1. Course Name: Geography of Africa and Australia 2. Course Code: 3. Semester / Year: 2024-2025 4. Description Preparation Date: 1-10-2024 5. Available Attendance Forms: In person 6. Number of Credit Hours (Total) / Number of Units (Total) 60 hours in 15 weeks 7. Course administrator's name (mention all, if more than one name) Name: Dr. Mohammed Salih Abbas Salih Email: mohammed.salih.a@uomosul.edu.iq 8. Course Objectives **Course Objectives** 1- Teaching regional geography as an important component of acquiring geographical information. 2- Learning the regional geography of Africa and Australia to gain insight into important geographical information. 3- Teaching students to read maps of Africa and Australia and how to interpret the mental image and connect it to geographical information. 9. Teaching and Learning Strategies - Enabling students to acquire a conceptual framework for the Strategy subject of regional geography of Africa and Australia. - Preparing students to teach the subject in schools. - Preparing students educationally and professionally. - Providing specialized advice to institutions and departments in relevant ministries. 10. Course Structure Week Hours Required Learning Unit or subject **Evaluation** Learning method **Outcomes** method name

1	4	Introducing the student to an introduction, general idea, and basic definitions	Physical geography of Africa and Australia	Discussion and exchange of views	Lecture and discussion style
2	4	Introducing the student to the geographical and astronomical location	Geographical and astronomical location	Discussion and exchange of views	Lecture and discussion style
3	4	Introducing the student to the geological formation	geological formation	Discussion and exchange of views	Lecture and discussion style
4	4	Introducing the student to the surface and terrain	Surface and terrain	Discussion and exchange of views	Lecture and discussion style
5	4	Introducing the student to climate and climatic regions	Climate and climatic regions	Discussion and exchange of views	Lecture and discussion style
6	4	Introducing students to water resources	water resources	Discussion and exchange of views	Lecture and discussion style
7	4	Introducing the student to soil and natural plants	soil and natural vegetation	Discussion and exchange of views	Lecture and discussion style
8	4	Introducing the student to the human geography of the continents of Africa and Australia	Human geography of Africa and Australia	Discussion and exchange of views	Lecture and discussion style

9	4	Introducing	Donulation and	Discussion	Lecture and
9	4		Population and		
		the student to	demographic	and exchange	
		population	characteristics	of views	style
		and			
		demographic			
		characteristics			
10	4	Introducing the	Agriculture and	Discussion	Lecture and
		student to	Livestock	and exchange	discussion
		agriculture and		of views	style
		animal wealth			
11	4	Introducing	Mineral wealth	Discussion	Lecture and
		the student to		and exchange	discussion
		mineral wealth		of views	style
12	4	Introducing	Industry	Discussion	Lecture and
		the student to		and exchange	discussion
		the industry		of views	style
13	4	Introducing t	Transportation	Discussion	Lecture and
		student		and exchange	discussion
		transportation		of views	style
14	4	Introducing	Economy and	Discussion	Lecture and
		the student to	Trade	and exchange	discussion
		economics and		of views	style
		commerce			
15	4	Introducing	Regions:	Discussion	Lecture and
		the student to	Central Africa	and exchange	
		the regions	and Australia	of views	style
		0			

5 points for daily preparation 10 points for monthly exams 25 points for mid-year exams

60 points for final exams

### 1. Course Name:

Weather and climate

#### 2. Course Code:

### 3. Semester / Year:

2024-2025

#### 4. Description Preparation Date:

Annual course

#### 5. Available Attendance Forms:

My presence

#### 6. Number of Credit Hours (Total) / Number of Units (Total)

Theoretical(2) Hours. Practical (1) Hours/Units (2)

### 7. Course administrator's name (mention all, if more than one name)

Name: Assist. Prof. Dr:Khalid Satam Atiyah Email: khalidsetam80@uomosul.edu.iq

#### 8. Course Objectives

- Course Objective It is determined to prepare new, highly educated cadres.
  - Able to practice teaching and transferring skills to students.
  - Understanding and comprehending meteorology and climate science, its methodology and fields of study.
  - Reviewing the latest studies, sources and research methods and harnessing them to serve the teaching and learning of climate.

#### 9. Teaching and Learning Strategies

#### Strategy

- 1. Focus on climate studies and the sources from which weather originates.
- 2. Understanding weather and climate, measuring them, and extracting their requirements.
- 3. Specific topics for studying the various sectors of meteorology and climate.
- 4. Methods for studying climate phenomena and training students on the including the equations and methods used to extract them, such as drought a visualization, etc.
- 5- It aims to increase students' focus and awareness of the importance of clim science and its significant role on humans, their various activities, and environment in which they live.

Week	Hours	Required	Unit or subject name	Learning	Evaluation
		Learning		method	method
		Outcomes			
The first	2		The concept of weather and climate science and its study trends	discussion	
The second	2		Branches of weather and climate science	discussion	
The third	2		The gaseous envelope and its layers	discussion	
the fourth	2		Pollution and its impact on climate	discussion	
Fifth	2		Solar radiation, factors affecting it, and methods of measuring it.	discussion	
VI	2		Temperature rates, factors affecting them, methods of measuring them.	discussion	
VIII	2		Atmospheric pressure, factors affecting i methods of measuring it. Winds, factors affecting them, and metho of measuring them.	discussion	
Ninth	2		Relative humidity, factors affecting it, and methods for measuring it.	discussion	
The tenth	2		Rain, precipitation, factors affecting it, an methods of measuring it.	discussion	
Eleventh	2		Evaporation, factors affecting it, and meth of measuring it.	discussion	
twelveth	2		Air masses, factors affecting them, and methods of measuring them.	discussion	
Thirteenth	2		Weather depressions, factors affecting the and methods of measuring them.	discussion	
fourteenth	2		Atmospheric heights, factors affecting the and methods of measuring them.	discussion	
Fifteenth	2		Storms and hurricanes, the factors affecting them, and methods of measuring them.	discussion	
The sixteenth	2		Weather phenomena (fog, frost, hail, thu lightning) Air masses, factors affecting them, and methods of measuring them.	discussion	

week			
Eighteen	2	Weather depressions, factors affecting the and methods of measuring them.	discussion
nineteenth	2	Atmospheric heights, factors affecting the and methods of measuring them.	discussion
The twentieth	2	Storms and hurricanes and the factors affecting them and their measurement.	discussion
21st	2	Weather phenomena (fog, frost, hail, thur lightning)	discussion
Twenty tow	2	Phenomena (dust storms, suspended dust, edust) Weather forecasting and accordingly	discussion
Twenty third	2	Next Climate (causes - results - consur The city's climate is a model of local clin change	
Twenty fourth	2	Return to the biological environment Climate contributed to water sources	discussion
Th25	2	Climate changes (causes - results - treatments)	discussion
Twenty- sixth	2	The city's climate is a model of local clin change	discussion
th27	2	The impact of climate on the biological environment	discussion
Twenty- eighth	2	The impact of climate on water sources	discussion
		·

**UOMEG1422** 

3. Semester / Year:

Annual

4. Description Preparation Date:

01/09/2024

5. Available Attendance Forms:

Traditional lectures

Blended learning

E-learning

6. Number of Credit Hours (Total) / Number of Units (Total)

Hours (2) Units (4)

7. Course administrator's name (mention all, if more than one name)

Name: Prof. Dr. Ahmed Hamed Ali

Email: dr.ahmed.h.ali@uomosul.edu.iq

8. Course Objectives

#### **Course Objectives**

- 1. Introduce students to the basic concepts related to political geography.
- 2. Enable students to identify the elements of state power and those responsible for its foreign relations.
- 3. Analyze the spatial relationships between natural and human geographic phenomena as foundations of political geography.
- 4. Develop students' skills in studying the relationship between humans and the environment in the fields of political geography.
- 5. Provide students with knowledge of quantitative methods and theories that reveal the importance of political geography.
- 9. Teaching and Learning Strategies

#### Strategy

- Lecture.
- Discussion.
- Collaborative learning.
- Brainstorming. Project-based learning.
- Problem-based learning.
- Mind and concept maps.
- Inquiry and discovery.

#### 8. Course Objectives

#### **Course Objectives**

- Preparing qualified teachers who have the ability to understand and analyze the Applied climate subject and teach it to students according to an established and modern scientific methodology that serves the specialty it is one of the modern specializations that relate humans.
- Developing students skills and awareness and finding solutions to understand the the departments and fields of study of applied climate science.
- Training students to exploit modern technologies to familiarize themselves with the latset climate sources and studies of interest subject, and to attending electronic lectures, seminars, and conferences related to applied climate studies.

# 9. Teaching and Learning Strategies

#### Strategy

- Discussion, questioning during the weekly lectures, contributions to Training solutions to mathematical probems and statistical methods Used for various applied climate topics.
- Encouraging students to understand, analyze science, and find solutions to problems related to the applied envirronment .
- Access to modern methods of education and delivery scientific material to students, and transfer of skills and information applied climate sciencs .

Week	Hours	Required	Unit or subject	Learning method	Evaluati
		Learning	name		on

Hussein Ali Rashid - hussein.alzoury@uomosul.edu.iq				
8. Course Objectives				
Course Objectiv  • 1. Developing scientific communication skills regarding geographical				
concepts studied by the student in previous stages.				
2. Preparing for the university study phase by relying on learning and				
scientific research to prepare the student to become a successful teacher				
and geographical researcher.				
3. Equipping the student with skills to handle modern geographical				
information.				
4. Teaching the student methods of using geographical technology				
programs, both offline and online.				
<ul> <li>5. Instilling in the student a positive motivation towards study</li> </ul>				
contemporary geographical technologies.				
9. Teaching and Learning Strategies				
Strategy  Discussion and questioning through weekly lectures, positive questions, and linking them to real-life scenarios.				

### 10. Course Structure

Week	Hours	Unit or subject name	Learning method	Evaluation method
1. The first 2. The second 3. The third 4. The fourth 5. The fifth 6. The sixth 7. The seventh 8. The eighth 9. The ninth 10. The tenth 11. The eleventh 12. The twelfth 13. The thirteenth 14. #### 8. Course Objectives

#### **Course Objectives**

- 1. Introduce students to the basic concepts related to the geography of transport and international trade.
- 2. Enable students to identify the types of land, air, and sea transport systems and the types of international and interregional trade.
- 3. Analyze the spatial relationships between transport systems and natural and human geographical phenomena.
- 4. Develop students' skills in studying the relationship between humans and the environment in the fields of transport geography.
- 5. Provide students with knowledge of quantitative methods and theories that reveal the importance of transport and trade geography.

#### 9. Teaching and Learning Strategies

#### Strategy

- Lecture.
- Discussion.
- Collaborative learning.
- Brainstorming.
- Project-based learning.
- Problem-based learning.
- Mind and concept maps.
- Inquiry and discovery.

8.	Course Objectives		
Course	e Objectives	•	Preparing qualified teachers who have the abi
			to understand and analyze the subject of deta
			climate science and teach it to students
			according to an established and modern
			scientific methodology that serves the special
		•	Developing perception, causality, and
			questioning skills and finding solutions to the
			to understand the sections and fields of study
			detailed climate science.
		•	Training students to exploit modern technolog
			to view the latest climate sources and studies
			interest to the subject, and to attend electronic
			lectures, seminars, and conferences that
			specialize in detailed climate studies

## 9. Teaching and Learning Strategies

#### Strategy

Discussion, questioning during weekly lectures, presenti realistic examples of the detailed climate

- Encouraging students to understand, analyze scientifical and find solutions to problems related to the detailed climat
- Identify the most important detailed climate patterns a compare them.
- Access to modern methods of teaching, delivering scienti material to students, and transferring skills and informati related to detailed climate science

### 9. Course Objectives

- 1. Introducing students to the basic concepts related to natural resources and the Earth's spheres (lithosphere, hydrosphere, atmosphere, biosphere), and understanding the relationship between these spheres and their impact on different environments.
- 2. **Enabling students to recognize the importance of natural resources** and the mechanisms for their conservation and sustainability by shifting toward environmentally friendly resources, minimizing future harm, and avoiding climate change.

- 3. **Developing third-stage students' ability to interpret and analyze** in order to solve problems affecting the four spheres, by enhancing human resource capabilities for optimal investment without compromising the reserves of future generations.
- 4. **Increasing students' field visits to strategic projects** related to (water security, food security, and green education).
- 5. **Enhancing students' scientific and cognitive capabilities** by preparing reports on pioneering projects and marketing mechanisms for them.

10. Teaching and Learning Strategies
Lecture
discussion
Collaborative Learning
Brainstorming
Project-Based Learning
Problem-Based Learning
Investigating and identifying natural problems before they develop into phenomena that are difficult to solve.
Inquiry and Discovery Learning
E-Learning
Field Trips

11. Expected Learning Outcomes for the Course					
Knowledge	Learning Outcome Code	Learning Outcome Code Related to the Program			
	N	N			
The student identifies the basic concepts related to the Earth's spheres and their relationship to sustainable development.	1	1			
The student interprets the causes of problems within the Earth's spheres that have affected the ecosystem.	2	1			
The student analyzes the outcomes of adopting natural resource sustainability and shifting toward environmentally friendly materials.	3	1			
The student determines the possibility of reducing pressure on	4	1			

natural resources by relying on technological development.			
A mechanism to engage students in proposing simple solutions to problems, or at the very least, participating in volunteer activities related to the subject of natural resources, such as tree planting campaigns.	5	1	
Emphasis on the student's ability to understand the laws related to the mechanisms of investing in natural resources.	6	1	
Skills	Learning Outcome Code	Learning Outcome Code Related to the Program	
	M	M	
Ability to collect data and information from relevant institutions according to the topics assigned for preparing reports.	1	1	
Present scientific reports on the topics of natural resources using accurate research methods and the use of artificial intelligence.	1	2	
Organize and participate in awareness campaigns to raise public awareness about the importance of natural resources and the need to preserve the reserves for future generations.	1	3	
Develop the student's cognitive and technical skills, including the use of Geographic Information Systems (GIS).	1	4	
Find alternative solutions through scientific and technical approaches aimed at serving the population and preserving the stock of natural resources.	1	5	
Preserving natural resource reserves contributes to solving future problems	1	6	
Values	Learning Outcome Code	Learning Outcome Code Related	

		to the Program	
	ق	ق	
Develops a sense of responsibility toward the environment and promotes positive environmental behavior.	1	1	
Commits to sustainable environmental practices and encourages others to adopt them.	2	2	
Shows interest in environmental issues and participates in community environmental initiatives.	3	2	
Promotes teamwork and collaboration in solving environmental problems.	4	1	
Values the importance of environmental legislation and advocates for its implementation to protect environmental resources for future generations.	5	1

4	Distance Learning	-	-				
5	Other (Laboratory)	-	-				

Total	52	100

#### 9. Course Objectives

- 1. To introduce students to the basic concepts of general maps and thematic maps in particular
- 2. To enable students to identify the different types of thematic maps
- 3. To analyze the various methods of cartographic representation and data encoding in the context of thematic maps
- 4. To develop students' skills in studying the relationship between different methods of cartographic representation for the various symbols used
- 5. To impart to students a preliminary knowledge of the programs used for drawing, displaying, processing, and analyzing both general and thematic maps.

### 10. Teaching and Learning Strategies

- Lecture
- Discussion
- Cooperative Learning
- Brainstorming
- Project-Based Learning
- Problem-Based Learning
- Mind Mapping and Concept Mapping
- Inquiry and Discovery
- E-Learning
- Field Trips

11. Expected	11. Expected Learning Outcomes for the Course							
Program-	Learning	Knowledge						
Related	Outcome							
Learning	Code							
Outcome								
Code								
N	N							
IN	IN							
1	1	The student defines the basic concepts related to thematic maps The						
1	1	student defines the basic concepts related to thematic maps						
1	2	The student analyzes the reasons for diversity present in thematic mans						
1	2	The student analyzes the reasons for diversity present in thematic maps						
1	2	The student distinguishes between different types of data used to						
1	3	represent surface phenomena.						

1	4	The student identifies the basic problems in the graphical representation of mapping symbols in thematic maps.
1	5	The student discusses proposed solutions in the graphical representation of symbols used in thematic maps
1	6	The student explains the rules and principles in cartographic representation methods in the context of thematic maps.
Learning Outcome Code Program- Related	Learning Outcome Code	Skills
M	M	
1	1	The student collects data used from multiple and diverse sources.
1	2	The student presents scientific reports on issues related to thematic maps using precise research methods.
1	3	The student organizes and participates in exhibitions and conferences for the Department of Geography within the cartographic drawing activities
1	4	The student uses methods to classify and categorize data used in geographic representation.
1	5	Design and draw thematic maps related to the topics and environments that the student is present in
1	6	Interprets thematic maps according to the type and mechanism of cartographic representation used in them.
Learning Outcome Code Program- Related	Learning Outcome Code	Values
Q	Q	
1	1	linked to the program. Develops a sense of responsibility towards the prescribed curriculum and its role in all branches and fields of geography.
2	2	Adheres to the scientific basis in producing and drawing thematic maps
2	3	Shows interest in cartography, which is connected to maps in every department and branch in geography
1	4	Enhances the spirit of teamwork and collaboration in solving and understanding thematic maps
1	5	Appreciates the importance and role of thematic maps in understanding the distribution and spread of geographical phenomena on Earth

- 9. Course Objectives
- 1. Introducing students to the basic concepts in the geography of industry.
- 2. Introduction to the principles of industry and factors of industrial localization.
- 3. Introducing students to research methods in industrial geography and sources of data.
- 4. Enabling students to identify the types of industries (extraction and transformation) and understand their inputs and outputs.

### 10. Teaching and Learning Strategies

- Lecture

11. Expected Learning Outcomes for the Course				
Program- Related Learning Outcome Code	Learning Outcome Code	Knowledge		
N	N			
1	1	The student defines the basic concepts related to the geography of industry.		
1	2	The student is able to understand research methods in industrial geography and sources of data.		
1	3	The student distinguishes between the types of industries (extraction and transformation).		
1	4	The student identifies the main factors of industrial localization.		
1	5	The student discusses the proposed solutions for addressing the negative impacts of industries (pollution in its various forms).		
1	6	The student learns about the most important theories related to the		

		geography of industry.
Learning Outcome Code Program- Related	Learning Outcome Code	Skills
M	M	
1	1	It collects data used from multiple and varied sources.
1	2	It provides scientific reports on issues related to the geography of industry using precise research methods.
1	3	He organizes and participates in exhibitions and conferences related to the geography department as part of the activities related to the subject.
1	4	Students' participation in field visits to selected industries to learn about them firsthand.
1	5	Students propose solutions to some problems faced by certain industries.
Learning Outcome Code Program- Related	Learning Outcome Code	Values
Q	Q	
1	1	It develops a sense of responsibility towards the prescribed curriculum and its role in all branches and fields of geography.
2	2	He adheres to the scientific basis in the subject of industrial geography.
2	3	It shows an interest in geography in general, which you cannot find any section or scientific branch without a connection to it.
1	4	It enhances the spirit of teamwork and collaboration in solving and understanding issues related to the geography of industry.
1	5	He appreciates the importance and role of industry in the development and progress of nations in various fields.

Preparing qualified teachers who have the ability
understand and analyze the subject of detailed
climate science and teach it to students according
to an established and modern scientific
methodology that serves the specialty.
Developing perception, causality, and questionin
skills and finding solutions to them to understand
the sections and fields of study of detailed clima
<ul> <li>science.</li> <li>Training students to exploit modern technologies</li> </ul>
• Training students to exploit modern technologies view the latest climate sources and studies of
Tion the latest chillage sources and studies of

lectures, seminars, and conferences that speciali
in detailed climate studies

### 9. Teaching and Learning Strategies

#### Strategy

Discussion, questioning during weekly lectures, presenti realistic examples of the detailed climate

- Encouraging students to understand, analyze scientifically, a find solutions to problems related to the detailed climate.
- Identify the most important detailed climate patterns a compare them.
- Access to modern methods of teaching, delivering scienti material to students, and transferring skills and informati related to detailed climate science

#### 10. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2		Define the concept microclimatology.	discussion	
2	2		Evolution of microclimatology	Discussion	
3	2		Research methods and tools in microclimatology	Discussion	
4	2		Using remote sensi to study micro weather and climat		
5	2		The importance studying the detail climate Methods that can adopted in studying climate		
6	2		Selected models micro cave climate	Discussion	

7	2	Forest climate	Discussion	
8	2	Soil surface climate	Discussion	
9	2	Climate of snow, and water surfaces	Discussion	
10	2	Mountain climate	Discussion	
11	2	Valley climate	Discussion	
12	2	Semester exam		
13	2	Theoretical exam (mid-year)		
14	2	Theoretical exam (mid-year)		
15	2	Desert climate	Discussion	
16	2	Criteria for determining desert climate	Discussion	
17	2	Types of deserts	Discussion	
18	2	Climate of the c and the surroundi countryside	Discussion	
19	2	Factors that he shape the cit climate	Discussion	
20	2	The basic characteristics of tl city's climate	Discussion	
21	2	A general comparison between the climate of the cand the surroundir countryside	Discussion	
22	2	Climate in closed environments	Discussion	

23	2	Room climate and c	Discussion
24	2	Discussing stude research	discussion
25	2	Semester exam	
26	3	final exam	
27	3	final exam	
28	3	final exam	

### 11. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports .... etc

### 12. Learning and Teaching Resources

12. Learning and readiling Resources	,
Required textbooks (curricular books, if any	There is no new material.

### 11Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports .... etc

according to the tasks assigned to the student, such as daily preparation, daily oral exams, monthly written exams, reports, etc. This section specifies how grades will be allocated based on different types of assessments and tasks during the course.

12 Learning and Teaching Resources						
Required textbooks (curricular books, if any)	All the prescribed books for the subject, especially the modern ones.					
Main references (sources)	Industrial Geography Book/ Prof. Dr1 Abdul Zahra Ali Al-Janabi 2013. The Geography of Industry: -2 Contemporary Perspectives/ Prof. Dr. Muhammad Azhar Al-Samak 2008.					
Recommended books and references (scientific journals, reports)	I recommend adopting modern sources, including: The Geography of Industry: Between Methodological and Contemporary Study/ Dr. Dumran Bandar Murad - Assistant Professor Salam Fadhel Ali 2016 - In addition to all academic studies and scientific research published in academic scientific journals that are related to the vocabulary of the subject.					
Electronic References, Websites	All studies published on the Internet that are related to the geographic vocabulary of industry.					

### Dr. Muharab Khalaf King Ismail
