

Laboratories of the Department of Dams and Water Resources Engineering

Survey laboratory

The primary goal of the Survey Laboratory is to present and develop the basic concept for field engineering surveying by preparing students to perform engineering measurements. And Training students on the main surveying equipment and developing skills Students organize and schedule field information. At the end of the semester, you must. Students have the ability to make measurements and have knowledge of surveying instruments They possess the necessary technical skill in this field as well as the skill Necessary to organize and record field information. The Surveying Laboratory offers practical lessons about the transformed the survey theory, starting from the tape into an integrated monitoring station device. Which Various instruments include: tape, level, theodolite and monitoring station Integrated.
