 2012.
B. Main References (Sources)	
C. Recommended books and references (scientific journals, reports, etc.)	https://www.pdfdrive.com/discrete-mathematics-books.html
D. Electronic references, websites,	

12. Curriculum Development Plan

1. Graphical illustrations, combinatorics, and probabilities.
2. Using examples from programming and networks.
3. Mini-projects + real-world exercises.
4. Modern tools such as Python, MATLAB, and interactive simulations.
5. Workshops, group learning, and logical reasoning.
6. Applied problems + projects.
7. Expected outcomes
8. Applied understanding of discrete structures in computing.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Department
3.Course Name/Code	Web Programming - CMCS24 F12071
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	2 theoretical + 2 practical (3 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

- 1- Teach students basic and advanced skills in website development and design.
- 2- Learn basic programming languages for building interactive web pages
- 3- how to design user interfaces. Students also learn how to use databases to store and retrieve data in web applications.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Understanding of Web programming Principles: Learn the fundamentals of web development, including concepts like client-server architecture, HTTP protocol, web standards.
2. Proficiency in HTML: Gain a thorough understanding of HTML and its syntax, allowing to create the structure and content of web pages effectively.
3. Problem-Solving and Debugging Skills: Develop the ability to identify and solve web programming issues, debug code, and troubleshoot common errors.
4. Collaboration: Learn to work collaboratively with other students.
5. Competence in CSS: Develop skills in CSS to style web pages, control layout, and apply visual design concepts to enhance the appearance of websites.

6. JavaScript: Acquire a solid foundation in JavaScript, enabling you to add interactivity, manipulate the Document Object Model (DOM), handle events, and implement dynamic functionality on web pages. 7. Understanding of Web programming Principles: Learn the fundamentals of web development, including concepts like client-server architecture, HTTP protocol, web standards. 8. Proficiency in HTML: Gain a thorough understanding of HTML and its syntax, allowing to create the structure and content of web pages effectively. 9. Problem-Solving and Debugging Skills: Develop the ability to identify and solve web programming issues, debug code, and troubleshoot common errors. 10. Collaboration: Learn to work collaboratively with other students. 11. Competence in CSS: Develop skills in CSS to style web pages, control layout, and apply visual design concepts to enhance the appearance of websites. 12. JavaScript: Acquire a solid foundation in JavaScript, enabling you to add interactivity, manipulate the Document Object Model (DOM), handle events, and implement dynamic functionality on web pages.
B - Course specific skill objectives ✓ B1 – Theoretical ✓ B2 – Practical B3 - Summer training ✓ B4 - Graduation research

<ol style="list-style-type: none"> 1. Content updates such as HTML, CSS, JavaScript, and new technologies. 2. Applied projects such as designing and developing real websites. 3. Modern tools such as VSCode, GitHub, and Figma. 4. Active learning such as group work and programming challenges. 5. Practical assessments such as building websites and presenting projects. 6. Expected outcomes such as professional websites and job market skills.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Department
3.Course Name/Code	Principles of statistics - CMCS24 F12051
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	3 theoretical (3 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Providing the learner with the statistical skills that enable them to work in the field of statistics and calculate its metrics.
2. Statistics is a numerical language and an art for accurately expressing variables and numbers. Therefore, it enables the student to benefit from this science in statistics and programs that interest them in most areas of life.
3. The statistics course aims to develop methods and ways of thinking and how to deal with various problems.
4. Attempting to think in sound ways and methods, specifically in solving problems, thus improving and developing society.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

- 1- Understand the fundamental concepts and principles of statistics, including data types, measurement scales, and sampling methods.
- 2- Interpret and analyze data using descriptive statistical measures, such as measures of central tendency (mean, median, mode) and measures of variability (range, variance, standard deviation).
- 3- Apply probability theory to analyze and make predictions about uncertain events, including calculating probabilities and understanding the laws of probability.

<ul style="list-style-type: none"> 4- Utilize basic principles of statistical inference to draw conclusions about a population based on sample data, including hypothesis testing and confidence intervals. 5- Apply appropriate statistical techniques for analyzing relationships between variables, including correlation analysis and simple linear regression. 6- Understand and interpret the results of statistical software output and graphical representations.

6.Number of study hours (total)	2 theoretical (2 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Strengthening the student's linguistic ability and equipping them with the skill of correct expression.
2. Developing the student's writing and spelling skills to enable them to write scientific research and reports correctly, as well as to use punctuation marks and place them appropriately in sentences.
3. Training the student to use grammatical rules while reading, writing, and expressing themselves.
4. Accustoming the student to understanding the material read and expressing it in their own language, which encourages the student to think and innovate.

9. Course outcomes, teaching, learning and assessment methods

A- Upon completion of the Arabic Language course, students are expected to achieve the following outcomes:

1. Knowledge of grammatical rules
2. Knowledge of how to employ Arabic language tools in writing academic research
3. Promoting Arabic content on the Internet
4. E-learning and the use of computers in education

B - Course specific skill objectives ✓ B1 – Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods

A. Required textbooks	كتاب النحو الوافي للمؤلف عباس حسن
B. Main References (Sources)	كتاب النحو الشافي للمؤلف محمود حسني والفية ابن مالك
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

1. Content updates, such as developing reading, writing, speaking, and listening skills.
2. Comprehension enhancement, such as simplifying grammar and focusing on literary texts.
3. Educational technology, such as the use of apps and interactive videos.
4. Interactive activities, such as creative writing workshops and dialogue simulations.
5. Diverse assessments, such as projects, reports, and interactive tests.
6. Expected outcomes, such as improved writing, speaking, and cultural understanding skills.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Department
3.Course Name/Code	Human Rights - CMCS23 F11051
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	2 theoretical (2 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Defending human dignity
2. Contributing to changing people's lives for the better by changing values and feelings and changing behavior
3. Promoting the concept of social justice
4. Strengthening the connection between the individual, the group, the state, and its institutions
5. Enhancing feelings of solidarity with others
6. Developing skills to monitor violations and deal with violators
7. Supporting skills to understand human rights issues
8. Promoting interactive learning methods
9. Promoting ways to participate in public affairs – citizenship

9. Course outcomes, teaching, learning and assessment methods

A- Upon completion of this course, students are expected to achieve the following outcomes:

1. Teaching the main principles of the most prominent human rights, their sources, types, and the mechanisms used to protect them.
2. Regarding the behavioral aspect, human rights courses must aim to translate knowledge, experiences, values, and behavioral patterns into ongoing action and continuous activity to defend them in real life and enhance efforts to address human rights issues.

3. Adopting, nurturing, and encouraging the qualities of tolerance, respect, and solidarity inherent in human rights. 4. Introducing human rights from their regional and international dimensions, and the institutions established to implement them. 5. Developing individuals' knowledge of the means and methods by which human rights can be translated into social and political realities at the regional and international levels. 6. Enlightening individuals about their personal rights and instilling in them respect for others.

Second	2	- Human Rights: Definition, Definition, and Guarantees Section One: The Relationship Between Human Rights and Public Freedoms Section Two: Forms and Types of Human Rights and the Interrelationship Between Them Section Three: Guarantees of Respect and Protection of Human Rights	Human Rights: Definition, Definition, and Guarantees	Data Show Projector	Homework
Third	2	- Content: Public Freedoms General Introduction	Content: Public Liberties	Data Show Projector and Whiteboard	Quiz
Fourth	2	The General Theory of Public Freedoms Section One: The Origin of Rights and Freedoms Section Two: The Functional Nature of the Concept of Public Freedoms	The General Theory of Public Liberties	Data Show Projector	Homework
Fifth	2	Freedoms -The Legal System of Public Freedoms	The Legal System of Public Liberties	Data Show Projector	-

		Section One: The Legal Basis of the Legal State Section Two: Regulation of Public Freedoms by Public Authorities			
Sixth	2	-Guarantees of Public Freedom Section One: Litigation or Non-Judicial Regulation Section Two: Judicial Appeal Section Three: Determining the State's Responsibility for its Legitimate Acts Section Four: The Impact of the Duality of the Judiciary on Public Freedoms Section Five: Public Freedoms According to Administrative Jurisprudence	Guarantees of Public Liberties	Data Show Projector and Whiteboard	Report
Seventh	2	-The Concept of Equality Section One: The Historical Development of the Concept Equality Section Two: The Modern Development of the Concept of Equality	Guarantees of Public Liberties		Midterm Exam
Eighth	2	Principles of Public Liberties in Detail Section Two: Public Liberties	The Concept of Equality	Data Show Projector and Whiteboard	Homework
Ninth	2	-Classification of Public Liberties	Principles of Public Liberties in Detail	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	-Fundamental or Individual Liberties Section One: Freedom of Security, Feeling, and Confidence	Section One: Freedom of Security, Feeling, and Confidence	Data Show Projector and Whiteboard	Quiz
Eleventh	2	-Freedom of Movement and Return Section Two: Intellectual Freedoms Section One: Freedom of Opinion Section Two: Freedom of Belief -Personal Freedom	Section Two: Intellectual Freedoms	Data Show Projector and Whiteboard	Homework
Twelfth	2	The Law of Separation of Church and State	The Law of Separation of Church and State	Data Show Projector	Homework

		Section Three: Freedom of Education Section Four: Freedom of the Press Section Five: Freedom of Assembly Section Six: Freedom of Association		and Whiteboard	
Thirteenth	2	exam	exam	Data Show Projector and Whiteboard	Homework
Fourteenth	2	exam	exam		Quiz
Fifteenth	2	Project preparation	Project preparation	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A. Required textbooks	د. امير عبد العزيز، حقوق الإنسان في الإسلام
B. Main References (Sources)	نسرین محمد عبده حسونة، ٢٠١٥، حقوق الإنسان... المفهوم والخصائص والتصنيفات والمصادر
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

1. Simplifying legal concepts.
2. Introducing contemporary issues.
3. Linking to real-world studies.
4. Interactive learning (debates, workshops).
5. Using digital media.
6. Assessment through projects and discussions.
7. Promoting community awareness and participation.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Department
3.Course Name/Code	Democracy - CMCS24 F12041
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	2 theoretical (2 Units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Clarifying political concepts among students and consolidating national identity, as well as promoting shared values among members of a single community, enabling them to exercise their political roles and participate in elections, thus contributing to strengthening national unity.
2. The timing of teaching this subject has a significant impact on building a culture of conscious participation and equipping students with critical thinking skills.
3. Reinforcing the concept of social justice.
4. Contributing to providing greater space for discussion of democracy, human rights, and political development.
5. Discussing political life, its development, and emergence.
6. Adopting methods of dialogue, discussion, and debate in teaching.
7. Promoting interactive learning methods.
8. Promoting ways to participate in public affairs – citizenship.

9. Course outcomes, teaching, learning and assessment methods	
A- Upon completion of this course, students are expected to achieve the following outcomes: <ol style="list-style-type: none"> 1. Teaching the main principles of democracy, its sources, types, and the mechanisms used to protect it. 2. Behavioral: Democracy courses must target translating knowledge, experiences, values, and behavioral patterns into ongoing action and continuous activity to defend democracy in real life and enhance efforts to address human rights issues. 3. Adopt, nurture, and encourage the qualities of tolerance, respect, and solidarity inherent in democracy. 4. Introduce democracy from its regional and international dimensions. 5. Enlighten individuals about their personal rights and instill in them respect for others. 	
B - Course specific skill objectives <ul style="list-style-type: none"> ✓ B1 – Theoretical B2 – Practical B3 - Summer training B4 - Graduation research 	
Teaching and learning methods	
<ul style="list-style-type: none"> ✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector 	
Evaluation methods	
<ul style="list-style-type: none"> ✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects 	
C- Emotional and valuable goals <ul style="list-style-type: none"> ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making 	
Teaching and learning methods	
<ul style="list-style-type: none"> ✓ 1- Theoretical lectures 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons 	
Evaluation methods	
<ul style="list-style-type: none"> ✓ 1- Written exams ✓ 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions 5- Evaluation of individual and group research 	

D- General and transferable skills (other skills related to employability and personal development).

1. Developing the ability to work effectively in a team.
2. Developing the ability for self-directed learning.
3. Developing the ability to generate and discuss ideas.
4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Introduction to Democracy, General Definition of Democracy	Introduction	Whiteboard	-
Second	2	Types of Democracy, Characteristics of the Democratic System	Types of Democracy	Data Show Projector	Homework
Third	2	Features of the Democratic System, Key Conclusions about the Democratic System	Features of the Democratic System	Data Show Projector and Whiteboard	Quiz
Fourth	2	The Intellectual Foundations of Democracy, Measuring Democracy, Islamists' View of Democracy	The Intellectual Foundations of Democracy	Data Show Projector	Homework
Fifth	2	Democracy and Shura, Democracy and Capitalism	Democracy and Shura, Democracy and Capitalism	Data Show Projector	-
Sixth	2	Elements of the Democratic Model, General Foundations of Democracy, Elements of Democracy	Elements of the Democratic Model	Data Show Projector and Whiteboard	Report
Seventh	2	Political Participation, Key Types of Political Participation	Political Participation		Midterm Exam
Eighth	2	Elections, Election Conditions and Conditions for Voters and Elected Persons	Elections	Data Show Projector and Whiteboard	Homework
Ninth	2	Characteristics of Elections, Types of Electoral Laws, Election Methods	Characteristics	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	The Importance of Elections, Election Oversight, Representatives	The Importance of Elections	Data Show Projector and Whiteboard	Quiz

A. Required textbooks	الكتب الدراسية والمنهجية المقررة من اللجنة العلمية ولجان الاعتماد والأكاديمي .
B. Main References (Sources)	المحاضرات المؤرشفة من قبل تدريسي الاختصاص لكل مادة ورقية كانت أم فيديو
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

1. Simplifying the concepts of democracy and citizenship.
2. Connecting to society and the local and global political reality.
3. Discussing contemporary issues (freedom of expression, voting rights).
4. Interactive activities (debates, mock elections, parliamentary simulations).
5. Using modern media (videos, digital content).

The background of the page features a large, faint, circular logo of the University of Mosul. The logo is blue and white, with a central emblem depicting a building and a sun. The text "Computer Science Department" is written in English and Arabic at the top. The years "1981" and "1400" are on the left and right sides respectively. At the bottom, the text "University of Mosul" and "College of Computer Science and Mathematics" is written in English and Arabic.

Curriculum description for the second year

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Research Methodology - CMCS23 F21011
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical (2 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Acquire scientific research writing skills
2. Introduce scientific research, its methods and approaches, tools and means, steps, stages, and writing principles.
3. Focus on how to write research in general and graduation projects in particular.
4. Emphasize the applied scientific method, as students in science colleges are required not only to conduct theoretical analytical research, but also to use the practical application programs they have studied during their academic years.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Search for, select and critically analyze research articles and papers
2. Prepare a literature review
3. Formulate and evaluate research questions
4. Develop a research proposal or industry project plan
5. Gain experience with instrument development and data collection methods

B - Course specific skill objectives ✓ B1 - Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- whiteboard ✓ 2- Smart board ✓ 3- Data projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). Developing the ability to work effectively in a team. Developing the ability for self-directed learning. Developing the ability to generate and discuss ideas. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	المقدمة ومفهوم البحث العلمي	المقدمة	Whiteboard	-
Second	2	مفهوم منهج البحث والغاية من البحث وأنواع البحث العلمي	منهج البحث العلمي	Data Show Projector	Homework
Third	2	صفات وسلوك الباحث العلمي صفات البحث العلمي الجيد	صفات الباحث	Data Show Projector and Whiteboard	Quiz
Fourth	2	مفهوم الاقتباس وأنواعه	الاقتباس	Data Show Projector	Homework
Fifth	2	خطوات إعداد البحث العلمي (البداية بالبحث) (اختيار مشكلة وكيفية مراجعة الأدب النظري والدراسات السابقة ذات الصلة بموضوع الدراسة وتحديد أسئلة البحث وأهداف البحث وأهميته وتحديد مجتمع (نطاق) البحث وعينته وتحديد حدود البحث)	خطوات إعداد البحث العلمي	Data Show Projector	-
Sixth	2	تكملة خطوات إعداد البحث العلمي (البداية بالبحث) (تحديد فرضيات البحث واختبار فرضيات البحث باستخدام مناهج البحث العلمي (العملي) والتدوين وتجميع الأفكار وصياغة وكتابة البحث وفهرسة المصادر)	خطوات إعداد البحث العلمي	Data Show Projector and Whiteboard	Report
Seventh	2	فروض البحث وأنواعها واختيارها باستخدام مناهج البحث العلمي.	فروض البحث		Midterm Exam
Eighth	2	صياغة وكتابة البحث (عنوان الدراسة، الخلاصة، الجداول أو القوائم، المقدمة، المصطلحات، محددات أو حدود الدراسة)	صياغة وكتابة البحث	Data Show Projector and Whiteboard	Homework
Ninth	2	تكملة موضوع صياغة وكتابة البحث (الدراسات السابقة، الجانب النظري، هدف أو أهداف الدراسة، أهمية البحث، منهج البحث المستخدم في الدراسة)	صياغة وكتابة البحث	Data Show Projector and Whiteboard	Prepare a report

		(الجانب العملي او الجانب المقترح في البحث) ، نتائج الدراسة، مناقشة الدراسة)			
Tenth	2	مصادر البحث (طريقة الاشارة اليها وصيغة كتابتها) وكيفية استعمال علامات الترقيم وكيفية ترقيم صفحات البحث بانواعه.	مصادر البحث	Data Show Projector and Whiteboard	Quiz
Eleventh	2	طريقة ترتيب فصول تقرير البحث . مع عرض نماذج القوائم التي توجد ببحث التخرج. والاطلاع على نموذج البحوث المنشورة في المجلات ورسائل الدراسات العليا ومشاريع المرحلة الرابعة .	ترتيب البحث	Data Show Projector and Whiteboard	Homework
Twelfth	2	أخطاء تقع عند تحديد مشكلة البحث أخطاء يقع فيها الباحثون، وطريقة صياغة البحث من الناحية اللغوية.	الأخطاء الشائعة	Data Show Projector and Whiteboard	Homework
Thirteenth	2	تعليم الطلبة على طريقة البحث بالنت وخصوصا استعمال محرك بحث الباحث العلمي (google scholar) والاطلاع على برامج ادارة المراجع وكيفية ربطها بمحرك البحث.	البحث بالنت	Data Show Projector and Whiteboard	Quiz
Fourteenth	2	التعرف على برنامج ادارة المراجع Mendely وكيفية التعامل معه بشكل عملي وربطه مع برنامج معالجة النصوص. كيفية إضافة المراجع إلى برنامج تحرير النصوص (WORD) .	برامج ادارة المراجع	Data Show Projector and Whiteboard	Project Discussion
Fifteenth	2	Review	Review	Review	Review

11. Infrastructure	
A. Required textbooks	<p>١. تعليمات كتابة مشاريع التخرج (أ.م.د. محسن نوري حمزة أ.م. مقدم طارق جيجان) ٢٠١٥</p> <p>٢. الدليل المختصر في كتابة البحث العلمي(أ.د. عبدالرحمن عبيد) المركز العربية الطبعة الأولى ٢٠١٢</p> <p>أساسيات البحث العلمي لطلاب الحاسوب وتقنية المعلومات (د.كمال الدين يوسف) ٢٠١٧</p>
B. Main References (Sources)	
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan
Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Object Oriented Programming - CMCS23 F21021
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Building programs from pre-existing models saves time and effort and increases productivity, both quantitatively and qualitatively.
2. Building hidden programs.
3. Helps in dividing work.
4. Through inheritance, duplicate code segments can be eliminated and expanded.
5. Large and complex programs can be easily built and managed.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Codes basic programs in C# programming language
2. Uses objects and classes
3. Lists the object-oriented programming concepts
4. Declares objects and classes
5. Distinguishes classes and objects
6. Declares and uses variables
7. Declares and uses methods and properties
8. Explains and uses encapsulation
9. Explains and uses inheritance
10. Explains and uses polymorphism

11. Explains and handles exceptions 12. Describes exceptions

4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

Numerical Analysis is a fundamental and complementary subject to mathematics. This course aims to introduce students to the concept of numerical analysis and how to use numerical methods to solve difficult mathematical problems (that cannot be solved manually) using a computer programming language. These include linear equations, solving nonlinear equations, solving systems of linear equations, and numerical integration methods.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

4. Understand floating point numbers, computer arithmetic and the role of errors in numerical analysis.
5. Understand the applicability and limitations of a range of important numerical schemes and their role in science and mathematics.
6. Develop their own numerical algorithms for real-world problems, implement them in a computer, visualize and interpret their solutions.
7. Understand accuracy, consistency, stability and convergence of a numerical method, and the concepts of well- and ill-conditioned problems.

4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	3 theoretical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

8. Familiarity with the basic concepts of computational theory, the basics of language theory, and general concepts in building programming languages in a mathematical manner.
9. Knowing and distinguishing the different operations that take place on languages and machines that each language recognizes.
10. Knowledge of the basics of automata theory and regular expressions as mathematical models that help in defining programming languages and formal languages.
11. The ability to use the concepts of computational theory as basic tools in building programming languages and how to derive them in a logical manner, as its tools represent an important part of the stages of building compilers for each programming language.
12. Acquisition of basic skills as an introduction to building languages and problem-solving.
13. Acquisition of theoretical concepts to know the various processes that take place on languages.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Demonstrate advanced knowledge of formal computation and its relationship to languages
2. Distinguish different computing languages and classify their respective types
3. Recognize and comprehend formal reasoning about languages
4. Understand, use and work with grammars of various forms

5. Understand Finite Automata: DFA, NFA, and many more! 6. Specify and be able to simulate various types of automata 7. Able to extract computational model from a real-world problem
B - Course specific skill objectives ✓ B1 - Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- whiteboard ✓ 2- Smart board ✓ 3- Data projector

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Computer Architecture - CMCS23 F21051
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	3 theoretical tutorial (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

Defining the structure of the computer, how the units work, and explaining the components of the computer. It covers all types of memory used, how and how to explain the central processing unit and its parts, how to execute instructions inside it, how the input and output devices work, and explaining parallel processing, which allows the student to have a deep understanding of how computer devices interact with each other and with the operating system in order to perform various functions.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Have a clear understanding of the Computer terminology.
2. Have knowledge of Computer architecture and Hardware specifications.
3. Have knowledge of different types of computers and techniques.
4. Review the need to use a memory hierarchy, perform memory management, and to explain to them the various memory management techniques and their tradeoffs.
5. Prepare and deliver coherent and structured verbal and written technical reports.
6. Review operation of hardware and software working synergistically together.

B - Course specific skill objectives ✓ B1 - Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- whiteboard ✓ 2- Smart board ✓ 3- Data projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). Developing the ability to work effectively in a team. Developing the ability for self-directed learning. Developing the ability to generate and discuss ideas. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Number Systems	Common Number Systems and Conversions	Whiteboard	-
Second	2	Introduction to computer architecture (ISA+HAS) + NON VON NEUMANN MACHINE	Introduction to Computer Architecture	Data Show Projector	Homework
Third	2	MEMORY SYSTEM ARCHITECTURE	Memory System Architecture	Data Show Projector and Whiteboard	Quiz
Fourth	2	RAM +ROM ITS TYPES	Memory Storage Types	Data Show Projector	Homework
Fifth	2	MEMORY ORGANIZATION	Memory Organization	Data Show Projector	-
Sixth	2	RAM DESIGN+ CACHE MEMORY	RAM Design	Data Show Projector and Whiteboard	Report
Seventh	2	MAPPING FUNCTION IN CACHE	Cache Memory		Midterm Exam
Eighth	2	INTERLEAVE MEMORY+VIRTUAL MEMORY	Interleaving Memory	Data Show Projector and Whiteboard	Homework
Ninth	2	CPU ARCHITECTURE + CONTROL UNIT	CPU Architecture	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	INSTRUCTION MICROPROGRAM	Micro-programmed Control	Data Show Projector and Whiteboard	Quiz
Eleventh	2	INPUT OUTPUT DEVICE	Input-Output Design	Data Show Projector and Whiteboard	Homework
Twelfth	2	Define pipeline and its types	Pipelining	Data Show Projector and Whiteboard	Homework
Thirteenth	2	Define PARALLEL PROCESSING	Parallel Processing	Data Show Projector and Whiteboard	Quiz

Fourteenth	2	Type of PARALLEL PROCESSING	Multi-Computer sand Multiprocessors	Data Show Projector and Whiteboard	Project Discussion
Fifteenth	2	Review	Review	Review	Review

11. Infrastructure

A. Required textbooks	Computer architecture, Kai Hwang , McGraw-Hill,1988
B. Main References (Sources)	
C. Recommended books and references (scientific journals, reports, etc.)	Advanced computer architecture, second edition, Kai Hwang , McGraw-Hill,2011 COMPUTER ORGANIZATION AND ARCHITECTURE DESIGNING FOR PERFORMANCE , 2010,William Stallings
D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Data Structure (1) - CMCS23 F21061
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

An introduction to the main topics of data structures, focusing on the knowledge, importance, and practical applications of data structures. The course covers the study of arrays, queues, linked lists, applications, and more. This course uses a high-level language to implement the course. It aims to equip students with diverse programming skills that will qualify them for entry-level programming positions in the job market.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Understand the basic concepts and practical applications of data structures in programming.
2. Understand and implement link list, stack and queue data structures for organizing data.
3. Understand tree structures, implement binary trees, and perform tree traversals. Learn about balanced trees, implement AVL trees.
4. Understand heap and priority queue data structures for efficient data organization and prioritization.
5. Understand graph components and traversal techniques, such as DFS and BFS.
6. Implement hash tables for efficient data retrieval using hashing techniques.
7. Learn linear and binary search methods, implement them.

8. Implement selection sort, insertion sort, merge sort and quick sort algorithms and compare their efficiencies.
B - Course specific skill objectives ✓ B1 - Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- whiteboard ✓ 2- Smart board ✓ 3- Data projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). Developing the ability to work effectively in a team. Developing the ability for self-directed learning. Developing the ability to generate and discuss ideas. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Data types, operations on Data Structure, Types of Data Structure	Introduction to Data Structures	Whiteboard	-
Second	2	Arrays representation, Basic operations in Array, 2D Array	Arrays Data Structure	Data Show Projector	Homework
Third	2	Linked-List types, Basic operations in linked-List, Creating a linked-list	Linked-List Data Structure	Data Show Projector and Whiteboard	Quiz
Fourth	2	Creating a Circular linked-list Creating a Double linked-list	Circular and Double linked-list	Data Show Projector	Homework
Fifth	2	Stack Representation, Basic operation on stack, Stack applications	Stack Data Structure	Data Show Projector	-
Sixth	2	Expression notations, prefix expression notation using stack, postfix expression notation using stack	Expression Parsing & Evaluation using Stack	Data Show Projector and Whiteboard	Report
Seventh	2	Queue Representation, Queue basic operations, Circular Queue	Queue Data Structure		Midterm Exam
Eighth	2	Linear Search, Binary Search	Searching Techniques	Data Show Projector and Whiteboard	Homework
Ninth	2	Linear Probing, Hash function, Operations on Hash Table	Hash Table Data Structure	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Sorting techniques, Bubble Sort algorithm	Sorting techniques	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Quick Sort Pivot Algorithm, Evaluation of Quick Sort algorithm	Quick Sorting Algorithm	Data Show Projector and Whiteboard	Homework

Twelfth	2	Merge Sorting Algorithm, Evaluation of merge sort algorithm.	Merge Sorting Algorithm	Data Show Projector and Whiteboard	Homework
Thirteenth	2	Types of Tree Structure, Binary tree, Binary Search Tree, AVL Tree	Tree Data Structure	Data Show Projector and Whiteboard	Quiz
Fourteenth	2	Introduction to graph structure, Terms in Graph, Graph representations.	Graph Data Structure	Data Show Projector and Whiteboard	Project Discussion
Fifteenth	2	Review	Review	Review	Review

D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	System Analysis - CMCS23 F21071
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	3 theoretical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:
enable students to analysis existing systems and develop other new systems of system analysis and design by using different approaches and techniques.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Enhanced problem-solving skills: provide a structured approach to problem-solving, emphasizing critical thinking and analytical skills.
2. Proficiency in system development life cycle (SDLC): System analysis and design courses typically cover the SDLC, which is a standardized process for developing and maintaining information systems.
3. Ability to gather and document requirements: One crucial aspect of system analysis is gathering requirements from stakeholders.
4. Designing efficient and scalable systems: System design involves creating blueprints for software and hardware components, databases, user interfaces, and system architecture.
5. Improved communication and collaboration: emphasize the importance of effective communication with stakeholders, including users, developers, and project managers.

<p>6. Increased employability: Organizations across various industries require professionals who can analyze, design, and implement effective information systems.</p> <p>7. Knowledge of emerging technologies: cover emerging technologies and trends in the field.</p> <p>8. Improved project management skills: touch upon project management methodologies and techniques.</p>

5.Course/Year	Course system
6.Number of study hours (total)	3 theoretical + 1 tutorial (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:
introduce students to the principles of probability, probability distributions, and their application in computer science. It also introduces students to some of the theories and operations related to probability.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Calculate probabilities by applying probability laws and theoretical results.
2. Identify an appropriate probability distribution for a given discrete or continuous random variable and use its properties to calculate probabilities.
3. Calculate statistics such as the mean and variance of common probability distributions.
4. Calculate probabilities for joint distributions including marginal and conditional probabilities.
5. Determine whether random variables are independent and find their covariance and correlation.
6. Apply results from large-sample theory and the Central Limit Theorem to approximate a sampling distribution.
7. Explain the desirable properties of estimators.
8. Calculate and interpret maximum likelihood estimates and their confidence intervals.

9. Explain the role of probability in hypothesis testing and describe issues related to interpreting statistical significance.

5.Course/Year	Course system
6.Number of study hours (total)	3 theoretical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

Introduction to the basics of computational theory and the basics of language theory, and general concepts in constructing programming languages. It also enables the student to know the various operations that take place in languages. It also enables the student to know the basics of PDA and Turing machines.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Be able to describe languages according to formal systems such as automata and context-free grammars
2. Learn Chomsky and Greibach Normal Forms problems
3. Master the fundamentals of Push Down Automata
4. Master the fundamentals of Turing machines

B - Course specific skill objectives <ul style="list-style-type: none"> ✓ B1 - Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods

4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

Covering advanced concepts in data structures and how to design and analyze major types of algorithms. This course also focuses on computational complexity theory and how to calculate the big O code for various algorithms. This course uses a high-level language in its implementation and aims to graduate students with programming skills that qualify them for the job market as programmers.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Implement basic numerical algorithms, search algorithms and sorting algorithms.
2. Discuss the runtime and memory efficiency of principal algorithms.
3. Describe the implementation of hash tables.
4. Solve problems using fundamental graph algorithms.
5. Assess and select an algorithm and justify the selection, and then apply the algorithm to a certain problem.
6. Implement a string-matching algorithm.
7. Design a deterministic finite state automaton to accept a specified language.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Visual Programming - CMCS24 F22051
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Be familiar with the general characteristics of the GUI.
2. Understand the important conceptual level issues associated with good interface design.
3. Understand the purpose of toolkits and high-level class libraries, and be able to write significant programs using the WPF.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Codes basic programs in XAML.
2. Explains and uses Layout & Content controls
3. Explains and uses Button control
4. Explains and uses TextBox control
5. Explains and uses Label control
6. Explains and uses RadioButton control
7. Explains and uses CheckBox control
8. Explains and uses ListBox control
9. Explains and uses ComboBox control
10. Explains and uses Menu control
11. Explains and uses Events and Commands

12. Explains and uses Resources and Themes 13. Explains and uses Data Binding 14. Explains and uses Animation and Media
B - Course specific skill objectives ✓ B1 - Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- whiteboard ✓ 2- Smart board ✓ 3- Data projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). Developing the ability to work effectively in a team. Developing the ability for self-directed learning. Developing the ability to generate and discuss ideas. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	What is Visual Programming	Introduction	Whiteboard	-
Second	2	What is GUI, UI	GUI	Data Show Projector	Homework
Third	2	Event handling & simple event Driven GUI	Event handling & simple event Driven GUI	Data Show Projector and Whiteboard	Quiz
Fourth	2	Python Libraries for GUI (Python GUI Frameworks for Developers), what is Tkinter	Python Libraries for GUI	Data Show Projector	Homework
Fifth	2	Adding widgets to our application (to GUI form)	Buttons , picture Boxes	Data Show Projector	-
Sixth	2	Adding widgets to our application (to GUI form) List Box, c checkboxes and Radio Buttons	List Box, checkboxes and Radio Buttons	Data Show Projector and Whiteboard	Report
Seventh	2	Controlling Tkinter Application Layout Geometry Manager - Tkinter pack ()	Python Tkinter Geometry Manager		Midterm Exam
Eighth	2	Geometry Manager - Tkinter grid()- Geometry Manager - Trinket place()	Python Tkinter Geometry Manager	Data Show Projector and Whiteboard	Homework
Ninth	2	Changing window size and location, Transparency of window, Window stacking order	Changing window size and location	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Tkinter Label widget in Python options, methods, examples	Tkinter Label widget in Python	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Pad and pad fill Option	Pad and pad fill Option	Data Show Projector and Whiteboard	Homework
Twelfth	2	Tkinter Frame widget in	Tkinter Frame widget in Python	Data Show Projector	Homework

		Python options, methods, examples		and Whiteboard	
Thirteenth	2	Tkinter Frame widget in Python options, methods, examples	Tkinter Button widget in Python	Data Show Projector and Whiteboard	Quiz
Fourteenth	2	Menu application, menu form, options, methods, examples	Tkinter Menu widget in Python	Data Show Projector and Whiteboard	Project Discussion
Fifteenth	2	Review	Review	Review	Review

11. Infrastructure

A. Required textbooks	Pro C# 7: With .NET and .NET Core
B. Main References (Sources)	Visual Studio Code for Python Programmers Learn Python Visually: Creative Coding with Processing. py by Tristan Bunn Visual Studio Code for Python Programmers. Learn Python 3.0 VISUALLY.
C. Recommended books and references (scientific journals, reports, etc.)	WPF 4 Unleashed by Adam Nathan
D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Advanced Calculus - CMCS24 F22061
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	3 theoretical + 2 tutorials (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

Teaching computer science students the mathematical fundamentals required for computer science programmers, with a focus on practical issues and away from the theoretical aspects typically studied by mathematics students.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Identify and apply mathematical methods applicable to the differentiation and integration of functions of several variables and to ordinary differential equations.
2. Apply appropriate mathematical fundamentals to solve a specific mathematical problems involving functions of many variables.
3. Apply mathematical models involving multivariable calculus and ordinary differential equations to solve mathematical problems.
4. Effectively communicate and interpret solutions to mathematical modeling problems.

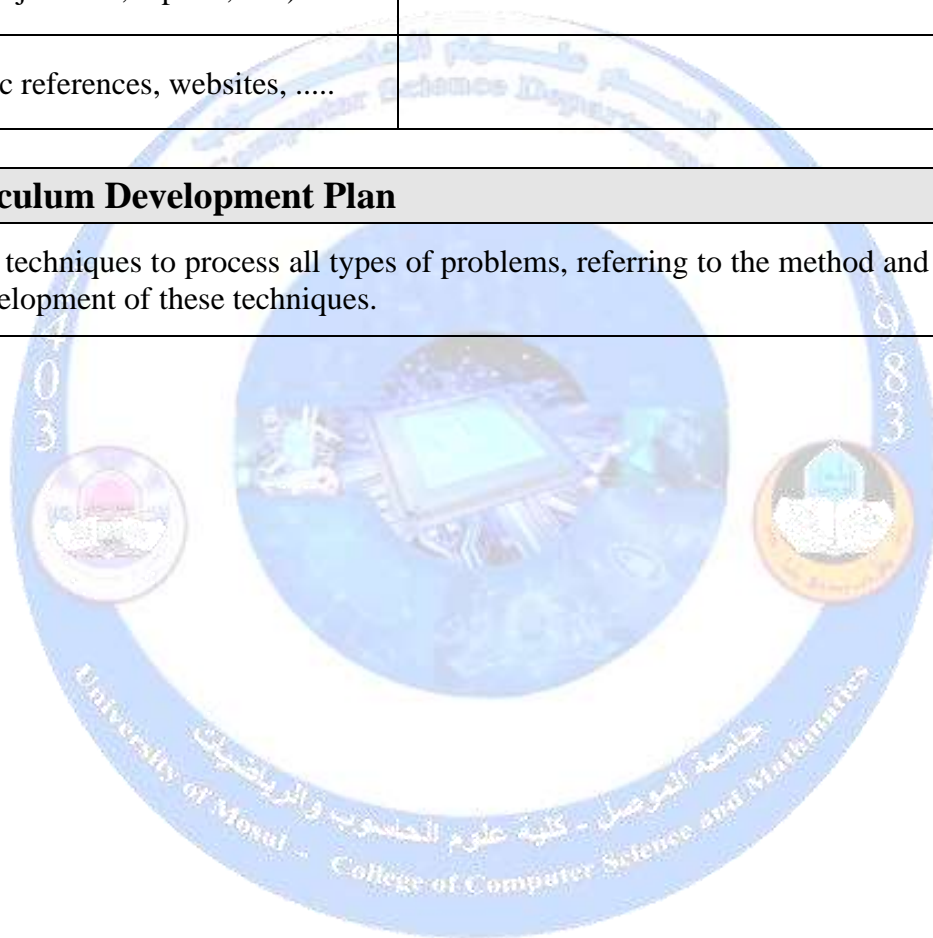

B - Course specific skill objectives <ul style="list-style-type: none"> ✓ B1 - Theoretical B2 – Practical B3 - Summer training B4 - Graduation research

3.Course Name/Code	System Programming - CMCS24 F22031
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

Teaching second-year students computer systems programming, its vocabulary, and the components it contains, which include all software operating within the system phase, starting with the operating system, its types and components, passing through the assembler, linker, debugger, compiler, interpreter, and other system software. In addition, students are taught system calls, the difference between the processor and threads, as well as the boot process mechanism and BIOS settings, in addition to interrupts, exception handling, and other types of interfaces.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Understand the internal operation of Linux system such as: process, program, process groups, signals, running programs, address space, user and kernel modes, system calls and context switching.
2. Produce medium complexity shell scripts to automate repetitive tasks.
3. Write simple C programs similar to standard Linux utilities(mv, rm...) using Linux system calls.
4. Identify the central role of concurrency in systems programming and produce programs which

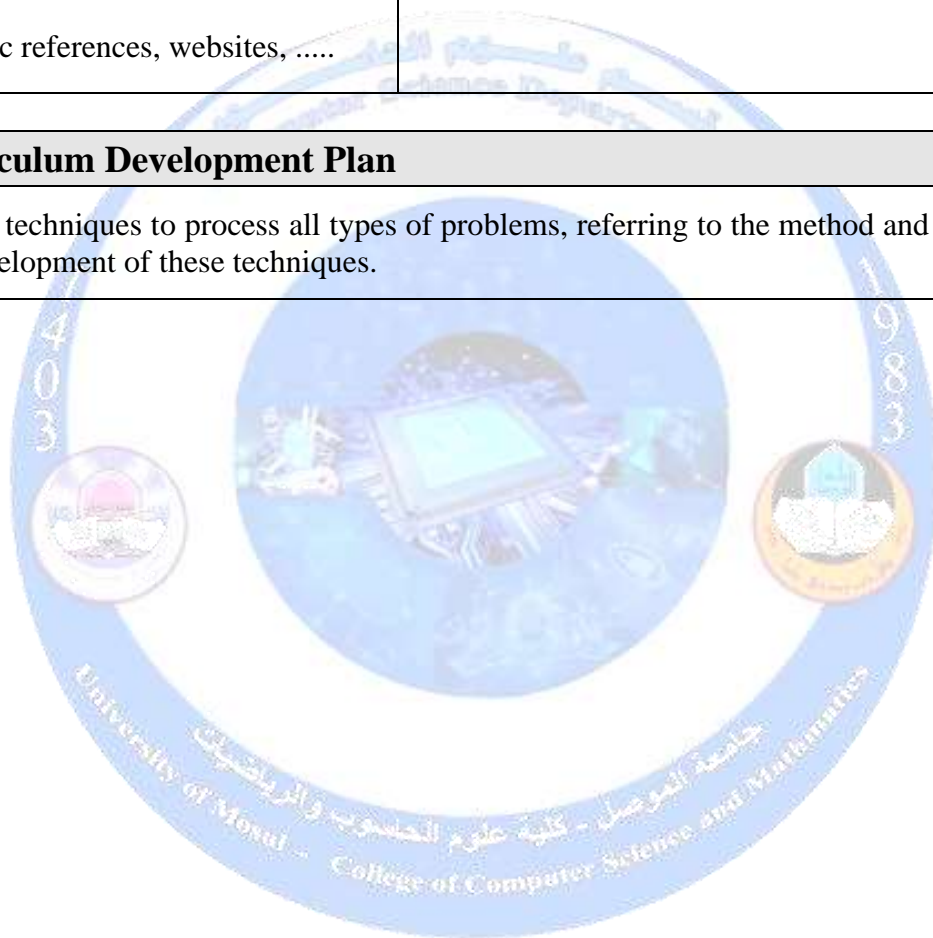

<p>generate, link and control multiple processes</p> <p>5. Write a more sophisticated programs by making an efficient use of the OS services and reusing the existing system utilities.</p>
<p>B - Course specific skill objectives</p> <ul style="list-style-type: none"> ✓ B1 - Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research

11. Infrastructure	
A. Required textbooks	UNIX and Linux System Administration Handbook , OS concept
B. Main References (Sources)	System Programming , Unix OS , Linux OS , Introduction to System Programming
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan
Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	English Language (2) - CMCS24 F22071
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical (2 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

6. To be able to speak English fluently and accurately.
7. To think in English and then speak.
8. To be able to talk in English.
9. To be able to compose freely and independently in speech and writing.
5. To be able to read books with understanding.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

7. To address grammar issues that students encounter in their daily speech, writing, reading and listening
8. To address the issue of grammatical errors that affect effective communication
9. To improve your reading skills through the practice of vocabulary enrichment, reading comprehension exercises, written responses, discussions, and reflections
10. Recognize the structure and organization of paragraphs,
11. Use strategies to think critically about reading and use appropriate technology to enhance reading comprehension, and vocabulary development.
6. Develop the writing skill.

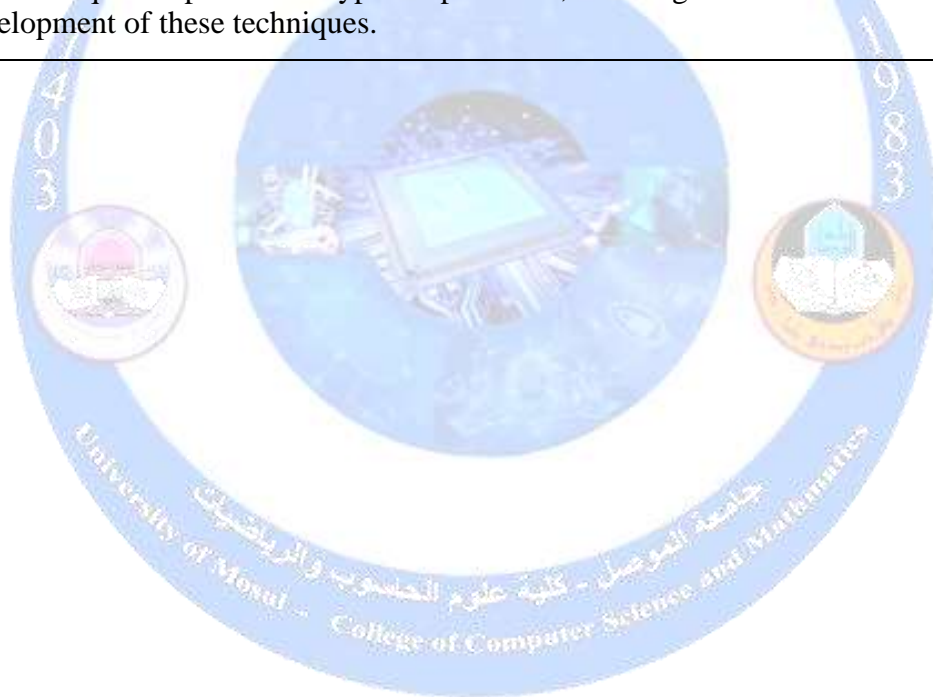

B - Course specific skill objectives ✓ B1 - Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- whiteboard ✓ 2- Smart board ✓ 3- Data projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). Developing the ability to work effectively in a team. Developing the ability for self-directed learning. Developing the ability to generate and discuss ideas. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Present simple	Tenses	Whiteboard	-
Second	2	Past simple	Tenses	Data Show Projector	Homework
Third	2	A passage: for vocabulary and reading comprehension	Reading	Data Show Projector and Whiteboard	Quiz
Fourth	2	How to make a question and negative	Tenses	Data Show Projector	Homework
Fifth	2	Present Progressive	Tenses	Data Show Projector	-
Sixth	2	Past Progressive	Tenses	Data Show Projector and Whiteboard	Report
Seventh	2	Present Perfect	Tenses		Midterm Exam
Eighth	2	Past perfect	Tenses	Data Show Projector and Whiteboard	Homework
Ninth	2	Present Perfect Progressive	Tenses	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Past perfect Progressive	Tenses	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Types of pronouns	Pronouns	Data Show Projector and Whiteboard	Homework
Twelfth	2	Types of pronouns	Pronouns	Data Show Projector and Whiteboard	Homework
Thirteenth	2	Discuss the homework	Tenses	Data Show Projector and Whiteboard	Quiz
Fourteenth	2	Exam	Exam	Data Show Projector and Whiteboard	Project Discussion
Fifteenth	2	Review	Review	Review	Review

11. Infrastructure	
A. Required textbooks	Headway pre-intermediate plus student's book (John and Liz Soars)
B. Main References (Sources)	Headway pre-intermediate plus work's book
C. Recommended books and references (scientific journals, reports, etc.)	English for Computer Science by Norma D. Mullen and P. Charles Brown, Oxford University Press
D. Electronic references, websites,	https://7esl.com/

12. Curriculum Development Plan
Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

The background of the page features a large, faint, circular logo of the University of Mosul. The logo is blue and white, with the university's name in Arabic and English around the perimeter. In the center, there is a depiction of a building and a globe. The text "Computer Science Department" is visible at the top of the logo, and "College of Computer Science and Mathematics" is at the bottom. The year "1981" is also present on the right side of the logo.

Curriculum description for the third year

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Compilers (1) - CMCS23 F31011
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

2. Be able to build a compiler for a (simplified) (programming) language
3. Know how to use compiler construction tools, such as generators of scanners and parsers
4. Be familiar with assembly code and virtual machines
5. Be able to define LL(1), LR(1), and SLR(1) grammars
6. Be familiar with compiler analysis and optimization techniques.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

2. Understand the principles guiding all aspects of the compilation process.
3. Recognize the function of each of the fundamental components of a conventional compiler.
4. Demonstrate familiarity with compiler front-end concepts, such as lexical analysis, syntactic analysis, semantic analysis, type checking, symbol tables, and so on.
5. Demonstrate understanding of compiler back-end theory, such as intermediate code generation, run-time organization, code generation, optimization, data flow analysis, and so on.
6. Demonstrate the ability to implement a portion of a high-level language compiler.

B - Course specific skill objectives ✓ B1 - Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	First & follow set	Constructing Parsing table	Whiteboard	-
Second	2	Disambiguating grammar	Ambiguous grammar	Data Show Projector	Homework
Third	2	Top-down Parser, and Bottom-up Parser.	Types of parsers in compiler design	Data Show Projector and Whiteboard	Quiz
Fourth	2	Shift-reduce parsers	Bottom-up Parser	Data Show Projector	Homework
Fifth	2	Simple LR parser	Bottom-up Parser	Data Show Projector	-
Sixth	2	SLR	Bottom-up Parser	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam
Eighth	2	Syntax-Directed Translation Inherited and Synthesized Attributes	Syntax-Directed Translation	Data Show Projector and Whiteboard	Homework
Ninth	2	Static and Dynamic Semantics, Semantic Errors	Semantic Analysis	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Type Checking	Semantic Analysis	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Postfix Notation, Three-Address Code, Syntax Tree	Intermediate-code Generation	Data Show Projector and Whiteboard	Homework
Twelfth	2	Issues in the design of a code generator	Intermediate-code Generation	Data Show Projector and Whiteboard	Homework
Thirteenth	2	Instruction Selection, Register Allocation, Evaluation orders	Introduction of Object Code in Compiler	Review	Review
Fourteenth	2	Code Optimization in Compiler Design	Code Optimization	Data Show Projector and Whiteboard	Quiz

Fifteenth	2	Machine Independent Code optimization in Compiler Design	Machine Independent Code optimization	Data Show Projector and Whiteboard	Project Discussion
------------------	---	--	---------------------------------------	------------------------------------	--------------------

11. Infrastructure

A. Required textbooks	Basics of Compiler Design, Torben E. Mogensen, 2009.
B. Main References (Sources)	1-The Essence of Compilers by Roben Hunter, Prentice–Hall 1999 . 2- Compilers , principles , Techniques and tools by Aho,Lam, Sethi and Ullman, 2 nd Ed. Addison – Wesely , 2007.
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Database (1) - CMCS23 F31021
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. To develop data analyzing skills.
2. To understand database principles and its application fields.
3. This course deals with the basic concept of database systems.
4. This is the basic subject for all database systems and their applications.
5. To understand database management system and database models.
6. To perform one of a database system project.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Recognize general definitions of database and its characteristics.
2. List the roles of database management systems.
3. Summarize the data independence characteristic in database systems.
4. Discuss the views of the database system
5. Describe Conceptual, logical, physical levels of database system.
6. Define Network architecture and database system.
7. Identify general view of Entity Models.
8. Discuss candidate keys and focus on Primary Key.
9. Explain basics Entity-Relational model.
10. Discuss Normalization and Normal Form.
11. Identify the basic concepts of Relational Algebra.

12. Discuss ACID properties and Transactions. 13. Discuss 12 Codd's roles. 14. Revise the database principles.
B - Course specific skill objectives ✓ B1 - Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	General definitions of database and its characteristics.	Database System Concepts	Whiteboard	-
Second	2	The role of database management systems.	DBMS and its Components	Data Show Projector	Homework
Third	2	The data independence characteristic in database systems.	Data Independence	Data Show Projector and Whiteboard	Quiz
Fourth	2	The views of the database system.	Database Architectures	Data Show Projector	Homework
Fifth	2	Conceptual, logical, physical levels of database system.	The Three Levels of the Architecture	Data Show Projector	-
Sixth	2	Network architecture and database system.	Client-Server Architecture	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam
Eighth	2	General view of Entity Models with focus on relational database.	The Entity Relationship Data Model	Data Show Projector and Whiteboard	Homework
Ninth	2	Explain basics Entity-Relational model.	Conceptual Design with ER Model	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Explain basics Entity-Relational model.	Conceptual Design with ER Model	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Candidate keys and focus on Primary Key.	Constraints and Keys	Data Show Projector and Whiteboard	Homework
Twelfth	2	General definitions of database and its characteristics.	Database System Concepts	Data Show Projector and Whiteboard	Homework
Thirteenth		Basic concepts of Relational Algebra.	Relational Algebra	Review	Review

Fourteenth	2			Data Show Projector and Whiteboard	Quiz
Fifteenth	2	Basic concepts of Relational Algebra.	Relational Algebra	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A. Required textbooks	Modern Database Management Systems ,Fred R. McFadden, 10th ed , Addison –Wesly , 2015
B. Main References (Sources)	Database system concepts, by Silberschatz, Korth and Sudarshan, 7th ed, McGraw-Hill, 2019
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Software Engineering - CMCS23 F31031
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. To introduce students to the concept of software engineering and the necessary activities for producing various systems.
2. To teach students how to design software to solve complex problems by understanding software engineering methods and development phases.
3. To enable students to use the Enterprise Architect program, a UML modeling tool, to manage and design large projects through the use of diagrams for analyzing, designing, and testing large systems.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to:

1. Understanding the meaning of software engineering and its goals.
2. Understanding the various software process models and their applications.
3. Analyzing and selecting the appropriate process model for a business system.
4. Identifying and specifying the requirements for application development and create a Software Requirements Specification (SRS) document.
5. Understanding different software design techniques and architectural styles.
6. Developing and design efficient, reliable, and cost-effective software solutions.
7. Applying software testing approaches and using metrics in the software development process.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Introduction	Software definition, applications and problems. Software engineering definition.	Whiteboard	-
Second	2	Software Process	The conflicting and complementary goals of SWE. Water fall Model	Data Show Projector	Homework
Third	2	Software engineering paradigms	Prototyping. Evolutionary development. Formal systems development.	Data Show Projector and Whiteboard	Quiz
Fourth	2	Software Requirements	Objectives. Requirements Engineering Process. Types of Requirements .Software Requirement Specification. Software Requirement Validation.	Data Show Projector	Homework
Fifth	2	Analysis Model	Analysis Model Types and examples .Formal Specifications. Formal methods. Formal Specification Languages.	Data Show Projector	-
Sixth	2	Software Design	Design and Quality. Software Design Levels. Fundamental Design Concepts	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam
Eighth	2	Functional independence	Definition. Cohesion and its types. Coupling and its types. Effective Modular Design.	Data Show Projector and Whiteboard	Homework
Ninth	2	Design elements	Data, Architectural and procedural design. Top-Down and Bottom-Up Design. Structured Design. Transform and Transaction Mapping	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Software Testing	Definition and Objectives. Exhaustive Testing. Test case design. Software Testing Strategies	Data Show Projector and Whiteboard	Quiz
Eleventh	2	White Box Testing	Basis path testing. Basis path method with examples.	Data Show Projector	Homework

			Condition testing. Data flow testing. Loop testing	and Whiteboard	
Twelfth	2	Black Box Testing	Black box testing techniques.	Data Show Projector and Whiteboard	Homework
Thirteenth		SW management	Software Project definition and goal.	Review	Review
Fourteenth	2	Project Scheduling	Resource management. Project Execution & Monitoring. Project Management Tools.	Data Show Projector and Whiteboard	Quiz
Fifteenth	2	Revision	Revision	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A. Required textbooks	Software engineering A practitioner's approach, Third Edition, Roger S. Pressman, 2005.
B. Main References (Sources)	1. Software engineering, Eighth Edition, Ian Sommerville, 2007. 2. Enterprise Architect User Guide, by Geoffrey Sparks, 2009.
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Encryption - CMCS23 F31041
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Knowing the concept of cryptography and its basic components and types.
2. Knowing the types of threats that faced the transmitted messages sent by two parties.
3. Knowing the basic types of the encryption algorithms, the difference between these types, and where each type is used
4. The ability to encrypt and decrypt a text message with the most popular classic algorithms.
5. The ability to encrypt and decrypt a text message in the most modern, and simplified algorithms.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. The student should have full knowledge of basic terms related to cryptography and the types of cryptography.
2. The student should have full knowledge of the types of threats that may face the data and distinguish between every type.
3. The ability of the student to encrypt / decrypt any text message in the famous classic algorithms (transposition algorithms).
4. The ability of the student to encrypt / decrypt any text message in the famous classic algorithms (substitution algorithms).

<ol style="list-style-type: none"> 5. The student should have full knowledge of stream cipher and random number generator using the linear feedback shift registers. 6. The student should have full knowledge of stream cipher and random number generator using the non-linear feedback shift registers. 7. The student should have full knowledge of number theory and can calculate the important theory which is used in modern algorithms. 8. The students should know the meaning of block cipher algorithms and have a deep idea about simplified one. 9. The students should know the meaning of public key cipher algorithms and decode using the simple encryption methods (RSA).
B - Course specific skill objectives <ul style="list-style-type: none"> ✓ B1 - Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research

8.Course objectives

The course aims to:

1. Introduce students to the concept and principles of management.
2. Familiarize students with different schools of management thought.
3. Explain key management theories and their applications.
4. Equip students with knowledge of the fundamentals and practices of administrative work.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Demonstrate an understanding of the fundamental concepts and principles of management.
2. Identify and compare different schools of management thought.
3. Analyze key management theories and their practical applications.
4. Apply basic administrative principles and practices in real-world scenarios.

D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Operation Research - CMCS123 F31061
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	3 theoretical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Introduce students to the nature of Operations Research and its historical development.
2. Familiarize students with Operations Research tools, including Linear Programming, Transportation Models, Inventory Models, and others.
3. Enable students to formulate a Linear Programming model.
4. Equip students with the skills to solve Linear Programming models using the Graphical Method, Simplex Method, and Big-M Method.
5. Introduce students to the Dual Model (or Dual Problem).
6. Enable students to solve the Dual Model using the Dual Simplex Method.
7. Familiarize students with Transportation Models and the process of formulating a transportation model.
8. Enable students to solve Transportation Models using the North-West Corner Method and the Least Cost Method.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Explain the nature and historical development of Operations Research.
2. Identify and utilize key Operations Research tools, including Linear Programming, Transportation Models, and Inventory Models.
3. Formulate Linear Programming models for real-world problems.
4. Solve Linear Programming problems using the Graphical Method, Simplex Method, and Big-M Method.

5. Describe the concept of the Dual Model and its significance. 6. Apply the Dual Simplex Method to solve dual problems. 7. Develop and analyze Transportation Models for optimization. 8. Solve Transportation Models using the North-West Corner Method and the Least Cost Method.
B- Course specific skill objectives ✓ B1 - Theoretical B2 – Practical B3 - Summer training B4 - Graduation research

Ninth	2	مقدمة عن نماذج النقل، كيفية تكوين نموذج النقل، إعطاء	نماذج النقل	Data Show Projector and	Prepare a report

		أمثلة لتوضيح آلية تكوين نموذج النقل		Whiteboard	
Tenth	2			Data Show Projector and Whiteboard	Quiz
Eleventh	2	مقدمة عن طرائق حل نماذج النقل	طرائق حل نماذج النقل	Data Show Projector and Whiteboard	Homework
Twelfth	2	شرح خطوات طريقة الركن الشمالي الغربي	طرائق حل نماذج النقل	Data Show Projector and Whiteboard	Homework
Thirteenth		إعطاء أمثلة وحلها بطريقة الركن الشمالي الغربي	طرائق حل نماذج النقل	Review	Review
Fourteenth	2	مقدمة عن طريقة أقل الكلف، شرح خطوات طريقة أقل الكلف	طريقة أقل الكلف	Data Show Projector and Whiteboard	Quiz
Fifteenth	2	إعطاء أمثلة وحلها بطريقة أقل الكلف	طريقة أقل الكلف	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A. Required textbooks	١. مدخل الى بحوث العمليات / حامد الشمرتي وعلي الزبيدي
B. Main References (Sources)	١. بحوث العمليات / حمدي طه (مترجم) ٢. بحوث العمليات / عبد ذياب جزاع
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Compiler2 - CMCS24 F32011
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Be able to build a compiler for a (simplified) (programming) language
2. Know how to use compiler construction tools, such as generators of scanners and parsers
3. Be familiar with assembly code and virtual machines
4. Be able to define LL(1), LR(1), and SLR(1) grammars
5. Be familiar with compiler analysis and optimization techniques.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Understand the principles guiding all aspects of the compilation process.
2. Recognize the function of each of the fundamental components of a conventional compiler.
3. Demonstrate familiarity with compiler front-end concepts, such as lexical analysis, syntactic analysis, semantic analysis, type checking, symbol tables, and so on.
4. Demonstrate understanding of compiler back-end theory, such as intermediate code generation, run-time organization, code generation, optimization, data flow analysis, and so on.
5. Demonstrate the ability to implement a portion of a high-level language compiler.

B- Course specific skill objectives ✓ B1 - Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure					
Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	First & follow set	Constructing Parsing table	Whiteboard	-
Second	2	Disambiguating grammar	Ambiguous grammar	Data Show Projector	Homework
Third	2	Top-down Parser, and Bottom-up Parser.	Types of parsers in compiler design	Data Show Projector and Whiteboard	Quiz
Fourth	2	Shift-reduce parsers	Bottom-up Parser	Data Show Projector	Homework
Fifth	2	Simple LR parser	Bottom-up Parser	Data Show Projector	-
Sixth	2	SLR	Bottom-up Parser	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam
Eighth	2	Syntax-Directed Translation Inherited and Synthesized Attributes	Syntax-Directed Translation	Data Show Projector and Whiteboard	Homework
Ninth	2	Static and Dynamic Semantics, Semantic Errors	Semantic Analysis	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Type Checking	Semantic Analysis	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Postfix Notation, Three-Address Code, Syntax Tree	Intermediate-code Generation	Data Show Projector and Whiteboard	Homework
Twelfth	2	Issues in the design of a code generator	Intermediate-code Generation	Data Show Projector and Whiteboard	Homework
Thirteenth		Instruction Selection, Register Allocation, Evaluation orders	Introduction of Object Code in Compiler	Review	Review
Fourteenth	2	Code Optimization in Compiler Design	Code Optimization	Data Show Projector and Whiteboard	Quiz

Fifteenth	2	Machine Independent Code optimization in Compiler Design	Machine Independent Code optimization	Data Show Projector and Whiteboard	Project Discussion
------------------	---	--	---------------------------------------	------------------------------------	--------------------

11. Infrastructure

A. Required textbooks	Basics of Compiler Design, Torben E. Mogensen, 2009.
B. Main References (Sources)	1-The Essence of Compilers by Roben Hunter, Prentice–Hall 1999 . 2- Compilers , principles , Techniques and tools by Aho,Lam, Sethi and Ullman, 2 nd Ed. Addison – Wesely , 2007.
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. To give a thorough understanding of AI principles, algorithms, and methods.
2. To gain practical experience in creating AI systems.
3. To cover a wide range of subjects and provide an introduction to AI.
4. To go deeper into issues like heuristic and blind search techniques.
5. Investigating inference rules and proof methodologies, predicate logic, propositional logic, and semantic networks, Conceptual graphs and Frames as models and representations of knowledge
6. To successfully use intelligent systems, such as reasoning engines and expert systems and understanding of artificial neural networks.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Understand the underlying ideas and fundamental concepts of artificial intelligence.
2. Use and apply search algorithms by use heuristic and blind techniques.
3. Create and use knowledge representation in intelligent systems.
4. List representation and arithmetic operator notation
5. Representing a non-deterministic automata in simulation.
6. Evaluate and assess the performance of artificial intelligence .
7. Design Expert system.
8. Learn about artificial neural networks.

First	2	Introduction to Artificial Intelligence. Languages and Environments for AI. AI Application Areas. Characteristics of Artificial Intelligence. Data, Information, and Knowledge.	Introduction to Artificial Intelligence	Whiteboard	-
Second	2	Search Methods. Structures for state space. State Space represented of problems. State Space Search.	Search Methods	Data Show Projector	Homework
Third	2	Traveling Salesperson Problem. Water Jug Problem. Coins Problem. sliding-tile puzzle problem.	State Space Search Problem	Data Show Projector and Whiteboard	Quiz
Fourth	2	Blind search. Depth-First Search. Depth first search (DFS) method. Depth first search (DFS) algorithm. Depth first search (DFS) problems. Advantages of DFS. disadvantages of DFS.	Systematic Search (Blind search)	Data Show Projector	Homework
Fifth	2	Breadth first search (BFS). Breadth first search (BFS) method. Breadth first search (BFS) algorithm. Breadth first search (BFS) problems. Advantages of BFS disadvantages of BFS.	Systematic Search (Blind search)	Data Show Projector	-
Sixth	2	Hybrid first search (HFS). Hybrid first search (HFS) method. Hybrid first search (HFS) algorithm. Hybrid first search (HFS) problems. Advantages of HFS disadvantages of HFS.	Systematic Search (Blind search)	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam

Eighth	2	Heuristic Search Techniques. Heuristic search methods. Generate and test. Hill climbing search. Hill climbing search Algorithm. Problems with hill climbing. To solving problems for hill climbing search. Best first search. A* algorithm	Heuristic Search	Data Show Projector and Whiteboard	Homework
Ninth	2	Knowledge Representation. Logic Representation. Propositional Logic. Predicate Logic.	Knowledge Representation	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Some examples of knowledge representation. Clause form. Convert to clause form.	Propositional Logic And Predicate Logic	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Network Representation. Semantic Network. Examples of Semantic Network. Abstract objects.	Network Representation	Data Show Projector and Whiteboard	Homework
Twelfth	2	Conceptual Graph. Operations on Conceptual Graphs. Negation of conceptual graph. Representing propositions by conceptual graph.	Network Representation	Data Show Projector and Whiteboard	Homework
Thirteenth		Frames. Some examples to Network Representation by Frames. Advantages and disadvantages of knowledge representation methods	Network Representation Frames	Review	Review
Fourteenth	2	Expert System. What are Expert Systems(ES). Architecture of Expert System. Expert System classes.	Expert System	Data Show Projector and Whiteboard	Quiz

Fifteenth	2	Artificial Neural Networks (ANNs). Introduction for ANNs. Biological Neural Network. Artificial Neuron. Learning in Neural Networks. Properties of A.N.N. Important A.N.N. parameter.	Artificial Neural Networks	Data Show Projector and Whiteboard	Project Discussion
------------------	---	---	----------------------------	------------------------------------	--------------------

11. Infrastructure

A. Required textbooks	Artificial Intelligence Aguide for Thinking Humans(Melanie Matchell, 2019).
B. Main References (Sources)	<ul style="list-style-type: none"> AI Super Power(Kai- Fu Lee, 2018). Fundamentals of Artificial Intelligence Book by K. R. Chowdhary, 2020
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Database (2) - CMCS24 F32031
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Introduce students to the concept of databases and their purpose in computer science.
2. Provide an overview of database management systems (DBMS).
3. Teach students how to program databases using SQL.
4. Explain the logical and physical representation of data.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Understand the concept of databases and their significance in computer science.
2. Demonstrate knowledge of database management systems (DBMS) and their functions.
3. Develop the ability to write SQL queries to program and manage databases.
4. Understand and apply the principles of logical and physical data representation.

B- Course specific skill objectives

✓ B1 - Theoretical

✓ B2 – Practical

B3 - Summer training

B4 - Graduation research

Teaching and learning methods

<ul style="list-style-type: none"> ✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
<ul style="list-style-type: none"> ✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals <ul style="list-style-type: none"> ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
<ul style="list-style-type: none"> ✓ 1- Theoretical lectures ✓ 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
<ul style="list-style-type: none"> ✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). <ol style="list-style-type: none"> 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Giving an overview of concepts that dedicated for DBMSs	Database System Concepts Overview	Whiteboard	-
Second	2	Detailed introduction of LDBMS's and introducing the relational model.	Logical database Design and the Relational Database Design	Data Show Projector	Homework
Third	2	Transforming EERD Into Relations - Part One	Transforming EER into Relations	Data Show Projector and Whiteboard	Quiz
Fourth	2	Transforming EER Into Relations - Part Two		Data Show Projector	Homework
Fifth	2		Review and Quiz	Data Show Projector	-
Sixth	2	Defining what are the anomalies that might be found in relations and how it affects the integrity and consistency of data,	Introduction to Normalization	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam
Eighth	2	First, Second, and Third Normal forms, Decomposition and FDs Preservation	Introduction to Normalization	Data Show Projector and Whiteboard	Homework
Ninth	2	Physical Database Design and Denormalization- Part 1	Physical Database Design and Denormalization	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Physical Database Design and Denormalization- Part 2	Physical Database Design and Denormalization	Data Show Projector and Whiteboard	Quiz
Eleventh	2		Mid-Term Quiz	Data Show Projector and Whiteboard	Homework
Twelfth	2	Boyce-Codd Normal Form	Additional Normal Forms	Data Show Projector and Whiteboard	Homework
Thirteenth		Multivalued Dependency and Fourth Normal Form	Additional Normal Forms	Review	Review
Fourteenth	2	Concurrency, Concurrency Problems Locking, Deadlock	Concurrency, Concurrency Problems Locking, Deadlock	Data Show Projector	Quiz

				and Whiteboard	
Fifteenth	2	Transaction Management, ACID properties	Transaction Management, ACID properties	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A. Required textbooks	Hoffer, J. A., V. Ramesh, Heikki Topi. (2011). Modern Database Management, 10 th Edition: Pearson Education India.
B. Main References (Sources)	Avi Silberschatz, Henry F. Korth and S. Sudarshan (2019) . Database System Concepts, 7 th Edition: McGraw-Hill.
C. Recommended books and references (scientific journals, reports, etc.)	
D. Electronic references, websites,	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Digital Signal Processing - CMCS24 F32051
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 Tutorial (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Provide students with a comprehensive understanding of various topics related to digital signal processing.
2. Introduce the fundamentals of digital signal processing and its key components.
3. Explain the basic system components involved in digital signal processing.
4. Teach students about different types of signals and operations in digital signal processing.
5. Introduce concepts of transformations and filtering techniques used in signal processing.
6. Cover other Core topics related to digital signal processing.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Demonstrate a comprehensive understanding of digital signal processing (DSP) concepts and techniques.
2. Identify and explain the key components of digital signal processing systems.
3. Analyze and apply different types of signals and operations in DSP.
4. Apply transformations and filtering techniques in signal processing.
5. Understand and explain other Core topics related to digital signal processing.

B- Course specific skill objectives ✓ B1 - Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures 2- laboratories ✓ 3- Fact-findings and investigation 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Analog, Digital, ASP & DSP, Roots of DSP, Advantages & Disadvantages	Introduction to DSP	Whiteboard	-
Second	2	Input, Output, ADC, DCA, LPF, Signal-Conditioning Circuit	DSP System General Model	Data Show Projector	Homework
Third	2	Deterministic, Non-deterministic, Multi-Channel, Multi-Dimensional, Applications, A/D and D/A Conversion, Quantization Error, Representing Signal	Categorization of Signals	Data Show Projector and Whiteboard	Quiz
Fourth	2	Step, Impulse, Signum, Exponential, Ramp, Parabolic, Rectangular, Triangular, Sinusoidal	Types of Signals	Data Show Projector	Homework
Fifth	2	Scaling, Addition, Subtraction, Multiplication, Shifting, Reversal	Basic Operations on Signals	Data Show Projector	-
Sixth	2	Sketching the Operations	Other Operations on Signals	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam
Eighth	2	Static, Dynamic, Causal, Non-Causal, Anti-Causal, Bounded, Unbounded, Linear, Nonlinear	DSP Systems	Data Show Projector and Whiteboard	Homework
Ninth	2	Linear, Circular, By Equation, By Table	Convolution	Data Show Projector and Whiteboard	Prepare a report
Tenth	2			Data Show Projector and Whiteboard	Quiz
Eleventh	2		Mid-Term Quiz	Data Show Projector	Homework

				and Whiteboard	
Twelfth	2	Standard, Normalized	Correlation	Data Show Projector and Whiteboard	Homework
Thirteenth		Types, Operations	Complex Numbers	Review	Review
Fourteenth	2	Conversion From Spatial to Frequency Domain	Discrete Fourier Transform	Data Show Projector and Whiteboard	Quiz
Fifteenth	2	Conversion From Frequency to Spatial Domain	Discrete Fourier Transform & Its Inverse	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A. Required textbooks	Khan, M. N., Hasnain, S. K., & Jamil, M. (2016). Digital Signal Processing: A Breadth-first Approach. Stylus Publishing, LLC.
B. Main References (Sources)	Antoniou, A. (2006). Digital signal processing. Toronto, Canada: McGraw-Hill.
C. Recommended books and references (scientific journals, reports, etc.)	Tan, L., & Jiang, J. (2018). Digital signal processing: fundamentals and applications. Academic Press.
D. Electronic references, websites,	Internet Resources.

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 Practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. This course illustrates the concepts of operating systems.
2. how to design Operating Systems and install.
3. To describe the operational and practical behavior.
4. Processes and methods of scheduling between them.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Role and purpose of the operating system.
2. History of operating system development.
3. Functionality of typical operating systems.
4. Structuring methods(monolithic, layered, modular, micro kernel models)
5. Device organization
6. Interrupt: methods and implementations
7. Concept of user/system state and protection ,transition to kernel mode
8. Process
9. Schedulers and policies
10. Preemptive and non-preemptive scheduling.

7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Introduce students to the main concepts of Computational Mathematics.
2. Provide an understanding of basic topics such as points, lines, and circles.
3. Explain coordinate systems and their applications in computational mathematics.
4. Teach students about 2D and 3D transformations.
5. Introduce the Line Drawing Algorithm and its practical applications.
6. Explain the Circle Derivation Algorithm and its implementation.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Understand the fundamental concepts of Computational Mathematics, including points, lines, and circles.
2. Apply knowledge of coordinate systems in computational mathematics.
3. Demonstrate the ability to perform 2D and 3D transformations.
4. Implement and apply the Line Drawing Algorithm in practical scenarios.
5. Derive and apply the Circle Derivation Algorithm in computational tasks.

5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical (2 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Introduce students to the present tense, past tense, and future tense in English grammar.
2. Teach additional grammar concepts to improve overall language proficiency.
3. Enhance students' reading skills with a focus on understanding texts related to computer concepts.
4. Improve students' writing skills, emphasizing clarity and structure in writing, particularly in relation to computer-related topics.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

1. Demonstrate a solid understanding and correct usage of present, past, and future tenses in writing and speaking.
2. Apply additional grammar concepts to enhance overall language proficiency.
3. Improve reading comprehension skills, especially in understanding texts related to computer concepts.
4. Develop and produce clear, structured written content with an emphasis on computer-related topics.

B- Course specific skill objectives ✓ B1 - Theoretical B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

The logo of the University of Mosul is a circular emblem. The outer ring contains the text 'جامعة الموصل' (University of Mosul) at the top and 'كلية علوم الحاسوب والرياضيات' (College of Computer Science and Mathematics) at the bottom. The inner circle features a stylized building and the year '1983'.

Curriculum description for the fourth year

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science and Mathematics / Computer Science Department
3.Course Name/Code	Operating system 2- CMCS23 F41011
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 theoretical + 2 practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

7. The main objective of this course is to introduce students to what a process is.
8. The various techniques of the functions of operating systems, for example, process synchronization and its problem.
9. Examples of solutions to that problem are (Peterson's) algorithm and the use of hardware to solve the problem (Semaphore).
10. This course focuses on reviewing the case of Deadlocks and how to prevent or avoid their occurrence in multi-process processors.
11. Memory management, secondary storage management and I/O management.
12. This course focuses more on the knowledge needed for designers and developers of operating systems. This will leave room for the expansion of accurate theoretical knowledge.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to learn:

7. Process
8. Synchronization problem
9. Dead lock handling & prevention
10. Characterization and conditions
11. Introduction to Memory

12. Memory Management 13. RAID Structure 14. Disk Structure Preemptive and non-preemptive scheduling.
B - Course specific skill objectives ✓ B1 - Theoretical ✓ B2 – Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- whiteboard ✓ 2- Smart board ✓ 3- Data Show projector
Evaluation methods
✓ 1- Midterm exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Projects
C- Emotional and valuable goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures ✓ 2- laboratories ✓ 3- Fact-findings and investigation ✓ 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions ✓ 5- Evaluating of individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure					
Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Introduction to process	Introduction	Whiteboard	-
Second	2	Synchronization problem The Critical-Section Problem	Synchronization problem	Data Show Projector	Homework
Third	2	Examples of Synchronization Solution (Peterson's)	Synchronization Solution By Algorithm	Data Show Projector and Whiteboard	Quiz
Fourth	2	Examples of Synchronization Solution (Semaphore)	Synchronization Solution By Hardware	Data Show Projector	Homework
Fifth	2	Monitors Deadlock Characterization	The Deadlock	Data Show Projector	-
Sixth	2	Methods for Handling Deadlocks Deadlock Prevention	Handling Deadlocks	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam
Eighth	2	Deadlock Avoidance Deadlock Detection and Recovery from Deadlock	The Deadlock Detection	Data Show Projector and Whiteboard	Homework
Ninth	2	Introduction to Memory	Memory Management	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Management Swapping and Contiguous Memory Allocation Paging and Structure of the Page	Swapping and Contiguous Memory	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Table Segmentation, Overview of Mass-Storage	Table Segmentation	Data Show Projector and Whiteboard	Homework
Twelfth	2	RAID Structure Stable-Storage Implementation,	RAID Structure	Data Show Projector and Whiteboard	Homework
Thirteenth	2	Disk Structure and Disk Attachment Disk Scheduling	Disk Structure	Review	Review
Fourteenth	2	Disk Management The Critical-Section problem	Disk Management	Data Show Projector and Whiteboard	Quiz

Fifteenth	2	Synchronization Examples	Synchronization Examples	Data Show Projector and Whiteboard	Project Discussion
------------------	---	--------------------------	--------------------------	------------------------------------	--------------------

11. Infrastructure

A- Required textbooks	Peterson, Operating System Concepts, Prentice Hall
B- Main References (Sources)	<ul style="list-style-type: none"> • Tanenbaum, Andrew S. Modern Operating Systems. Prentice Hall. • Hantelmann, Fred. Linux Start-up Guide. Springer.
C- Recommended books and references (scientific journals, reports, etc.)	<ul style="list-style-type: none"> • Kernighan, Brian W. e Ritchie, Dennis M. The C programming Language (ANSI C). Prentice-Hall. • Robbins, Kay A. Practical UNIX Programming. A Guide to Concurrency, Communication, and Multithreading. Prentice-Hall.

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Computer Networks- CMCS23 F41031
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	3 theoretical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

14. Introduce students to the concept of computer networks.
15. Provide them with the necessary information about the types of computer networks
16. How the networks are work.
17. The infrastructure and the designing of Networks.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to:

1. Understand the key concepts of computer networks, types, models and how networks are works.
2. Understand the transmission Media types: Guided media: UTP, STP, Coaxial Unguided media: wireless, IR, Satellite, and Bluetooth.
3. Understand the Networking Devices, Hub, Switch, and Router.
4. Recognize the seven layers of the OSI model with their tasks.
5. Recognize the layers of the TCP/IP with their tasks.
6. Understand Networks addressing, IP addresses, Mac address and port address.
7. Understand The IP addresses and its types: classless and classful.
8. Understand the Special Addresses, Private Addresses.

B - Course specific skill objectives ✓ B1 – Theoretical B2 - Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- whiteboard ✓ 2- Smart board ✓ 3- Data Projector
Evaluation methods
✓ 1- Midterm Exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 4- projects
C- Emotional and value goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures 2- laboratories ✓ 3- Fact-findings and investigation 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams ✓ 2- Research projects 3- Summer discussions ✓ 4- Evaluating assignments and discussions ✓ 5- Evaluation of individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

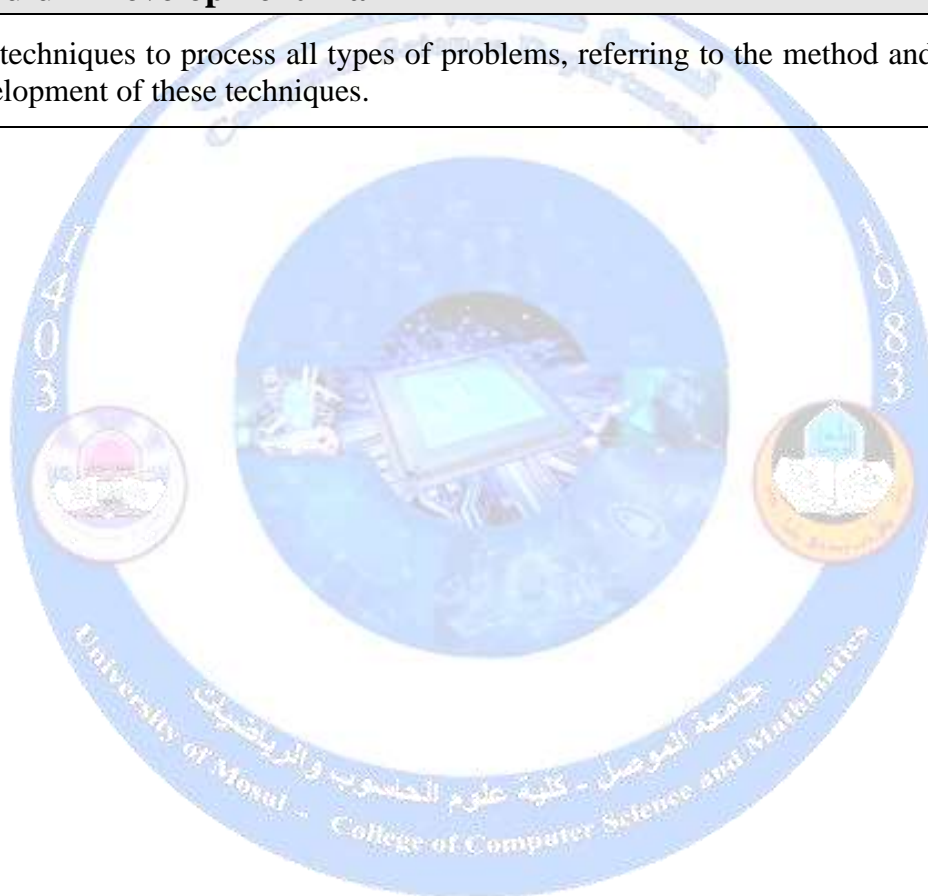

10. Curriculum structure					
Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Computer Networks Definition, types, Models	Introduction	Whiteboard	-
Second	2	Guided media: UTP, STP, Coaxial	Transmission Media-1-	Data Show Projector	Homework
Third	2	Unguided media: wireless, IR, Satellite, Bluetooth	Transmission Media-2-	Data Show Projector and Whiteboard	Quiz
Fourth	2	State the seven layers of the OSI model with their tasks.	OSI Model	Data Show Projector	Homework
Fifth	2	State the layers of the TCP/IP with their tasks	TCP/IP	Data Show Projector	-
Sixth	2	Hub, Switch, Router	Networking Devices	Data Show Projector and Whiteboard	Report
Seventh	2				Midterm Exam
Eighth	2	Types and classes (Classful)	IP addresses	Data Show Projector and Whiteboard	Homework
Ninth	2	Special addresses types and specifications and private addresses	Special Addresses, Private Addresses	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Importance of Subnetting and how it works	Subnetting-1-	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Subnetting Examples	Subnetting Examples	Data Show Projector and Whiteboard	Homework
Twelfth	2	Supernetting	Supernetting	Data Show Projector and Whiteboard	Homework
Thirteenth	2	Classless IP Addresses	Classless IP Addresses	Review	Review
Fourteenth	2	Classless Examples	Classless Examples	Data Show Projector and Whiteboard	Quiz
Fifteenth	2	Revision	Revision	Data Show Projector and Whiteboard	Project Discussion

11. Infrastructure

A- Required textbooks	TCP/IP Protocol Suite / Behrouze Forzan
B- Main References (Sources)	Data communication and Networking / Behrouze Forzan
C- Recommended books and references (scientific journals, reports, etc.)	

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul

4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 Theoretical + 2 Practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. Introducing the student to the fundamental concepts of computer security.
2. Familiarizing the student with security services, methods, and techniques.
3. Introducing the student to types of attacks, their methods, and protection strategies.
4. Introducing the student to basic encryption and decryption processes.
5. Teaching the student standard encryption architectures and their applications.
6. Educating the student on malware terminology, types, techniques, and related concepts.
7. Teaching the student the fundamentals of privacy.

9. Course outcomes, teaching, learning and assessment methods

A- The student will be able to:

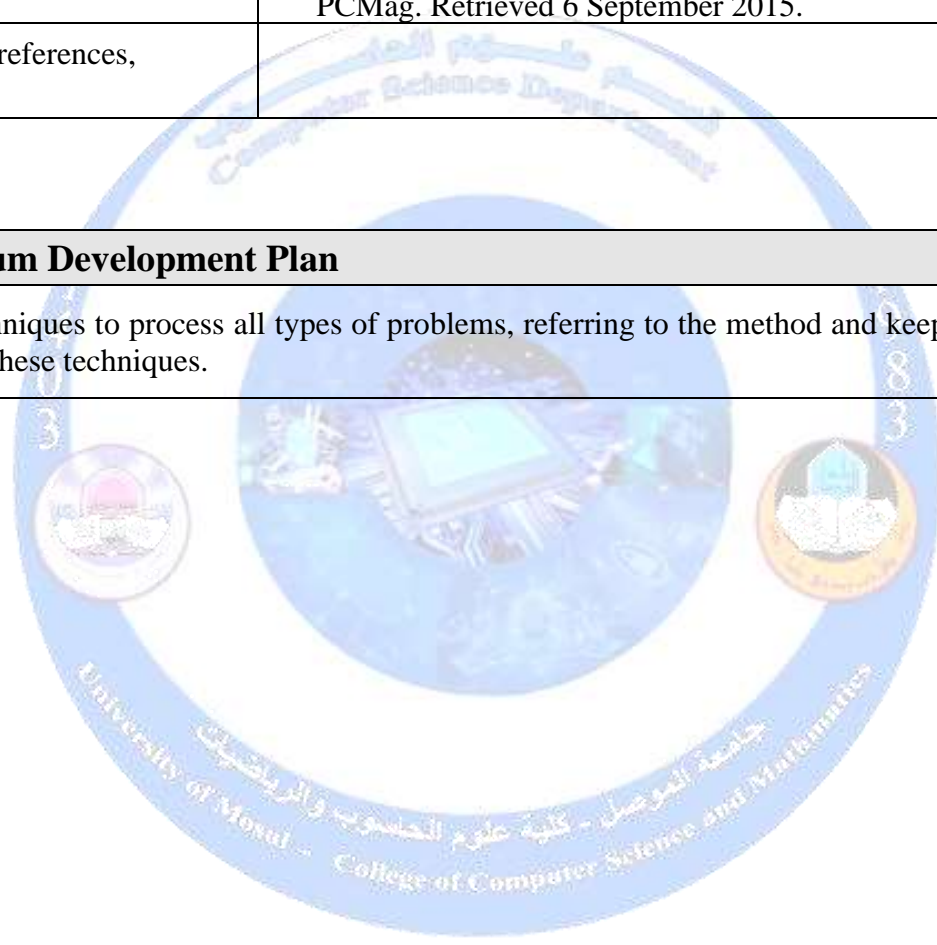

2. Understand and comprehend the fundamental concepts of computer security.
3. Identify different security services and their implementation methods.
4. Recognize types of cyber attacks, their techniques, and protection strategies.
5. Apply basic encryption and decryption techniques.
6. Understand and utilize standard encryption architectures in various applications.
7. Analyze types of malware, their mechanisms, and countermeasures.
8. Understand the principles of privacy and its importance in cybersecurity.

6.Number of study hours (total)	2 Theoretical (2 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to :

1. Understanding the basic concept of simulation.
2. Performing hand simulation for some examples.
3. Understanding the properties and methods of generating random numbers.
4. Generating random variables and their production methods.
5. Applying methods for generating observations from a random variable.
6. Input modeling in simulation.

9. Course outcomes, teaching, learning and assessment methods

A- The student will be able to:

2. Understand the fundamental concept of simulation.
3. Perform manual simulations for different examples.
4. Identify the properties and methods of generating random numbers.
5. Generate random variables using appropriate techniques.
6. Apply methods for generating observations from random variables.
7. Develop input modeling for simulation applications.

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Image Processing -CMCS24 F41041
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	∨ Theoretical + ∨ Practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. To provide a solid foundation in the basic concepts and principles of digital image processing. This includes understanding image formation, representation, color models, pixel visualization, and mathematical operations.
2. To implement the basic methods in digital image processing.
3. To teach students how to filter an image using different techniques. This includes spatial and frequency domain methods, histogram equalization, contrast stretching, and spatial filtering.
4. To teach students how to restore degraded images affected by noise, blurring, or other distortions.
5. To provide students with knowledge and skills to analyze and interpret images in terms of content and visible quality.
6. To provide hands-on experience in implementing image processing algorithms and conducting experiments by including practical sessions using MATLAB.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to

1. Recognize the necessary fundamentals for image processing.
2. Know the required mathematical operations.
3. Familiarize the students with the available color spaces.
4. Recognize the difference between scripts, functions, and p-codes.

5. Provide a hands-on solution for discrete Fourier transform questions. 6. Explain the filtration process in image processing. 7. Perform logical and neighborhood-based filtration processes. 8. Explain the convolution-based filters. 9. Describe the most famous image processing enhancement and restoration methods. 10. Describe the important image attributes. 11. Explain how to measure the quality of digital images using different methods. 12. Perform some important image morphological operations.
B - Course specific skill objectives ✓ B1 - Theoretical ✓ B2 - Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods

5.Course/Year	Courses system
6.Number of study hours (total)	٧ Theoretical (٧ units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to:

1. To be able to speak English fluently and accurately.
2. To think in English and then speak.
3. To be able to talk in English.
4. To be able to compose freely and independently in speech and writing.
5. To be able to read books with understanding.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to

1. To address grammar issues that students encounter in their daily speech, writing, reading and listening
2. To address the issue of grammatical errors that affect effective communication
3. To improve your reading skills through the practice of vocabulary enrichment, reading comprehension exercises, written responses, discussions, and reflections
4. Recognize the structure and organization of paragraphs,
5. Use strategies to think critically about reading and use appropriate technology to enhance reading comprehension, and vocabulary development.
6. Develop the writing skill.

7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to :

1. introduce students to the concept of computer networks
2. Teaching the students the communication concepts, connection techniques and the infrastructure of internet.
3. Provide the students with the necessary information about the types of computer networks and the protocols that used in each one
4. Involve students with the main concepts and configurations of interconnecting devices, such as route, switch, etc.
5. Teaching the students the techniques that used to diagnosing and troubleshooting of networks.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to:

1. Understanding computer networks, types, models.
2. Understanding how internet and computer networks are works.
3. Understanding the protocols that used in TCP/IP Model in general.
4. Understanding the protocols of the network layer
5. Understanding the protocols of the Data link layer.
6. Understanding the interconnecting devices

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Distributed System- CMCS24 F42041
4.Available attendance forms	Presence
5.Course/Year	Courses system
6.Number of study hours (total)	3 Theoretical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to :

1. Understanding Distributed Computing: The primary aim of a distributed systems course is to provide students with a comprehensive understanding of the fundamental concepts, principles, and techniques involved in distributed computing. This includes studying distributed algorithms, communication protocols, resource management, and synchronization mechanisms.
2. Designing Distributed Systems: The course aims to equip students with the knowledge and skills necessary to design and develop distributed systems.
3. Distributed Systems Models and Paradigms: The course aims to familiarize students with various models and paradigms used in distributed systems. This includes client-server architectures, peer-to-peer networks, distributed databases, cloud computing, and grid computing.

9. Course outcomes, teaching, learning and assessment methods	
A- Students will be able to:	
<ol style="list-style-type: none"> 1. Understanding of Distributed Systems Concepts: Students will gain a solid understanding of the fundamental concepts, principles, and models used in distributed systems. 2. Knowledge of Distributed Algorithms and Techniques: Students will learn about various algorithms and techniques used in distributed systems. 3. Awareness of the virtualization technologies and Code migration techniques. 4. Understanding of Networking and Communication: Students will gain knowledge of networking principles and communication protocols used in distributed systems. This includes understanding network topologies, message passing, remote procedure calls (RPC), and data serialization techniques. 5. Recognizing the concepts of Distributed File Systems and how to deal with the files on modern systems. 6. Understanding the importance of the Synchronization for the distributed systems and how different algorithms are designed and used. 	
B - Course specific skill objectives	
<ul style="list-style-type: none"> ✓ B1 - Theoretical B2 - Practical B3 - Summer training B4 - Graduation research 	
Teaching and learning methods	
<ul style="list-style-type: none"> ✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector 	
Evaluation methods	
<ul style="list-style-type: none"> ✓ 1- Midterm Exam ✓ 2- Quizzes ✓ 3- reports ✓ 4- Assignments 4- Projects 	
C- Emotional and value goals	
<ul style="list-style-type: none"> ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making 	

Teaching and learning methods
<ul style="list-style-type: none"> ✓ 1- Theoretical lectures 2- laboratories ✓ 3- Fact-findings and investigation 4- Discussion groups within practical lessons
Evaluation methods
<ul style="list-style-type: none"> ✓ 1- Written exams 2- Research projects 3- Summer discussions ✓ 4- Evaluation of assignments and discussions 5- Evaluation of individual and group research
D- General and transferable skills (other skills related to employability and personal development). <ul style="list-style-type: none"> 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure					
Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Definition, characteristics and goals of a distributed system.	Introduction	Whiteboard	-
Second	2	Types of distributed system , clusters and grid computing system, distributed information system.	Common types of Distributed Systems	Data Show Projector	Homework
Third	2	Architecture style, system architecture, centralized and decentralized architecture.	Architecture Style	Data Show Projector and Whiteboard	Quiz
Fourth	2	Processes, threads implementation, multithreaded server, clients, servers, distributed servers.	Threads and Multithreaded Clients and Servers	Data Show Projector	Homework

Fifth	2	Virtualization, architecture of virtual machines.	Virtualization	Data Show Projector	-
Sixth	2	Code migration.	Code Migration	Data Show Projector and Whiteboard	Report
Seventh	2	Communications, layered protocols, types of communications.	Layard Protocols		Midterm Exam
Eighth	2	Remote procedure calls, clients and server stubs, asynchronous RPC.	Remote Procedure Calls	Data Show Projector and Whiteboard	Homework
Ninth	2	Message oriented communications, message queuing model, channels.	Message oriented communications	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Stream oriented communications, quality of service, multicast communications.	Stream oriented communications	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Naming, names, identifiers, structured naming.	Naming	Data Show Projector and Whiteboard	Homework
Twelfth	2	The Implementation of a Name Space, The DNS Name Space.	DNS Name Space	Data Show Projector and Whiteboard	Homework
Thirteenth	2			Review	Review
Fourteenth	2	Synchronization, Global Positioning System.	Synchronization	Data Show Projector and	Quiz

				Whiteboard	
Fifteenth	2	Clock Synchronization Algorithms, Network Time Protocol.	Synchronization Algorithms	Data Show Projector and Whiteboard	Project Discussion

12. Curriculum Development Plan

Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

Curriculum Description Form

Curriculum Description

This curriculum description provides a concise summary of the key features of the curriculum and the expected learning outcomes that students should achieve, demonstrating whether they have maximized the available learning opportunities. It is Core to link it to the program description.

1.Educational institution	College of Computer Science and Mathematics/University of Mosul
2.Scientific Department / Center	Faculty of Computer Science Mathematics / Computer Science Department
3.Course Name/Code	Security Multimedia - CMCS24 F42021
4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	2 Theoretical + 2 Practical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to :

1. Enable students to understand that digital multimedia (audio, video, still photography, etc.) is exposed to a wide range of security issues.
2. Highlight the importance of protecting digital media from unauthorized distribution or modification from the media provider's perspective.
3. Emphasize the need for recipients to ensure that downloaded multimedia is virus-free and legitimately obtained.
4. Introduce encryption and digital branding tools as effective methods for securing multimedia content.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to:

1. Identify security threats associated with digital multimedia, including audio, video, and still photography.
2. Explain the importance of protecting digital media from unauthorized distribution or modification.
3. Assess methods for verifying the integrity of digital media to ensure it is virus-free and legitimately obtained.
4. Apply encryption techniques and digital branding tools to secure multimedia content.
5. Understand the role of firewalls in network security, firewall characteristics, and intrusion detection principles.
6. Describe categories of malware and the nature of distributed denial of service attacks.

7. Understand cloud computing concepts, services, deployment models, security issues, and Cloud Security as a Service.

B - Course specific skill objectives

- ✓ B1 - Theoretical
- ✓ B2 - Practical
- B3 - Summer training
- B4 - Graduation research

Teaching and learning methods

- ✓ 1- Whiteboard
- ✓ 2- Smart board
- ✓ 3- Data Show Projector

Evaluation methods

- ✓ 1- Midterm Exam
- ✓ 2- Quizzes
- ✓ 3- Reports
- ✓ 4- Assignments
- 4- Projects

C- Emotional and value goals

- ✓ 1- Deduction and analysis skills
- ✓ 2- Comparison skills
- ✓ 3- Discussion skills
- ✓ 4- Using the computer and the Internet
- ✓ 5- Research and investigation
- 6- Conducting research and drawing conclusions
- 7- Decision making

Teaching and learning methods

- ✓ 1- Theoretical lectures
- ✓ 2- Practical laboratories
- ✓ 3- Fact-findings and investigation
- ✓ 4- Discussion groups within practical lessons

Evaluation methods

- ✓ 1- Written exams
- 2- Research projects
- 3- Summer discussions
- ✓ 4- Evaluating assignments and discussions
- ✓ 5- Evaluating individual and group research

D- General and transferable skills (other skills related to employability and personal development).

1. Developing the ability to work effectively in a team.
2. Developing the ability for self-directed learning.
3. Developing the ability to generate and discuss ideas.
4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Introduction to Multimedia Security	Introduction	Whiteboard	-
Second	2	Digital WaterMarking methods	Digital WaterMarking	Data Show Projector	Homework
Third	2	Digital WaterMarking methods	Digital WaterMarking (cont.)	Data Show Projector and Whiteboard	Quiz
Fourth	2	Digital Rights Management in details	Digital Rights Management	Data Show Projector	Homework
Fifth	2	Digital Watermarking Technologies in details with examples	Digital Watermarking Technologies	Data Show Projector	-
Sixth	2	Digital Watermarking Technologies in details with examples	Digital Watermarking Technologies (cont.)	Data Show Projector and Whiteboard	Report
Seventh	2	Types of Digital Watermarks in details with examples	Types of Digital Watermarks		Midterm Exam
Eighth	2	Introduction, application with examples	Image Watermarking	Data Show Projector and Whiteboard	Homework
Ninth	2	Introduction, application with examples	Image Watermarking (cont.)	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Introduction, protocols, layers	Communication-based	Data Show Projector and Whiteboard	Quiz

Eleventh	2	Introduction, applications with examples	Models of Watermarking- Geometric models	Data Show Projector and Whiteboard	Homework
Twelfth	2	Audio Watermarking in details with examples and applications	Audio Watermarking	Data Show Projector and Whiteboard	Homework
Thirteenth	2	Review	Review	Data Show Projector and Whiteboard	Homework
Fourteenth	2	Video Watermarking in details with examples and applications	Video Watermarking	Data Show Projector and Whiteboard	Quiz
Fifteenth	2	Revision	Revision	Data Show Projector and Whiteboard	Project Discussion

4.Available attendance forms	Presence
5.Course/Year	Course system
6.Number of study hours (total)	3 Theoretical (3 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to :

1. Understand the fundamentals of e-commerce.
2. Learn the e-commerce technologies.
3. Understand the applications of e-commerce in various domains.
4. Recognize the role of information technology in e-commerce.
5. Understand security and privacy issues in e-commerce.
6. Learn the e-marketing strategies.
7. Understand electronic payment systems.

9. Course outcomes, teaching, learning and assessment methods

A- Students will be able to:

1. Understanding the fundamentals of e-commerce.
2. Identify and apply various e-commerce technologies.
3. Analyze the applications of e-commerce across different domains.
4. Recognize the importance of information technology in enabling e-commerce.
5. Understand and address security and privacy concerns in e-commerce.
6. Develop and implement effective e-marketing strategies.
7. Understand and evaluate electronic payment systems in e-commerce transactions.

B - Course specific skill objectives ✓ B1 - Theoretical B2 - Practical B3 - Summer training B4 - Graduation research
Teaching and learning methods
✓ 1- Whiteboard ✓ 2- Smart board ✓ 3- Data Show Projector
Evaluation methods
✓ 1- Midterm Exam ✓ 2- Quizzes ✓ 3- Reports ✓ 4- Assignments 5- Research projects
C- Emotional and value goals ✓ 1- Deduction and analysis skills ✓ 2- Comparison skills ✓ 3- Discussion skills ✓ 4- Using the computer and the Internet ✓ 5- Fact-findings and investigation 6- Conducting research and drawing conclusions 7- Decision making
Teaching and learning methods
✓ 1- Theoretical lectures 2- Laboratories ✓ 3- Fact-findings and investigation 4- Discussion groups within practical lessons
Evaluation methods
✓ 1- Written exams ✓ 2- Research projects 3- Summer discussions ✓ 4- Evaluating assignments and discussions 5- Evaluating individual and group research
D- General and transferable skills (other skills related to employability and personal development). 1. Developing the ability to work effectively in a team. 2. Developing the ability for self-directed learning. 3. Developing the ability to generate and discuss ideas. 4. Developing the ability to solve problems in a logical and structured manner.

10. Curriculum structure

Weeks	Hours	Required learning outcomes	Unit name/topic	Teaching method	Assessment Method
First	2	Definition of E-commerce; Electronic commerce and physical commerce; The Development and Growth of Electronic Commerce	Introduction	Whiteboard	-
Second	2	E-commerce Scenarios; Advantages and Disadvantages Of E-commerce; Threats of E-commerce, Components of E-CommerceE-Commerce: Goods and Services.	E-Commerce Categories and features	Data Show Projector	Homework
Third	2	Types of e-commerce: B2C, B2B, C2B, C2C, B2G, G2B , G2C.	E-Business & E-Commerce and E-govenment	Data Show Projector and Whiteboard	Quiz
Fourth	2	Benefits to Organizations; Benefits to Consumers; Benefits to Society; The Limitations of e-commerce	Mobile E-commerce and The Benefits of e-commerce	Data Show Projector	Homework
Fifth	2	Internet; Intranet; Extranet: definition and advantages; Wireless Application Protocol	Types of Networking For E-Commerce	Data Show Projector	-
Sixth	2	Types of Electronic Payment Systems: Types, definition and advantages	E-Payment Systems	Data Show Projector and Whiteboard	Report
Seventh	2		Mid semester exam		Midterm Exam
Eighth	2	Definition; advantages and disadvantages	Electronic Checks and Electronic Purses	Data Show Projector and Whiteboard	Homework
Ninth	2	Security Requirements For E-Commerce; Risks in Electronic Payment systems	Security Requirements In Electronic Payment Systems	Data Show Projector and Whiteboard	Prepare a report
Tenth	2	Definition; advantages and disadvantages Types of E-Marketing	E-Marketing	Data Show Projector and Whiteboard	Quiz
Eleventh	2	Definition; advantages and disadvantages Types of Advertising	Advertising	Data Show Projector and Whiteboard	Homework

Twelfth	2	Definition; Types of E-Auction; Benefits of E-Auctions; Limitations of E-Auction	Online Auction	Data Show Projector and Whiteboard	Homework
Thirteenth	2			Review	Review
Fourteenth	2	EDI & Electronic Commerce; EDI layered architecture; Applications of EDI; definition and Types of Firewall; Secure Socket Layer SSL Technique	Electronic Data Interchange and Firewall	Data Show Projector and Whiteboard	Quiz
Fifteenth	2	Revision	Revision	Data Show Projector and Whiteboard	Project Discussion

5.Course/Year	Course system
6.Number of study hours (total)	2 Theoretical + 1 Tutorial (2 units)
7.Date this description was prepared	1/9/2023

8.Course objectives

The course aims to :

1. Understand the basic concepts of information theory.
2. Gain a brief understanding of the history of information theory.
3. Explore the applications of information theory in various fields.
4. Learn the fundamentals of probability, such as marginal probability, joint probability, and conditional probability.
5. Understand the concepts of information and entropy.
6. Learn about data compression and data coding techniques.
7. Understand the types of channels and the properties of symmetric channels, with examples for each type.

9. Course outcomes, teaching, learning and assessment methods

A-Students will be able to:

1. Understanding the basic concepts of information theory.
2. Recognize the historical development and significance of information theory.
3. Apply the concepts of information theory to various real-world applications.
4. Calculate and apply marginal, joint, and conditional probabilities.
5. Understand and calculate information and entropy in different contexts.
6. Apply data compression and coding techniques.
7. Identify and analyze different types of channels and understand the properties of symmetric channels with practical examples.

12. Curriculum Development Plan
Adding new techniques to process all types of problems, referring to the method and keeping pace with the development of these techniques.

First Stage – First Term (المرحلة الاولى – الكورس الاول)	
1.1 Programming Fundamentals (اساسيات البرمجة)	اسم المادة
CMCS23 F11011	رمز المادة
اجباري قسم	نوع المادة
٣	عدد الوحدات
٢ نظري + ٢ عملي	عدد الساعات
تعتبر مادة البرمجة المهيكلية من اهم المواد الدراسية لقسم علوم الحاسبات لاسيما وانها تضع الاساس للطالب في مجال التفكير البرمجي وكيفية التعامل مع لغات البرمجة الاخرى	اهداف المقرر
Programming Fundamentals Syllabus: Introduction to programming – describing how to display text, add integers. Defining memory concepts, Arithmetic, Equality and relational Operators. Introduction to classes and objects – Defining and declaring a class with a method, declaring a method with a parameter. Introducing instance variables, set methods, get methods, primitive and reference types. Initializing Objects with constructors. Defining floating-point numbers and type double. Control Statements Part I - Conditional statements, repetition using while statement, types of repetitions, nested repetition, compound assignment statement, increment and decrement operators.	المنهج المقرر

First Stage – First Term (المرحلة الاولى – الكورس الاول)	
1.2 Computer Organization (مبادئ تركيب الحاسوب)	اسم المادة
CMCS23 F11021	رمز المادة
اجباري قسم	نوع المادة
٣	عدد الوحدات
٢ نظري + ٢ عملي	عدد الساعات
يعتبر هذا المقرر من المقررات الاساسية في علم الحاسبات والذي من خلاله يكتسب الطالب المعرفة الاساسية عن الاجزاء الداخلية للحاسوب وكيف عمل كل جزء. بالاضافة الى ذلك يتعرف الطالب على التقنيات المستخدمة في صناعة هذه الاجزاء وكيفية قياس كفاءة كل جزء. و يعتبر هذا المقرر هو الاساس لدراسة مقررات اخرى مثل معمارية الحاسوب و نظم التشغيل.	اهداف المقرر
Computer Organization Syllabus: Processor and its architecture, memory hierarchy, I/O and storage topics, instruction set architecture, addressing mode, interrupts, architecture of the Intel 80*86 based microprocessors, micro assembler programming techniques involving building, incorporating and maintaining libraries using assembler speedups and directives.	المنهج المقرر

The background features a large, light blue circular watermark of the University of Mosul logo. The logo contains the text 'جامعة الموصل' (University of Mosul) at the top, 'Computer Science Department' in the middle, and '1983' on the right side. The central part of the logo depicts a stylized building and a globe.

<p>Module Aims, Learning Outcomes and Indicative Contents</p> <p>أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية</p>	
<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<p>Develop Problem-Solving Skills: Enable students to analyze problems, break them down into smaller components, and design appropriate solutions using a systematic approach.</p> <p>Understand Input-process-output model: understand the input-process-output model.</p> <p>Master C# Programming Fundamentals: Familiarize students with the syntax, data types, control structures, and functions of the C# programming language.</p> <p>Design Algorithms and Flowchart: Teach students how to translate problem-solving strategies into Flowchart and implement it in C#.</p> <p>Software Development Method: Understand the software development method.</p> <p>Enhance Debugging and Troubleshooting Skills: Help students develop effective debugging techniques to identify and resolve errors in their programs.</p> <p>Promote Effective Programming Practices: Encourage good programming habits, such as code documentation, proper naming conventions, and writing readable and maintainable code.</p> <p>Get Exposure to Basic Object-Oriented Programming (OOP) Basics: Introduce students to the principles of OOP, For example: classes, objects, and inheritance.</p> <p>Master Console Application Coding: Develop code writing skills.</p> <p>Prepare for Advanced Programming Courses: Lay the foundation for further studies in computer science and programming by providing a solid understanding of problem-solving techniques and programming fundamentals in C#.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>Recognize how read and design algorithms and flowchart.</p> <p>Analyze and break down problems.</p>

	<p>Practice professional C# programming.</p> <p>Debug and troubleshoot C# code.</p> <p>Demonstrate efficient programming skills.</p> <p>Understand basic OOP concepts.</p> <p>Read and write professional C# console applications.</p>
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>Indicative content includes the following.</p> <p>Problem Solving</p> <p>Problem solving strategies [10 hrs]</p> <p>The role of algorithms in the problem-solving process [20 hrs]</p> <p>Implementation strategies for algorithms [20 hrs]</p> <p>Constructs of C# [20 hrs]</p> <p>Basic syntax and semantics of higher-level language</p> <p>Variables, types, expressions, and assignment</p> <p>Simple I/O</p> <p>Conditional</p> <p>Iterative control structure</p> <p>Data Structures [14 hrs]</p> <p>Representation of numeric data</p> <p>Range, precision, and rounding errors</p>

<p>Learning and Teaching Strategies</p> <p>استراتيجيات التعلم والتعليم</p>	
<p>Strategies</p>	<p>Lectures: Use lectures that cover theoretical concepts and provide an overview of key topics.</p> <p>Hands-on Labs: Provide practical lab sessions where students can apply their knowledge and skills acquired in lectures.</p> <p>Use of Technology: Incorporate interactive tools and online platforms for practice and reinforcement.</p> <p>Peer Learning and Collaboration: Encourage students to work together and learn from each other.</p> <p>Scaffolded Learning: Break down complex concepts into manageable parts.</p>

	<p>Assessment Strategies: Employ a mix of formative and summative assessments.</p> <p>Real-World Examples: Connect theory with practical applications.</p> <p>Continuous Learning: Stay updated on computer science advancements and adapt teaching methods.</p> <p>Reflection and Feedback: Encourage self-reflection and provide constructive feedback.</p>

Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطلاب خلال الفصل	61	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للطلاب أسبوعياً	4
Total SWL (h/sem) الحمل الدراسي الكلي للطلاب خلال الفصل	150		

Module Evaluation تقييم المادة الدراسية					
As		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	2	10% (10)	5, 10	LO #1, 2, 10 and 11
	Assignments	2	10% (10)	2, 12	LO # 3, 4, 6 and 7
	Projects / Lab.				
	Report	1	10% (10)	13	LO # 5, 8 and 10
Summative assessment	Midterm Exam	2 hrs	10% (10)	7	LO # 1-7
	Final Exam	3 hrs	40% (40)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus) المنهاج الأسبوعي النظري	
Week	Material Covered
Week 1	Introduction to Problem Solving and Programming. Cover course overview and expectations
Week 2	Input-process-output model
Week 3	Algorithm and flowchart design
Week 4	Advanced flowchart and examples

Week 5	Software Development Methods
Week 6	Introduction to C#
Week 7	Mid-term Exam
Week 8	C# Variables
Week 9	Operators in C#
Week 10	If statement in C#
Week 11	Switch statement in C#
Week 12	For loop and nested for loop
Week 13	While and do while loop
Week 14	Operators Precedence
Week 15	Type Conversion
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus)	
المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	Lab 1: Visual Studio installation
Week 2	Lab 2: Basic printing operations
Week 3	Lab 3: Transfer flowchart to program
Week 4	Lab 4: Writing basic program
Week 5	Lab 5: Program debugging
Week 6	Lab 6: Additional examples
Week 7	Lab 7: Mid-term Exam
Week 8	Lab 8: Programming variables in C#
Week 9	Lab 9: Programming operators in C#

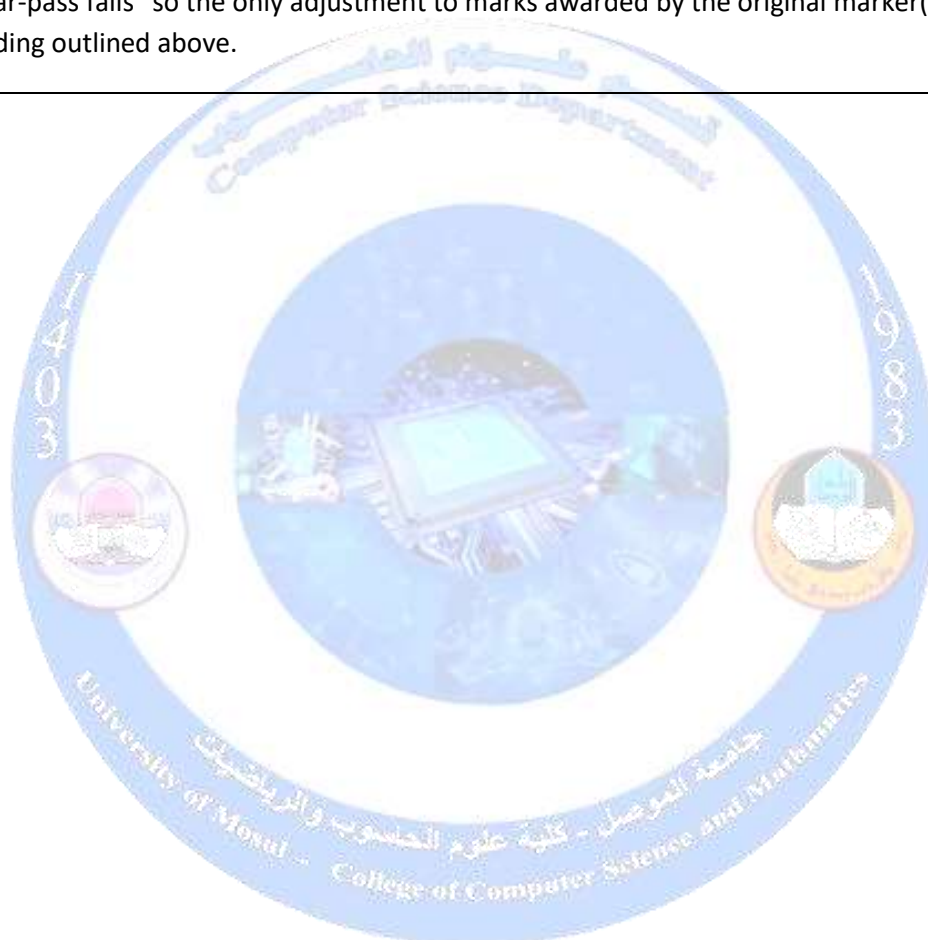

Week 10	Lab 10: Programming If statement in C#
Week 11	Lab 11: Programming switch statement in C#
Week 12	Lab 12: Programming for loop in C#
Week 13	Lab 13: Programming while loop in C#
Week 14	Lab 14: Writing codes about operator precedence
Week 15	Lab15: Additional examples and review
Week 16	Preparatory week before the final Exam

Grading Scheme				
مخطط الدرجات				
Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings

	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group	FX – Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
(0 – 49)	F – Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	<p>To learn the basic techniques and methodologies for designing and analyzing digital systems and how to apply these techniques to build specific circuits.</p> <p>Define the problem (Inputs and Outputs), write its functions</p> <p>Implement functions using Combinational digital circuit.</p> <p>Minimize functions using any type of minimizing algorithms (Boolean algebra, Karnaugh-Map or Tabulation Method).</p> <p>Have knowledge in analyzing and designing procedures of Combinational digital circuits.</p>
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<p>Learning about the different number systems.</p> <p>Learning the arithmetic operations related to different number systems.</p> <p>Learning the different logic gates of computer system and their work.</p> <p>Ability to design, simplify and implement different logical and arithmetic circuits that considered the basic of digital system.</p> <p>Ability to design, simplify and implement different sequential circuits, counters and shift registers.</p>
Indicative Contents المحتويات الإرشادية	<p>Indicative content includes the following:</p> <p>Part 1:</p> <p>Different Number Systems, Data representation (integer and fraction) using different number systems. Conversion Between Different Numbers Systems. Arithmetic operations using different number systems, and Digital Codes (BCD, Parity, Gray, Excess-3 etc.) [15 hrs]</p> <p>Part 2</p> <p>Logic Gates: The Inverter (NOT Gate), AND Gate, OR Gate, NAND Gate, NOR Gate, the Exclusive-OR Gate and Exclusive-NOR Gates, simplification and Boolean Functions, Karnaugh Map. [20 hrs]</p>

	Part 3: Digital Circuit Design, Combinational Circuits, Binary Full and Half Adder, Binary Subtractor. [20 hrs]
	Part 4 Multiplexer and Demultiplexer, Decoder and Encoder, Sequential Circuits, Flip-Flops . [15 hrs]

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<p>The main objectives of the course are as follows:</p> <p>Understanding Systems: The course aims to introduce students to the concept of systems and their role in organizations. Students learn to identify various types of systems, including manual and computer-based systems, and understand their components, relationships, and interactions.</p> <p>System Development Life Cycle: Students are familiarized with the System Development Life Cycle (SDLC), which is a systematic approach to developing information systems.</p> <p>Requirements Gathering and Analysis: Students learn techniques and methods for gathering and analyzing system requirements.</p> <p>System Design: The course focuses on system design principles and methodologies. Students learn to translate user requirements into a conceptual design, create system models and diagrams (e.g., data flow diagrams, entity-relationship diagrams), design user interfaces, and select appropriate hardware and software components.</p> <p>System Implementation: Students gain knowledge about system implementation strategies, including system testing, deployment, and conversion.</p> <p>System Maintenance and Evaluation: The course covers the ongoing maintenance and evaluation of information systems. Students learn about system maintenance activities, such as bug fixing, updates, and enhancements.</p> <p>Project Management: The course may also include project management concepts and techniques, as system analysis and design often involve managing resources, schedules, and budgets.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>a student will be able to: 1. Enhanced problem-solving skills: provide a structured approach to problem-solving, emphasizing critical thinking and analytical skills.</p> <p>2. Proficiency in system development life cycle (SDLC): System analysis and design courses typically cover the SDLC, which is a standardized process for developing and maintaining information systems.</p> <p>3. Ability to gather and document requirements: One crucial aspect of system analysis is gathering requirements from stakeholders.</p>

	<p>4.Designing efficient and scalable systems: System design involves creating blueprints for software and hardware components, databases, user interfaces, and system architecture.</p> <p>5.Improved communication and collaboration: emphasize the importance of effective communication with stakeholders, including users, developers, and project managers.</p> <p>6.Increased employability: Organizations across various industries require professionals who can analyze, design, and implement effective information systems.</p> <p>7.Knowledge of emerging technologies: cover emerging technologies and trends in the field.</p> <p>8.Improved project management skills: touch upon project management methodologies and techniques.</p>
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>System Analysis (Introduction)</p> <p>Data vs. Information, Defining A System, System Type System Development Life Cycle, Planning Phase, Analysis Phase, Design Phase, Implementation Phase. [6 hrs.]</p> <p>Systems Development Methodologies</p> <p>Methodology Types, Categories of the System Development Methodologies. [6 hrs]</p> <p>System Planning Phase</p> <p>Project Initiation, System Request, Feasibility Analysis</p> <p>Project Management</p> <p>Project Management, Creating the Work Plan, Staffing The Project. [6 hrs]</p> <p>Information Gathering, Interviews, Joint Application design (JAD), Questionnaire, Document Analysis, Observation. [6 hrs]</p> <p>Process Modeling and Data Flow Diagramming</p> <p>Data flow diagramming (DFD), Using a DFD to Define Business Processes, DFD Levels, Use Case. [6 hrs]</p> <p>Data Modeling</p> <p>Logical data models (LDMs), Physical data models (PDMs), Normalization. [6 hrs.]</p> <p>Design Phase</p>

	<p>Design phase steps, Design Strategies, selecting a Design Strategy, Moving from Logical to Physical Model. [6 hrs.]</p> <p>Architecture Design</p> <p>The Purpose of Architecture Design, Functions (Software) of Architectural Components, Operational Requirements, Performance Requirements Security Requirements, Network Model. [6 hrs.]</p> <p>User Interface Design and Navigation Design</p> <p>User Interface Design Fundamental Parts, Principles for User Interface Design, User Interface Design Process, Basic Principles of Navigation Design. [6 hrs]</p> <p>Data Storage Design</p> <p>Data Storage Formats, Database Types, Optimizing Data Storage. [6 hrs]</p> <p>Program Design</p> <p>Top-Down Modular Approach, Structure Chart, Structure Chart Elements, Building the Structure Chart, Program Specification. [6 hrs]</p> <p>Implementation Phase</p> <p>Construction, Installation, Post – Implementation Evaluation, System Maintenance. [3 hrs]</p>
--	---

Learning and Teaching Strategies	
استراتيجيات التعلم والتعليم	
Strategies	<p>Assign individual or group projects that involve analyzing and designing systems from start to finish.</p> <p>Break down larger projects into smaller milestones to provide a sense of accomplishment and gradual progress.</p> <p>Provide regular feedback and guidance throughout the project to ensure students stay on track and learn from their experiences.</p>

	<p>Practical Examples and Case Studies: Utilize real-life case studies to illustrate the application of system analysis and design principles in various industries and contexts.</p> <p>Discuss success stories and challenges faced by organizations during system implementation, highlighting the importance of effective analysis and design.</p> <p>Encourage students to analyze and critique existing systems, identifying their strengths, weaknesses, and potential improvements.</p> <p>Collaborative Learning: Foster a collaborative learning environment where students can work together, exchange ideas, and learn from each other's experiences.</p> <p>Incorporate group discussions, peer reviews, and presentations to encourage active participation and knowledge sharing.</p> <p>Assign group projects that require students to work in teams, promoting teamwork and effective communication skills.</p> <p>Continuous Assessment: Conduct regular assessments, quizzes, or exams to evaluate students' understanding of the concepts and principles of system analysis and design.</p> <p>Provide constructive feedback to help students identify their strengths and areas for improvement. Offer opportunities for students to reflect on their learning progress and set personal goals.</p> <p>Stay Updated:</p>

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
<p>Module Aims</p> <p>أهداف المادة الدراسية</p>	<p>To develop problem solving skills of the fundamentals of discrete mathematics through understanding the concepts of propositional logic.</p> <p>To understand the logical equivalence between tow compound propositions.</p> <p>This course deals with the basic concepts of the concept predicate and quantifiers.</p> <p>To understand the concepts of isomorphism and planar their applications in the real life</p> <p>To understand the concepts of permutations and combinations and how to actually use it..</p> <p>To understand how to convert any object in the real world into its vertices and edges then we can process it.</p> <p>To understand what the structure of any programming language are through understanding its symbols and strings and all the applied operations.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>Recognize and understanding the outline of proposition and not proposition terms and their equations and truth table construction.</p> <p>Describe the equations of that satisfies the equivalence logically.</p> <p>Summarize what is meant by converting not propositional logic to proposition through predicate and quantifier.</p> <p>Understanding the graphical representation and contents of the lists .</p> <p>Understanding the tuples representation compared with the lists.</p> <p>Identify how to produce a new string for any language.</p> <p>Identify the algebraic structures with all types.</p> <p>The ability to determine the isomorphism case between two objects.</p> <p>Understanding how to convert any graph to a plane graph.</p> <p>Identify the applications of the combination in the real life.</p>

	. Understanding the permutation term and its applications.
Indicative Contents المحتويات الإرشادية	<p>Indicative content includes the following.</p> <p>Propositional logic definition, Compound proposition elements, Compound proposition classification Building a truth table, Logical operators' definition and equivalences in propositional logic, . [10 hrs]</p> <p>Predicate and quantifier concepts, truth values, Universal quantification, Existential quantification, negation operation, object structure, vertices and edges, Functions, injection function, surjection function, bijection, function properties, Domain and co-domain definition, image, and pre-image comparison. [15 hrs]</p> <p>tree definition, m-ary tree , rooted tree, in-order traversal, post order traversal and pre-order traversal. [15 hrs]</p> <p>Definition of lists, graphical representation of list, initializing a list, accessing the values of the list, Tuples construction, applied operations on tuples, [15 hrs]</p> <p>Mechanisms of Strings and Languages construction, isomorphism between two objects, plane graph construction, object segmenting to regions, algebraic structures and permutation and combination analysis [10 hrs]</p>

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	<p>Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.</p>

Delivery Plan (Weekly Syllabus)	
المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	Introduction to propositional logic, compound proposition and its classification
Week 2	Logical equivalence concepts
Week 3	Definition of Predicate and Quantifier and their types
Week 4	Definition and types of Functions

Week 5	Introduction to Trees, tree traversal, rooted m-ary tree, vertices, edges, and the outline terminologies
Week 6	Definition of the lists, the graphical representation, operations and programming examples about it
Week 7	Mid-term Exam
Week 8	Tuples operations, graphical representation, and programming languages examples
Week 9	Strings construction, alphabet symbols, concatenation, and reverse and concatenation operations
Week 10	Language definition, language construction and applied language operations
Week 11	Isomorphism properties, graphs layout, object degree, vertices, edges, and applications
Week 12	Planar, plane graph construction, its properties, plane graph to regions segmentation
Week 13	Algebraic structures, Binary operations on a set, properties and types
Week 14	Permutation definition, n-objects permutation, circle permutation and applications
Week 15	Combination definition, no. of items selection and applications
Week 16	Preparatory week before the final Exam

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	<p>التعرف على فضاء المتجهات والمفاهيم المتعلقة بها</p> <p>التعرف على الفضاء الجزئي والخواص الجبرية له</p> <p>معرفة التحويلات الخطية وتطبيقاتها</p>
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<p>فهم وتطبيق مجموعة متنوعة من الأساليب الرياضية: يتعلم الطلاب مجموعة متنوعة من الطرق والأساليب الرياضية المختلفة التي يمكن استخدامها لحل المسائل الرياضية المعقدة.</p> <p>تطوير مهارات التفكير النقدي: يتم تعزيز مهارات التحليل والتركيب والتفكير النقدي عندما يتعلم الطلاب طرقاً رياضية متنوعة. يتم تشجيع الطلاب على التفكير بشكل منهجي والتحليل العميق للمسائل الرياضية.</p> <p>القدرة على حل المسائل الرياضية المعقدة: يتعلم الطلاب كيفية تحليل وفهم المسائل الرياضية المعقدة وتطبيق الأساليب والتقنيات الرياضية المناسبة لحلها بشكل صحيح.</p> <p>التفكير الإبداعي والابتكار: يشجع تعلم طرق رياضية متنوعة الطلاب على التفكير الإبداعي والابتكار في مجال حل المسائل الرياضية. يتعلم الطلاب كيفية تطوير حلول جديدة وفريدة باستخدام الأساليب الرياضية.</p>
Indicative Contents المحتويات الإرشادية	<p>يتضمن المحتوى الإرشادي مايلي :</p> <p>فضاء المتجهات والفضاء الجزئي (١٥ ساعة)</p> <p>التركيب الخطي (١٥ ساعة)</p> <p>القاعدة والبعد (١٥ ساعة)</p> <p>فضاء الجداء الداخلي (١٥ ساعة)</p> <p>١٠ ساعة) التحويلات الخطية (</p>

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم	
Strategies	الإستراتيجية الرئيسية التي سيتم تبنيها في تقديم هذه الوحدة هي تشجيع مشاركة الطلاب في التمارين ، وفي الوقت نفسه تقوم بتحسين وتوسيع مهارات التفكير الناقد. سيتم تحقيق ذلك من خلال الفصول الدراسية ، والدروس التفاعلية ، ومن خلال النظر في نوع من التجارب البسيطة التي تنطوي على بعض أنشطة أخذ العينات المثيرة للاهتمام للطلاب.

Student Workload (SWL)			
الحمل الدراسي للطلاب

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Objectives أهداف المادة الدراسية	<p>To be able to speak English fluently and accurately.</p> <p>To think in English and then speak.</p> <p>To be able to talk in English.</p> <p>To be able to compose freely and independently in speech and writing.</p> <p>To be able to read books with understanding.</p>
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<p>To address grammar issues that students encounter in their daily speech, writing, reading, and listening.</p> <p>To address the issue of grammatical errors that affect effective communication.</p> <p>To improve your reading skills through the practice of vocabulary enrichment, reading comprehension exercises, speed reading strategies, written responses, discussions, and reflections</p> <p>Recognize the structure and organization of paragraphs,</p> <p>Use strategies to think critically about reading and use appropriate technology to enhance reading comprehension, reading speed, and vocabulary development.</p> <p>Develop the writing skill.</p>
Indicative Contents المحتويات الإرشادية	<p>Indicative content includes the following.</p> <p>Introduction: about new headway pre-intermediate plus [5 hrs]</p> <p>Tenses: past-present-future, wh- questions. Vocabulary- using a bilingual dictionary, reading (communication). Everyday English (social expressions) [5 hrs]</p> <p>Grammar: Review about tenses, Present tenses, have and have got. Vocabulary: about (daily life), listening and match between verb and nouns. Practices about simple present and present continuous, Reading: about living in the USA. Social expressions about every day English. [10 hrs]</p>

	<p>Past tenses, simple past and past continuous, practice, Reading and listening, regular and irregular verbs. Vocabulary: about N.- V.- Adj. endings. Everyday English (time expressions). [10hrs]</p> <p>Grammar: the quantities, also about Something/someone/somewhere, practices. Reading: about markets, practices. [12 hrs]</p>

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	<ol style="list-style-type: none"> 1. Improve Problem-Solving Skills: Enable students to analyze problems, break them down into smaller components, and design appropriate solutions using a systematic approach. 2. Master Advanced C# Programming: Teach students the advanced data types, control structures, and functions of the C# programming language. 3. Code Modularity Concepts: Teach students how to write modular code using different concepts like functions, libraries, and object-oriented programming principles. 4. Promote Effective Programming Practices: Instill good programming habits, such as code documentation, proper naming conventions, and writing readable and maintainable code. 5. Apply Programming Skills to Real-World Problems: Provide opportunities for students to apply their programming knowledge to solve practical problems and develop software applications. 6. Operating System Programming: Teach student how to connect their program to operating system and how to work with files and directories. 7. Cultivate Collaboration and Teamwork: Encourage students to work collaboratively on programming projects, fostering effective communication, problem-solving, and collaboration skills. 8. Report Writing and Presentation: Prepare the student on how to write the reports and present their work for the class. 9. Decision Making: Communicate design decisions for the selection, storage and manipulation of data 10. Prepare for Future Courses: Prepare students for upcoming courses in the collage, with related to programming.

<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<ol style="list-style-type: none"> 1. Demonstrate problem solving skills. 2. Practice professional C# programming. 3. Summarize code modularity and reuse. 4. Communicate and Document Code 5. Work collaboratively in teams. 6. Apply programming skills to Real-World scenarios 7. Prepare for future programming concepts.

Learning and Teaching Strategies	
استراتيجيات التعلم والتعليم	
Strategies	<p>The main strategy that will be adopted in delivering this module is to encourage students' participation in the discussions, while at the same time refining and expanding their critical thinking skills. This will be achieved through:</p> <p>1- Lectures - aim to deliver concepts and fundamental knowledge relation.</p> <p>2- Tutorial sessions - are deployed to illustrate the application of fundamental knowledge of assembly language programming to different practical problems.</p> <p>3- Assignments - are arranged to provide the opportunity for students to search for information, analyze problems and model their programs, with knowledge obtained, and present the completed tasks.</p> <p>4- Computer sessions - to develop actual computer codes to solve simple experiments, and thus the use of assembly language to implement different instructions is an important part of the subject.</p>

Week 14	Logic Instructions
Week 15	8088/8086 CPU Architecture, Inside the 8086 Microprocessor, Fetch and Execute, Reading/Writing Data
Week 16	The preparatory week before the Final Exam

Delivery Plan (Weekly Lab. Syllabus) المنهاج الاسبوعي للمختبر	
Week	Material Covered
Week 1	Lab 1: The PC & its DEBUG Program
Week 2	Lab 2: Examining & Modify the Contents of Memory (Dump command, Data Entry Commands)
Week 3	Lab 3: Move & compare commands
Week 4	Lab 4: debugging program (assemble command and unassembled command, trace command)
Week 5	Lab 5: General purpose registers, Pointer register & instruction pointer
Week 6	Lab 6: Registers commands & flag register
Week 7	Lab 7: Mid-term Exam
Week 8	Lab 8: Write & execute the program in the debugger by applying MOV inst.
Week 9	Lab 9: Write & execute The Program in the debugger applying MOV inst.
Week 10	Lab 10: Use data transfer instructions in programming
Week 11	Lab 11: Use data transfer instructions in programming
Week 12	Lab 12: Use Arithmetic instruction programming
Week 13	Lab 13: Use Arithmetic instruction programming
Week 14	Lab 14: Use logic instruction programming
Week 15	Lab 15: The preparatory week before the Final Exam

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	<p>HTML (Hypertext Markup Language): HTML is the foundation of web development. Learn the basic structure of HTML, including tags, elements, attributes, and how to create the structure and content of web pages.</p> <p>CSS (Cascading Style Sheets): CSS is used to style and format HTML elements. Learn how to apply styles, change colors, adjust layouts, and make web pages visually appealing.</p> <p>JavaScript: JavaScript is a programming language that adds interactivity to web pages. Start with the fundamentals, such as variables, data types, operators, and control structures.</p> <p>Responsive Web Design: Learn how to create websites that adapt and look good. Understand the concepts of fluid layouts, media queries, and responsive frameworks like Bootstrap.</p>
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Understanding of Web programming Principles: Learn the fundamentals of web development, including concepts like client-server architecture, HTTP protocol, web standards.

	<p>Proficiency in HTML: Gain a thorough understanding of HTML and its syntax, allowing to create the structure and content of web pages effectively.</p> <p>Problem-Solving and Debugging Skills: Develop the ability to identify and solve web programming issues, debug code, and troubleshoot common errors.</p> <p>Collaboration: Learn to work collaboratively with other students.</p> <p>Competence in CSS: Develop skills in CSS to style web pages, control layout, and apply visual design concepts to enhance the appearance of websites.</p> <p>JavaScript: Acquire a solid foundation in JavaScript, enabling you to add interactivity, manipulate the Document Object Model (DOM), handle events, and implement dynamic functionality on web pages.</p> <p>Deployment and Hosting: Gain the knowledge to understanding the basics of web hosting.</p> <p>Continuous Learning and Adaptability: Develop a mindset of continuous learning, staying updated with new web technologies, frameworks, and best practices in order to adapt to the evolving field of web programming.</p>
<p>Indicative Contents</p> <p>المحتويات الإرشادية</p>	<p>Indicative content includes the following.</p> <p>Introduction to Web Development [6 hrs]</p> <p>Overview of web technologies</p> <p>Client-server architecture</p> <p>Introduction to HTML, CSS, and JavaScript</p> <p>HTML Fundamentals [30 hrs]</p> <p>HTML structure and syntax</p> <p>Basic HTML tags (e.g., headings, paragraphs, lists)</p> <p>Working with links and images</p> <p>Creating forms and input fields</p> <p>CSS Basics [24 hrs]</p> <p>Introduction to CSS and its role in web design</p> <p>CSS syntax and selectors</p> <p>Applying styles to HTML elements (e.g., colors, fonts, backgrounds)</p> <p>Box model and layout basics</p>

	<p>JavaScript Cores [10 hrs]</p> <p>Introduction to JavaScript and its role in web programming</p> <p>Variables, data types, and operators</p> <p>Control flow (conditionals and loops)</p> <p>Working with functions and events</p>
--	--

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	<p>Step-by-Step Tutorials: Provide detailed step-by-step tutorials that guide learners through the process of building web pages. Break down complex tasks into smaller, manageable steps, explaining each step clearly.</p> <p>Interactive Coding Exercises: Incorporate interactive coding exercises that allow learners to practice and experiment with code in a controlled environment. Online coding platforms and interactive coding challenges can be valuable resources for this purpose.</p> <p>Pair Programming: Facilitate pair programming, where two learners work together on the same codebase. This promotes collaboration, problem-solving, and sharing of knowledge and ideas.</p> <p>Online Resources and Tutorials: Direct learners to reputable online resources, tutorials, and documentation relevant to web programming. Websites like MDN Web Docs, W3Schools, and tutorials point, offer comprehensive guides and tutorials for beginners.</p> <p>Practice and Repetition: Emphasize the importance of practice and repetition in web programming. Encourage learners to write code regularly, solve coding challenges, and work on mini-projects to reinforce concepts and build coding skills.</p> <p>Hands-on Projects: Encourage learners to work on practical projects right from the beginning. Projects help apply theoretical concepts in a real-world context and provide a sense of accomplishment. Start with small, manageable projects and gradually increase complexity as skills progress.</p> <p>Real-World Examples and Case Studies: Provide real-world examples and case studies that demonstrate how web programming concepts are applied in practical scenarios. This helps learners connect theory to real-world applications.</p> <p>Incremental Learning: Introduce concepts gradually, starting with the basics and building upon them progressively. This helps learners develop a strong foundation and prevents overwhelming them with complex topics too early.</p>

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
<p>Module Objectives</p> <p>أهداف المادة الدراسية</p>	<p>Give the learner the statistical skills that enable him to work in the fields of statistic, calculating measures of statistic.</p> <p>The subject of statistics is a digital language and an art to express the variables and numbers accurately, and thus enables the student to benefit from this subject in the statistics and the programs that are important to him in most fields of life.</p> <p>Statistics course aims to develop ways and means of thinking and how to deal with various problems.</p> <p>Trying to think in sound ways and methods, specifically in solving problems and thus improving and developing society.</p>
<p>Module Learning Outcomes</p> <p>مخرجات التعلم للمادة الدراسية</p>	<p>Understand the fundamental concepts and principles of statistics, including data types, measurement scales, and sampling methods.</p> <p>Interpret and analyze data using descriptive statistical measures, such as measures of central tendency (mean, median, mode) and measures of variability (range, variance, standard deviation).</p> <p>Apply probability theory to analyze and make predictions about uncertain events, including calculating probabilities and understanding the laws of probability.</p> <p>Utilize basic principles of statistical inference to draw conclusions about a population based on sample data, including hypothesis testing and confidence intervals.</p> <p>Apply appropriate statistical techniques for analyzing relationships between variables, including correlation analysis and simple linear regression.</p> <p>Understand and interpret the results of statistical software output and graphical representations.</p> <p>Communicate statistical findings and interpretations effectively, both orally and in written form.</p>

	Develop critical thinking and problem-solving skills in the context of statistical analysis and interpretation.
Indicative Contents المحتويات الإرشادية	<p>familiarize students with the basics of statistics, its fields of application. [10 hrs]</p> <p>the statistical method in scientific research, methods of data collection. [20 hrs]</p> <p>classification and presentation for the purpose of obtaining the necessary information to make appropriate decisions and the possibility of using this data in prediction, in addition to developing students. [10 hrs]</p> <p>skills in research design method. [20 hrs]</p> <p>bringing the student to a level where he has the ability to interpret the results and turn them into a practical reality. [8 hrs]</p>

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering types of simple experiments involving some sampling activities that are interesting to the students in the statistical methods.

Module Evaluation					
تقييم المادة الدراسية					
As		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	2	10% (10)	5, 10	LO #1, 2 and 4
	Assignments	2	10% (10)	2, 12	LO # 6
	Projects / Lab.				
	Report	1	10% (10)	13	LO # 3,5
Summative assessment	Midterm Exam	1 hr	10% (10)	7	LO # 1-6
	Final Exam	2 hr	60% (60)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)	
المنهاج الاسبوعي النظري	
Week	Material Covered
Week 1	المدخل للديمقراطية , التعريف العام للديمقراطية
Week 2	انواع الديمقراطية , خصائص النظام الديمقراطي
Week 3	مميزات النظام الديمقراطي , اهم الاستنتاجات عن النظام الديمقراطي
Week 4	المرتكزات الفكرية للديمقراطية , قياس الديمقراطية , نظرة الاسلاميون للديمقراطية
Week 5	الديمقراطية والشورى , الديمقراطية والرأسمالية

Week 6	عناصر النمط الديمقراطي , الاسس العامة للديمقراطية , عناصر الديمقراطية
Week 7	مراجعة سريعة , امتحان
Week 8	المشاركة السياسية , اهم انماط المشاركة السياسية
Week 9	الانتخابات , شروط الانتخابات وشروط الناخب والمنتخب
Week 10	صفات الانتخابات , انواع القوانين الانتخابية , طرق الانتخابات
Week 11	اهمية الانتخابات , الرقابة على الانتخابات , النواب والمسؤولية , البرلمان , اهم الصلاحيات التي يتمتع بها البرلمان
Week 12	المعارضة , مستويات المعارضة , اهداف المعارضة , عناصر تحديد موقع المعارضة , الفصل بين الحكومة والبرلمان
Week 13	مبادئ الدستور الديمقراطي , الشروط العامة للديمقراطية , الحزب السياسي اشكال وانواع الاحزاب السياسية
Week 14	التداول السلمي والشرعي للسلطة , احترام مبدأ الاغلبية , الديمقراطية النيابية
Week 15	الامتحان الفصلي
Week 16	مراجعة قبل الامتحان النهائي

Learning and Teaching Resources		
مصادر التعلم والتدريس		
	Text	Available in the Library?
Required Texts	أ- الكتب الدراسية والمنهجية المقررة من اللجنة العلمية ولجان الاعتماد والأكاديمي .	Yes
Recommended Texts	ب- المحاضرات المؤرخة من قبل تدريسي الاختصاص لكل مادة ورقية كانت أم فيديو	No
Websites	ج- مواقع شبكة الانترنت الرسمية المعتمدة من قبل الجامعة .	

Grading Scheme				
مخطط الدرجات				
Group	Grade	التقدير	Marks (%)	Definition

Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 – 49)	FX – Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F – Fail	راسب	(0-44)	Considerable amount of work required

ملاحظة : سيتم تقريب العلامات العشرية أعلى أو أقل من ٠,٥ إلى العلامة الكاملة الأعلى أو الأدنى (على سبيل المثال ، سيتم تقريب علامة ٥٤,٥ إلى ٥٥ ، في حين سيتم تقريب علامة ٥٤,٤ إلى ٥٤. لدى الجامعة سياسة عدم التفاوضي "فشل التمرير القريب" لذا فإن التعديل الوحيد للعلامات الممنوحة بواسطة العلامة (العلامات) الأصلية سيكون التقريب التلقائي الموضح أعلاه

Prerequisite module	None		Semester

Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	<p>١-تقوية القدرة اللغوية لدى الطالب وإكسابه مهارة التعبير الصحيح</p> <p>٢- تنمية قدرات الطالب ومهاراته الخطية والاملائية ليتمكن من كتابة البحوث العلمية والتقارير بصورة صحيحة , وكذلك يتمكن من استعمال علامات الترقيم ووضعها في المكان المناسب في الجملة ,</p> <p>٣- تدريب الطالب على استخدام القواعد النحوية أثناء القراءة والكتابة والتعبير</p> <p>٤- تعويد الطالب على فهم المادة المقروة والتعبير عنها بلغته الخاصة وذلك مما يشجع الطالب على التفكير والابتكار .</p>		
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<p>يتوقع من الطالب بعد إنتهائه من دراسة مادة اللغة العربية تحقيق المخرجات الآتية :</p> <p>١-معرفة القواعد النحوية</p> <p>٢- معرفة كيفية توظيف ادوات اللغة العربية في كتابة اي بحث علمي</p> <p>٣- تعزيز المحتوى العربي على الشبكة العنكبوتية</p> <p>٤- التعلم الالكتروني واستخدام الحاسوب في التعليم</p>		
Indicative Contents المحتويات الإرشادية	<p><u>مفردات المادة :</u></p> <p>أهمية اللغة العربية : وهذا الموضوع الاول يتحدث عن أهمية اللغة العربية بصورة عامة مع ربط علاقة اللغة العربية بعلم الحاسوب (٤ ساعات)</p> <p>اقسام الكلام : وهذا موضوع يقسم الى ثلاثة محاور وهي الاسم والفعل والحرف (٨ ساعات)</p> <p>علامات الاعراب : يتحدث عن علامات اعراب الاسم والفعل ويقسم الى محورين علامات الاعراب الاصلية وعلامات الاعراب الفرعية (٨ ساعات)</p> <p>المبتدأ والخبر :يتناول مفهوم المبتدأ والخبر واعرابه (٦ساعات)</p> <p>كان واخواتها : هذا الموضوع يتعبّر تكملة لموضوع الافعال (٦ساعات)</p> <p>إن واخواتها : وهي من النواسخ , وهي احرف مشبهة بالفعل (٨ ساعات)</p> <p>العدد : وهذا الموضوع مهم جدا لانه يعلم الطالب كيفية كتابة العدد من ناحية التذكير والتأنيث (٢ ساعات)</p>		

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	<p>الطريقة المستخدمة لتعليم الطلاب مادة اللغة العربية هي القاء المحاضرة والشرح باستخدام السبورة وفي بعض الاحيان نستخدم الداتا شو باستخدام شرائح عرض برنامج البوربوينت (اذا كانت المادة تتطلب لذلك) وكذلك تضمن المحاضرة اسئلة توجه للطلاب لمعرفة مدى فهمهم للمادة , واعطاءهم الواجب البيتي وفي منتصف الفصل يطلب من كل طالب تقرير حول مادة او مفردة معينة , مع الاكثار من الاختبارات اليومية لتساعد في حفظ المادة ورفع مستواهم العلمي ايضا .</p>

	F – Fail	راسب	(0-44)	Considerable amount of work required
<p>Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.</p>
