mission.

### Expected learning outcomes of the program

#### Knowledge

A1- The basic, applied and engineering science principles necessary to provide architecture specialization, such as mathematics, stereotyping, physics, engineering drawing, statistics, computer techniques and automation.

A2. Specialized architecture sciences cover various aspects of architectural design,

implementation, construction, executive drawings, architectural and free drawing, as well as interior design, outdoor space design, urban design, and city planning. Architecture is concerned with many aspects and interacts with many sciences and contributes to important applications in everyday life.

**A3**. Professional objectives and supporting foundations: Supporting skills include application within theoretical frameworks, such as reporting and research, as well as knowledge of economic, legal, health, social and security determinants.

Skills

**1b.** Design skills: Capability to create innovative and sustainable architectural designs, including interior design and design of outdoor and urban spaces.

**2b.** Research and analysis skills: developing research and information collection and analysis skills for application in design projects, including environmental, economic, and social considerations.

**3.b.** Communication and collaboration skills: Enhance effective communication and teamwork skills with classmates and specialists in multiple areas, including writing reports and presenting ideas clearly and convincingly.

Ethics

C1 Creativity and Innovation: Enhancing the values of creativity and innovation in the design and research process, contributing to the development of innovative and sustainable architectural solutions.

C2 Social and environmental responsibility: Promote awareness of the architect's social and environmental responsibility and ensure the application of sustainable development principles in design and construction projects.

Week	Mate	rial Covered							

Week 1	Monge's Orthographic Projection. Defining points for Monge's descriptive geometry analysis
Week 2	Defining lines for Monge's descriptive geometry analysis
Week 3	Solve for various projections (1) such as: True size and shape projections, True angles, Distances between points and lines.
Week 4	Solve for various projections (2) such as: True size and shape projections, True angles, Distances between points and lines.
Week 5	Midterm exam
Week 6	Auxiliary Views. Defining principal views relative to spatial analysis and expanding the principles of basic views to auxiliary view application
Week 7	Introduction and definition of engineering drawing for students, including the following: Learn about engineering tools and how to use them. * Types of pens used in drawing geometric shapes. * Billboard layout and addresses field numbers. * How to deal with the engineering board and the engineering board and how to install it on the board. Types of lines in engineering drawing: visible lines, hidden lines, center lines, dimension lines, cutting lines.
Week 8	<ul> <li>Various engineering operations:</li> <li>* Introducing the drawing scale and its types: civil, mechanical, zoom-in and zoom-out scale. Teach students how to apply and draw the following engineering operations:</li> <li>* Drawing a straight line parallel to a known straight line from a point outside it.</li> <li>* Drawing a perpendicular bisector of a known straight line Draw tangents and learn about tangent points and how to locate them</li> </ul>
Week 9	Various engineering operations * Draw a known arc so that it touches two known lines between which there are angles: right, acute and obtuse. * Finding the center of a known arc tangent to a known straight line and a known circle arc, inner circle arcs, and outer circle arcs. * Finding the center of a known arc that touches the arc of a known circle and passes through a point outside it. Draw the inverted shape
Week 10	Quiz
Week 11	Perpendicular projection theory of objects * Types of projection in drawing and its practical importance * Projections with vertical rays * Types of projections resulting from vertical projection and approved in the projection of various engineering objects The front, vertical, right side and left side view * How to arrange and draw the projections required for any object on the drawing board
Week 12	Drawing three-dimensional figures * Types of three-dimensional figures and their practical benefits * Isometric
Week 13	Linking the given projections with the process of imagining and drawing the analogous body Drawing axes of measurement and how to put dimensions on them
Week 14	Drawing the deleted third position of the body * How to deduce the omitted location from two known locations of the body

Week 1UWeek 2DWeek 2DWeek 3DWeek 4DWeek 5QWeek 6SWeek 6SWeek 7AWeek 8MWeek 9DWeek 10DWeek 12DWeek 13DWeek 14MWeek 15A	ools. Module Aims أهداف المادة الدراسية	<ul> <li>Introduction to Art and Architecture: The aim of this module is to provide students with a broad understanding of the relationship between art and architecture, and the relations between architecture and other sciences, introducing key concepts and terminology in the field.</li> <li>Elements of Design: The aim of this module is to introduce students to the fundamental elements of design and how they apply it to both art and architecture. Students will develop an understanding of how these elements contribute to the aesthetics and functionality of architectural design.</li> <li>Principles of design: The aim of this module is to introduce students to the Principles of design and Identify and distinguish how the principles of design apply in architecture. Students will</li> </ul>							

	• Architectural composition, types of geometric forms' connections, articulation of forms
	and corners and their application in art and architecture
	• Architectural trends and movements in art and architecture, (art nouveau, cubism).
	• Historical Architectural Styles: This module aims to familiarize students with the major
	architectural styles throughout history, from ancient to contemporary, enabling them to recognize
	and analyze different architectural styles and their characteristics.
	• Materials and Construction: The aim of this module is to introduce students to different
	construction materials and their applications in architecture. Students will gain knowledge about the
	properties and characteristics of materials, enabling them to make informed material choices in their
	designs.
	• into how technology is shaping the future of architecture and Interior Design: This module
	aims to introduce students to the principles of interior design within architectural spaces. Students
	will learn how to create functional and aesthetically pleasing interiors, considering lighting,
	furniture, and material choices.
	• Landscape Design and Site Planning: The aim of this module is to provide students with an
	understanding of landscape design principles and their role in architectural projects. Students will
	learn how to integrate buildings with the surrounding landscape to create harmonious and
	sustainable designs.
	• Architectural Representation: This module aims to develop students' skills in architectural
	representation, including models, renderings, and digital visualization techniques. The goal is to
	equip students with effective communication tools to present their design ideas.
	• Emerging Technologies and Future Trends: This module aims to explore the impact of
	emerging technologies on architecture and to discuss future trends in the field. Students will gain
	<ul> <li>insights into challenges and opportunities it presents.</li> <li>Introduction to Art and Architecture:</li> </ul>
	Understand the relationship between out and englisher true
	<ul> <li>Use key concepts and terminology related to art and architecture.</li> <li>Historical Architectural Styles:</li> </ul>
	<ul> <li>Differentiate between major architectural styles throughout history.</li> </ul>
	<ul> <li>Analyze the characteristics and influences of various architectural styles.</li> </ul>
	<ul> <li>Elements of Design:</li> </ul>
	Apply design principles to create aesthetically pleasing and functional architectural
	designs.
	Drawing and Visualization:
	• Communicate design ideas effectively through drawings and visualizations.
Module	• Space and Scale:
Learning	• Manipulate spatial qualities and scale in architectural design.
Outcomes	Materials and Construction:
	• Evaluate construction materials used in architecture.
مخرجات التعلم	Make informed material choices for architectural applications.
للمادة الدراسية	Sustainable Design and Green Architecture:
	• Incorporate sustainable design principles and practices in architectural design.
	• Apply environmentally friendly materials and energy-efficient strategies.
	• Interior Design:
	Apply principles of interior design within architectural spaces.
	Landscape Design and Site Planning:     Integrate buildings with the surrounding environment through landscape design
	<ul> <li>Integrate buildings with the surrounding environment through landscape design.</li> <li>Architectural Representation:</li> </ul>
	<ul> <li>Arcmitectural Representation:</li> <li>Present architectural designs effectively using appropriate representation methods.</li> </ul>
	<ul> <li>Present arcmeetural designs effectively using appropriate representation methods.</li> <li>Emerging Technologies and Future Trends:</li> </ul>
	<ul> <li>Enlerging Technologies and Future Trends.</li> <li>Understand the impact of emerging technologies on architecture.</li> </ul>
	<ul> <li>Evaluate and discuss future trends in architecture.</li> </ul>

Indicative Contents المحتويات الإرشادية the relationship between art and architecture, major historical architectural styles, elements of design in architecture, drawing and visualization skills, space and scale in architectural design, materials and construction, urban design and planning, sustainable design and green architecture, architectural history, building structures, interior design principles, landscape design and site planning, architectural representation techniques, and emerging technologies and future trends in architecture. These condensed indicative contents provide an overview of the essential topics and concepts that will be covered in the curriculum on art and architecture

#### Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري

Week	Material Covered							
	Introduction to Art and Architecture							
	• Overview of the course and its objectives							
Week 1	• Understanding the basic principles of art and architecture							
	• Exploring the relationship between art and architecture							
	• Exploring the relationship between architecture and other sciences							
	Elements of Design							
Week 2	• Introduction to the elements of design (line, shape, form, color, texture, etc.)							
Week 2	• Understanding how these elements apply to both art and architecture.							
	• Examples of how artists and architects utilize these elements in their work.							
	• Principles of design							
	• Introduction to the Principles of design (identical, similarity, contrast, Gradation,							
Week 3	dominance, Balance, unity, etc.).							
	• Understanding how these Principles apply to architecture.							
	• Identify and distinguish how the principles of design apply in architecture							

Week 4       Importance of drawing skills in architecture         Week 4       Basic drawing techniques and exercises for architectural representation         Introduction to architectural drafting tools and conventions         Week 5       Understanding Space and Scale, proportion         Exploring the concepts of space and scale in art and architecture         Techniques for creating a sense of space in architectural design.         Examining how artists play with scale in their works         Week 5       Architectural composition         Week 7       Architectural composition         Week 8       Mid Term Exam         Week 8       Mid Term Exam         Week 8       Color Theory and Application         Basics of coor theory and its significance in art and architecture         Week 9       Exploring color paletes and their emotional impact on architectural spaces         Class studies of buildings that effectively use color in their design.         Week 10       Architectural Styles: From Classical to Contemporary         Week 11       Exploring the principles of interior design in architectural spaces         Exploring the principles of interior design in architectural spaces         Case studies of andscape architecture projects         Week 12       Landscape architecture projects         Week 13       Architectural Representation; Models and Visualiza											
Week 4     • Basic drawing techniques and exercises for architectural representation Introduction to architectural drafting tools and conventions       Week 5     • Understanding Space and Scale, proportion Exploring the concepts of space and scale in art and architecture • Techniques for creating a sense of space in architectural design. • Examining how artists play with scale in their works       Week 6     • Types of geometric forms' connections • articulation of forms and corners and their application in art and architecture Week 7     • Architectural composition       Week 8     • Mid Term Exam • Color theory and his significance in art and architecture • Exploring color palettes and their emotional impact on architectural spaces • Case studies of buildings that effectively use color in their design.       Week 9     • Architectural Styles: From Classical to Contemporary • Introduction to various architectural styles throughout history • Overview of classical architecture (Greek and Roman) • Exploring the principles of interior design in architectural spaces • Understanding the role of lighting, furniture, and materials in interior design • Case studies of well-designed interiors • Case studies of and Stre Planning • Case studies of and scape architecture projects • Understanding the inportance of effective communication in architectural representation • Understanding the inportance of effective communication in architectural • Understanding the inportance of effective communication in architecture • Trends in sustainable design practices in architecture • Understanding the inportance		•	Drawing Fundamentals for Architects								
•     Introduction to architectural drafting tools and conventions       Week 5     •     Understanding Space and Scale, proportion       •     Exploring the concepts of space and scale in art and architecture       •     Techniques for creating a sense of space in architectural design.       •     Architectural composition       •     Architectural composition       •     articulation of forms and corners and their application in art and architecture       Week 6     •     Architectural trends and movements in art and architecture.       Week 7     •     Architectural trends and movements in art and architecture.       Week 8     •     Mid Term Exam       Color Theory and Application     Basics of coort theory and its significance in art and architecture       Week 9     •     Case studies of buildings that effectively use color in their design. Module Aims ف المادة الدر اسية	<ul> <li>The aim of studying the democracy and human rights to Understand the concept of human rights and explore the international, regional, national, and religious sources.</li> <li>Define administrative corruption, explore its types, and effects on society. Study methods to combat administrative corru transparency, accountability, and good governance.</li> <li>Trace the historical development and evolution of huma milestones and movements that have shaped the modern understa</li> <li>Differentiate between different categories of human right</li> </ul>							their sources, including Ind understand its detrimental Intruption and promote man rights, examining key rstanding of human rights. rights, including civil and I, cultural, and developmental o prevent human rights onal-level protections, and principles, values, and various idirect, and digital democracy. prehensive understanding of ring individuals to actively		

	• After these module aims, students should be able to:
	• Demonstrate a comprehensive understanding of the concept of human rights and
	their sources, including international, regional, national, and religious sources.
	• Identify and explain the fundamental characteristics of human rights, such as
	universality, indivisibility, interdependence, and inalienability.
	• Analyze the historical emergence and evolution of human rights, including key
	milestones and movements that have shaped their development.
	• Differentiate between different categories of human rights, including civil and political rights, economic and social rights, and environmental, cultural, and developmental
	rights.
	<ul> <li>Evaluate and apply legal, institutional, and societal guarantees to prevent human</li> </ul>
Module Learning	rights violations, considering guarantees in Islam, at the national level, and within the
Outcomes	international framework.
	• Understand and discuss the concept of democracy, including its principles, values,
مخرجات التعلم للمادة	and different forms of democratic governance.
الدراسية	• Evaluate the Islamic stance on democracy and engage in critical analysis of the
	strengths and weaknesses of the democratic system.
	• Recognize and assess the impact of administrative corruption on society and
	propose methods to combat and prevent corruption in administrative systems.
	• Demonstrate critical thinking skills by analyzing and evaluating different
	perspectives on human rights, democracy, and corruption.
	• Apply acquired knowledge and skills to promote and protect human rights,
	democracy, and good governance in personal, professional, and civic contexts.
	• Overall, students should have a solid understanding of democracy and human
	rights, democracy, and corruption issues, and be able to apply this knowledge to contribute
	to the advancement of human rights and democratic values in society.
	The indicative content includes:
	1. Definition and sources of democracy and human rights (international, regional, national, religious) [2b]
	religious). [3h] 2. Characteristics of democracy and human rights: universality, indivisibility,
	interdependence, inalienability. [3h]
	3. Emergence and evolution of human rights: historical development, key milestones,
	influential movements. [3h]
	4. Types of human rights: civil and political, economic and social, environmental, cultural,
Indicative Contents	and developmental. [3h]
المحتويات الإرشادية	5. Guarantees to prevent human rights violations: legal, institutional, societal safeguards,
	Islamic guarantees, national and international levels. [3h]
	6. Concept of democracy: principles, values, forms of governance (direct, semi-direct,
	indirect). [3h]
	7. Islamic stance on democracy: compatibility, strengths, weaknesses. [3h]
	8. Critique of the democratic system: analysis of strengths and weaknesses. [3h]
	9. Administrative corruption: definition, types, societal impact. [3h]
<b>X 1 1 T 1 1</b>	10. Methods to combat administrative corruption. [3h]
Learning and Teaching	g Strategies
استراتيجيات التعلم والتعليم	• When it comes to learning and teaching strategies for a human rights module, there
	• When it comes to learning and teaching strategies for a human rights module, there are several approaches can be taken to enhance understanding and engagement. Here are
	some effective strategies:
	<ul> <li>Interactive Discussions: Encourage students to actively participate in discussions,</li> </ul>
	debates, and group activities. This promotes critical thinking, allows for different
Strategies	perspectives to be shared, and fosters a deeper understanding of human rights issues.
	• Case Studies: Present real-life case studies that highlight human rights violations or
	achievements. Analyzing these cases helps students apply theoretical concepts to practical
	situations and develops their problem-solving skills.
	Research Projects: Assign research projects on specific human rights topics or

Student Wor	research sk C projects or diverse per A presentation	cills. ollaborative I assignments. rspectives. ssessment Va ons, debates, a	Learnir This e riety: 1 nd qui	ng: Foster coll encourages tea Use a variety zzes, to asses	laboration among amwork, peer lea of assessment me	is, and the development of students through group rning, and the exchange of ethods, including essays, standing of human rights ons.

Module Aims, Lea والمحتويات الإرشادية			Indicative Contents أهداف ا						
Module Aims أهداف المادة الدراسية		<ul> <li>This course aims to teach students the basic principles of architectural design and presentation through introduces the student to methods of graphic representation essential to design professionals in the built environment. Design representation is taught both as a craft and as a method of thinking.</li> <li>Types of representation include freehand drawing (drawing from observation and from the imagination); analytic diagramming (the two-dimensional representation in idea or process);</li> <li>illustration graphics (symbolic representation), and technical drafting (conventions of plan, section, elevation and axonometric). Students will be exposed to analog (pencil-and-paper) and digital tools.</li> <li>The method of instruction will emphasize application of representation skills</li> </ul>							
Module Learning Outcomes ن التعلم للمادة الدر اسية	مغرجات	<ul> <li>The include of instruction will emphasize appreciation of representation sate response to project assignments.</li> <li>The purpose of this course also is to provide students with the necessary scientific and logical justification for the studied architectural as well as the exercise which they depend.</li> <li>General skills and other skills related to portability (Personal employment development).</li> <li>Teamwork within the group. Personal development through ethical values dealing with, and respect for the other opinion.</li> <li>Personal development through building the general and professional cultur background of the profession. Interaction with teaching staff as a guide educational administrative educational process.</li> </ul>							

Indicative بات الإرشادية		<ul> <li>Determine Creative thinking to apply design principles of composition and to deal with the level of mass and architectural space. Introduce opinions and deduce the nature of the application of design principles and the use of design elements in the studied architectural practice that achieve a collective agreement.</li> <li>Self-learning skill through self-reliance in the conclusion of solutions to design problems and knowledge. Based on the students' criticism and follow-up by the teaching staff to ensure that the talents and abilities of the students are exploited and utilized to achieve the objectives of the educational program.</li> </ul>

	c Program Objectives
Faculty/Institute	University of Mosul / College of Engineering
Scientific Department	Architecture Engineering Department
Academic System	Bologna Process
<ul> <li>Preparing qualified cadres in var quality standards.</li> </ul>	rious fields of knowledge in accordance with high
<ul> <li>Promoting scientific research in</li> </ul>	n theoretical and applied sciences, encouraging
_	nt programmed and ensuring that global scientific
developments are kept abreast an	
_	e curriculum at the undergraduate and postgraduate
developments.	nt scientific, methodological, and technical
• - Participation in the service of t	the community through continuous interaction with on of scientific consultations and the promotion of ed.
• • •	ngineering disciplines and developing relations with
_	ecture in building society and improving people's
them to practice the profession e	aduates in accordance with scientific rules to enable efficiently in architectural and urban design and d outdoor spaces, as well as preservation of heritage ientific methods.
• - Implementation of clear practic standards of architectural beauty	cal programmed on sustainability technology and y, while keeping pace with the development in the ag an architectural educational programmed based on
1 2	hitecture's educational process through the selection of odern curricula and the completion of self-assessment academic accreditation.
• - Empowering teaching staff in t increasing the proportion of doct	the Department of Architecture Engineering by toral holders compared to the master's campaign.
	search and design of applied projects to strengthen vith prestigious institutions and universities.
• - Developing graduate skills by	providing specialized continuing education courses a h them to enhance the achievement of the department

#### Expected learning outcomes of the program

#### Knowledge

A1- The basic, applied and engineering science principles necessary to provide architecture specialization, such as mathematics, stereotyping, physics, engineering drawing, statistics, computer techniques and automation.

A2. Specialized architecture sciences cover various aspects of architectural design,

implementation, construction, executive drawings, architectural and free drawing, as well as interior design, outdoor space design, urban design, and city planning. Architecture is concerned with many aspects and interacts with many sciences and contributes to important applications in everyday life.

**A3**. Professional objectives and supporting foundations: Supporting skills include application within theoretical frameworks, such as reporting and research, as well as knowledge of economic, legal, health, social and security determinants.

#### Skills

**1b.** Design skills: Capability to create innovative and sustainable architectural designs, including interior design and design of outdoor and urban spaces.

**2b.** Research and analysis skills: developing research and information collection and analysis skills for application in design projects, including environmental, economic, and social considerations.

**3.b.** Communication and collaboration skills: Enhance effective communication and teamwork skills with classmates and specialists in multiple areas, including writing reports and presenting ideas clearly and convincingly.

#### Ethics

C1 Creativity and Innovation: Enhancing the values of creativity and innovation in the design and research process, contributing to the development of innovative and sustainable architectural solutions.

C2 Social and environmental responsibility: Promote awareness of the architect's social and environmental responsibility and ensure the application of sustainable development principles in design and construction projects.

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM

المرحلة الثانية / التصميم المعماري (2)

## ARC 211 Architectural design (2): (Annual Course)

Theoretical part: Introduction, Primary Elements, Visual proportion of form, Primary shapes, Platonic solid, Regular and irregular forms, Transformation of form, Additive forms, Formal collisions of geometry, Articulation of form, Defining space with horizontal & vertical elements, Closure, Qualities of Architectural Space, Openings in space / Lighting, Spatial Relationships, Spatial Organizations, Circulation, Proportion and Scale, Practice/ Preliminary Presentation Ordering Principles, Practice/ Development

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM

المرحلة الثانية / الرسم اليدوي 3

## ARC 212 Freehand Drawing (3)

Students will draw more complex models, and learn new techniques in shading and using colors. Also we will focus on drawing building and landscape for developing and communicating ideas in the design process.

### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / تاريخ عمارة قديمة

## ARC 214 History of Ancient Architecture

The Course Deals with the evolution of architecture in Iraq in the ancient times and architecture in the Arab countries (Egypt and Syria) and neighboring countries (Asia Minor, Persia, Greece) and to clarify the effects of mutual design among them. The study will also clarify the relationship of the design concept of the buildings with the natural surroundings and cultural development within its period, and the relationship with the functional requirements and solutions to construction and environmental processors and integration with architectural form.

#### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المادة الدراسية 1 المرحلة الثانية / الرسم بمساعدة الحاسوب 1

## ARC 215 Computer Aid Drawing (1)

Introduction to Computer-Aided Drafting and Design which includes: 2D drawings, 3D modeling, rendering, and Image processing. Major CAD drafting, and presentation software tools will be used for the production, management, and

presentation of project information. Introduction to utilization of modeling and simulation software tools in Architectural Engineering.

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / تركيب مباني 1

#### **ARC 216 Buildings Constructions (1)**

This course initially the basic principles of construction elements constituting architectural spaces and other associate systems common to construction. It introduces students to the various construction phases from concrete foundation to finishing. The course also includes a study of the design and implementation criteria relevant to construction of walls, ceilings, staircases, flooring, insulation and finishing material. Students will be provided with of practical application on vertical and horizontal installation models. (In bearing wall system)

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / اللغة الانكليزية – دون المتوسط

## **UoM 212 English Language Pre-Intermediate**

This course is for Pre-Intermediate level students who want to communicate in English, and develop advanced speaking, reading, writing paragraphs, and listening skills.

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / الميكانيك الهندسي

### **STR 217 Mechanical Engineering**

Credit hours	:	2
Course type	:	Required (R)
E-Class (Code)	:	Google Classroom (g6jhzpy)
Instructor	:	Dr. Mohammed Shakib Al Jawahery
Instructor E-mail	:	Mohammed.aljawahery@uomosul.edu.iq
Pre-requisites	:	

#### **Catalog Description:**

This course is an introduction to learning and applying the principles required to solve engineering mechanics problems. Concepts will be applied in this course from previous courses you have taken in basic math and physics. The course addresses the modeling and analysis of static equilibrium problems with an emphasis on real-world engineering applications and problem-solving. Moreover the behavior of structural members under applied loads will be mentioned. Examples used in this unit cover a broad range of engineering applications in Civil engineering

#### **Reference Books:**

- Engineering Mechanics 14th by Hibbeler
- Vector Mechanics For Engineers Statics and Dynamics(12th)

#### Graduate outcomes (GOs) addressed by the course:

i	ii	iii	iv	V	vi	vii
~	✓				$\checkmark$	

#### **Course Learning Outcomes (CLOs)**

Students who successfully complete this unit will be able to:

- 1. Solving mechanic problems using principles of engineering (i).
- 2. Discern and determine the magnitude of loads acting on simple structural members(i).
- 3. Analyse rigid body equilibrium including(i).
- 4. Construct free body diagrams showing the function of simple structural elements(i).
- 5. Analyse the force(s) or moment(s) required to maintain a structure in equilibrium(i).
- 6. Analyse external reactions on structural members under applied loading(i).
- 7. Knowledge of different types of applied loading on a given structure(ii).
- 8. Understanding the distribution and the path of forces within a structure(vi).
- 9. Find center of gravity for a given body(i).
- 10. Find center of moment of inertia for a given body(i).

#### Weekly Teaching Plan:

Subject	Credit hours	No. of Weeks
Resultant of Force Systems.	2	1
Resultant of Concurrent Force Systems.	2	1
Moment of Force, Couple.	2	1
Resultant of Non-Concurrent Force Systems.	2	1
Equilibrium of Force Systems	2	1
Equations of Equilibrium of Concurrent Force Systems.	2	1
Free Body Diagram, Types of Supports, Types of Loadings.	2	1
Equations of Equilibrium of Non-Concurrent Force Systems.	2	1
Analysis of Trusses	2	1
Method of Joints.	2	1
Method of Section.	2	1
Centroids and Centers of Areas.	2	1
Centroids of Composite Figures.	2	1
Moments of inertia.	2	1
Moments of Inertia of Composite Figures.	2	1
Total	30	15

#### **Grading Policy:**

3 quizzes	10 pts
2 Homework	10 pts
Term Exam	20 pts
Final Exam	60pts
Total	100pts

#### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / المساحة

#### SUR 218 Survey

The course gives fundamentals of plane surveying and an introduction to mapping science for architects. Topics covered include leveling, together with its field procedure and applications, computation of areas and earth volumes. Computation and determination of point coordinates are also covered through studying methods for horizontal distance measurement, traversing, including its theory, applications, and adjustment. An introduction to photogrammetry is also included. In addition, the course sheds some light on computer aided surveying techniques.

#### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / مبادء الاحصاء وتطبيقاته

#### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / الظل والمنظور

## ARC 223 Shadows & Perspectives

The course introduces students to the fundamental principles of architectural drawings of both perspective and shadows. the student learns the techniques of drawing perspectives, such as general method, measuring point method, interior perspective. Also the students learn the techniques of shade & shadows on plans, elevations, isometric, exterior perspectives, and interior perspectives.

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / تاريخ عمارة اوربية

#### ARC 224 History of European Architecture

Inform students about the development of European Architecture from pre-Roman age until Renaissance and Baroque. Enhance the concept of architectural interactions between European civilizations and others, especially with Arabic-Islamic civilizations. Analyzing historical examples according to architectural theories of Design. Free-hand architectural drawings analysis

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المادة الدراسية المرحلة الثانية / الرسم بمساعدة الحاسوب 2

## ARC 225 Computer Aid Drawing (2)

The course is concerned with applying the latest techniques used in computer aided architectural presentation by learning about drawing and rendering techniques by

using 3d Max and Corona render software to reach a computer aided architectural presentation that is as close to realism as possible. In addition to getting acquainted with the most important techniques to assist in architectural presentation through the use of Adobe Photoshop software. The course develops students' design skills and creative thinking through design and formal alternatives that students learn about during work, as well as the architectural presentation of various projects and in various environmental conditions.

#### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / تركيب مباني (2)

#### ARC 226 Buildings Constructions (2)

This course initially the basic principles of construction elements constituting architectural spaces and other associate systems common to construction. It introduces students to the various construction phases from concrete foundation to finishing. The course also includes a study of the design and implementation criteria relevant to construction of walls, ceilings, staircases, flooring, insulation and finishing material.

#### **ARC 227 Housing Principles**

Definitions & Discussion of Housing Need, Human Demand, Housings Standards & types. Definitions & Discussion of Components of Residential urban fabric with their Comprehensive View & philosophy. As a requirement, student should present a report about one of main housing topics during the course.

#### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / مقاومة المواد

#### **STR 227 Strength of Materials**

Credit hours	:	3.
Course type	:	Required (R).
E-Class (Code)	:	Google Classroom (2fmka3x).
Instructor	:	Tuqa Waleed Ahmed.
Instructor E-mail	:	new.matrix242@uomosul.edu.iq
Pre-requisites	:	Engineering mechanics - Statics (ARC 244).

#### **Catalog Description:**

This course provides the basic knowledge in materials behavior, stress-strain relations and their analysis. During the course, students will review the engineering mechanics first and get knowledge in stress-strain relations and their types. Also the students will have basic concept on theory of flexure and deflection of beams.

#### **Reference Books:**

- F. L. Singer and A. Pytel, Strength of materials, 3rd edition, 1980.
- Pytel and J. Kiusalaas, Mechanics of Materials, 2nd edition ,2012, Library of Congress.

#### Graduate Outcomes (GOs) addressed by the course:

i	ii	iii	iv	V	vi	vii
$\checkmark$	$\checkmark$					

#### Course Outcomes (CLOs)

On successful completion of this course students will be able to:

- Analyze the behavior of structures under mechanical loads by free body diagrams.(i)
- Recognize physical phenomenon in the context of strength of materials.(i)
- Apply stress-strain relations in conjunction with elasticity and material properties to analyze and design the engineering problems.(ii)
- Identifying the relationships between loads, member forces and deformations.(i)
- Designing simple bars for allowable stresses and loads.(ii)
- Apply structural mechanics of deformable bodies to solve engineering problems.(i)

#### Weekly Teaching Plan:

Subject	Credit hours	No. of Weeks
Introduction to Strength of Materials.	3	1
Simple Stresses.	3	1

Axial Stress, Shearing Stresses.	3	1
Bearing Stresses.	3	1
Simple Strain	3	1
Stress-Strain diagram and Hook's Low.	6	2
Shear and Moment in beam.	3	1
Shear force diagram, bending moment diagram.	6	2
Stresses in beams	3	1
Flexural Formula	3	1
Maximum bending stresses	3	1
Deflection of beams	6	2
Total	45	15

## **Grading Policy:**

2 quizzes	10 pts
2 homeworks	5 pts
Term Exam	25 pts
Final Exam	60 pts
Total	100 pts

#### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / مختبر فحص المواد

#### STR 222 Materials Test Laboratory

This course deals with the composition, specifications, and uses of construction materials. This study supports by experimental tests of building materials Mechanical Properties of construction materials, including composition, specification, and experimental test of building materials.

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / الفنون الاسلامية

#### ARC 228 Islamic Arts (Elective)

Art is a language used by man to express what is in his essential self. There is a set of intellectual principles in the Islamic faith that accommodate the principles of Islamic arts. And this was evident in the design and creation of a collection of architectural and sculptural masterpieces. Art appeared in the Islamic world, providing a stylistic unity. It was the use of a common style of writing, decoration, engineering and wall decorations.

#### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المرحلة الثانية / العمارة والعلوم الإسلامية

## ARC 229 Architecture & Human Science (Elective)

The course introduces students to the fundamental principles of architecture and human sciences. The subject aims are defined theoretical links to architecture and the humanities, human values and the specificity of the architectural product, the nature of the interaction between humans and the place, philosophy of beauty and its relationship to human emotion in architecture. #### Expected learning outcomes of the program

#### Knowledge

A1- The basic, applied and engineering science principles necessary to provide architecture specialization, such as mathematics, stereotyping, physics, engineering drawing, statistics, computer techniques and automation.

A2. Specialized architecture sciences cover various aspects of architectural design, implementation, construction, executive drawings, architectural and free drawing, as well as interior design, outdoor space design, urban design, and city planning. Architecture is concerned with many aspects and interacts with many sciences and contributes to important applications in everyday life.

**A3**. Professional objectives and supporting foundations: Supporting skills include application within theoretical frameworks, such as reporting and research, as well as knowledge of economic, legal, health, social and security determinants.

#### Skills

**1b.** Design skills: Capability to create innovative and sustainable architectural designs, including interior design and design of outdoor and urban spaces.

**2b.** Research and analysis skills: developing research and information collection and analysis skills for application in design projects, including environmental, economic, and social considerations.

**3.b.** Communication and collaboration skills: Enhance effective communication and teamwork skills with classmates and specialists in multiple areas, including writing reports and presenting ideas clearly and convincingly.

Ethics

C1 Creativity and Innovation: Enhancing the values of creativity and innovation in the design and research process, contributing to the development of innovative and sustainable architectural solutions.

C2 Social and environmental responsibility: Promote awareness of the architect's social and environmental responsibility and ensure the application of sustainable development principles in design and construction projects.

Course Title: Principles of Geometric design Course Number/Type: ENGE337/Core Credit Hours: 2 (2 lecture hours/week) Level/Term: 3<sup>rd</sup> level /Fall

**Course Description:** 

A Core course in which the student learns the basic principles of engineering design in general, design principles, and the steps and stages through which engineering products are designed in all disciplines. In this course, the student learns the design thinking process to produce engineering designs that meet the design needs according to engineering standards and codes and a sequential design system. The student is introduced to the basic elements of engineering design, which represent the focus of the course, in addition to the stages of engineering design and global design. The course also contains some principles related to the design process, such as creativity, engineering codes, and design for all. This course is considered one of the courses related to engineering sciences and is essential for developing capabilities in how to start engineering design and how to harmonize between standards and design and functional requirements, customer requirements and the need for design. Course Title: Architectural design 5 Course Number/Type: ARC 341/Core Credit Hours: 5 (1 theory 8 practical) Level/Term: 3<sup>rd</sup> level /Fall

Course Description:

Design of a Multi-Family Housing Complex in Mosul City

The course initially introduces the basics of architectural design for a multi-family multi-storey housing complex.

Objectives:

To make students of architecture familiar with principles and concepts of planning taking into consideration the importance of planning process and the role of architect within this process. Students should be able to deal with urban planning process and its elements including street and parking design and master plans besides introducing many world-wide experiments within this subject.

• Systematic introduction to issues related with the design of human habitat, its components and space standards. The objective of the studio will be on understanding residential spaces in both the urban and traditional contexts.

• To train students for undertaking design of multi-story buildings, frame structure, considering site planning, structures, services, etc.

• Study architecture prevalent in Iraq (Mosul city) and its local character and characteristic elements of design.

• Green: Demonstration of world-leading sustainability principles

• Global: Understanding of and interprets the past, present and future of the city, iconic, defining the identity and character of different Neighborhoods on Mosul City, demonstration of excellence in all aspects of planning, design, contemporary, inspired and inventive, and expressive of its time and place, poetic and thought-provoking.

• Responsiveness: Welcoming, open and inclusive, integrated and harmonious, visually connected with, and open to, its immediate surroundings, responsive to the site, the wider context, the social needs of the families and whole community.

# نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM (1) المستوى الثالث / خدمات المباني (1)

Course Title: Building services 1 Course Number/Type: ARC 343 Credit Hours: 2 theoretical hours/week

Course Description:

The course is parted into five sections. Each section addresses a certain part of plumbing. The first section lunges the scope of plumbing and plumbing equipment. The second section subjects water supply system. Water supply is the provision of water by public utilities commercial organizations, community endeavors or by individuals, usually via a system of pumps and pipes. A water supply system: Water storage facilities such as reservoirs, water tanks, or water towers. Smaller water systems may store the water in cisterns or pressure vessels. Tall buildings may also need to store water locally in pressure vessels in order for the water to reach the upper floors. A pipe network for distribution of water to the consumers, which may be private houses, and other usage points. The third section addresses the types of plumbing pipes. Plumbing uses different types of pipes. Each type of pipes has essential usage according to its specific characteristics. Besides, Plumbing uses types of valves, tanks, and other apparatuses to convey fluids. The fourth section explains sewage or domestic wastewater. Connections to the sewers, underground pipes, are generally found downstream of the water consumers, but the sewer system is considered to be a separate system, rather than part of the water supply system. Sanitary sewer is an underground carriage system specifically for transporting sewage from house through pipes to treatment facilities or disposal. Sanitary sewers are part of an overall system called a sewage system or sewerage. Separate sanitary sewer systems are designed to transport sewage alone.

Refernces:

1- Plumbing Complete: Expert Advice from Start to Finish, Book by Rex Cauldwell.

2- Ultimate Guide: Plumbing, Updated 5th Edition, Book

Course Details:

This course delivers an essential knowledge to students in a certain specialize in engineering field. Plumbing is any system that conveys fluids for a wide range of applications. It involves installing and maintaining pipes that carry: water and sewerage. Hence, there are many attributable goals that are aimed to fulfill as mentioned below:

1.Studying plumbing provides the student with the efficient knowledge to be partially enough qualified in building engineering services

2. Technically, studying plumbing introduces students to plumbing facilities especially domestic plumbing.

3. This course promotes skills solving problems in students.

4. This course provides the students with examples and homework that give a glance at practical skills and technical equipment.

5.Since the majority of plumbing work is carried out on new domestic, commercial and retail constructions, it is considered great career with lots of job prospects. It provide an opportunity for a successful job for those who want to become self-employed.

Subject	Week
Introduction: the scope of plumbing	1
Plumbing equipment and plumbing fixture	2
Water supply system:	3
1. General water distribution network	
2. Conditions of designing general water distribution network	
Types of general water distribution network	4
Water supply system:	4
<ol> <li>Steps of accomplish the water supply system</li> <li>Types of water distribution network</li> </ol>	
3. Types of water tanks	
Conditions of tanks	
Water supply system:	5
1. Calculations of water demands in a building.	
2. Determining pipe size	
Calculating the average of water usage in a building.	
Water supply system:	6
<ol> <li>Design the water distribution network in buildings</li> <li>Using traditional pipes and methods</li> </ol>	
Using PEX system	
Types of plumbing pipes:	7
1. types of supply water pipes	,
2. Accessories of supply water system	
3. Types of valves and their implementations.	
4. Types of equipment that used in fixing plumping system.	
Seminar Reports Submission and Presentation	
Sewage or domestic wastewater:	8
1. Components of sewage system	
2. Types of sewage systems in a building: One Pipe System	
3. Types of sewage systems in a building: Two Pipe System Seminars Presentation	
Sewage or domestic wastewater:	9
1. Steps of accomplish the sewage systems in a building.	
2. Testing the sewage systems in a building.	
3. Calculating the sizes and length of sewage pipes.	
Seminars Presentation	
Storm-water and the drain system:	10
1. Types of roof drainage systems	
2. Rainwater harvesting system in a building.	
The garbage disposal system: 1. Types of garbage.	
Systems of garbage disposal in a building.	
Seminars Presentation	11
C.W.: Drawing water supply system and sewage for house plane.	12

# نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM (1) المستوى الثالث / الخرسانة المسلحة (1)

Credit hours	:	2
Course type	:	Required (R)
E-Class (Code)	:	Google Classroom (r3k6f6b)
Instructor	:	Dr. Mohammed Shakib al Jawahery
Instructor E-mail	:	Mohammed.aljawahery@uomosul.edu.iq
Pre-requisites	:	

#### **Catalog Description:**

Analysis and Design of rectangular beams subjected to flexural bending and Shear design for beams moreover, Design and analysis of Short Columns Subject to Axial Load and Bending.

#### **Reference Books:**

- Darwin, David, Charles William Dolan, and Arthur H. Nilson.Design of concrete structures. New York, NY, USA:: McGraw-Hill Education, 2020.
- Hassoun, M. Nadim, and AkthemAl-Manaseer.Structural concrete: theory and design. John wiley& sons, 2020.
- Aghayere, A. O., Limbrunner, George F. (2014) "DESIGN OF REINFORCED CONCRETE"8th ed. Library of Congress, USA.

#### Graduate outcomes (GOs) addressed by the course:

i	ii	iii	iv	V	vi	vii
$\checkmark$	✓				✓	✓

#### **Course Learning Outcomes (CLOs)**

On successful completion of this course, students will be able to:

- 11. Recognize the design philosophy of reinforced concrete structure (i, ii).
- 12. Understand the difference between the structural behavior of different reinforced concrete structural elements through demonstration experiments and data analysis (i).
- 13. Be able to analyze reinforced concrete structural systems under gravity and lateral Loads (i).
- 14. Be able to design different elements of reinforced concrete structural systems subjected to gravity and lateral loads (i, ii, vi).

- 15. Be able to analyze and design a complete structural system through a comprehensive design project (ii, vi).
- 16. Be able to produce a complete project document and present in a concise and complete manner to include structural drawings and structural calculations(vi, vii).

#### Weekly Teaching Plan:

Subject	Credit hours	No. of Weeks
Introduction to Reinforced Concrete	2	1
Flexural Analysis of Beams (working stress method)	2	1
Flexural Analysis of Beams (working stress method)	2	1
Flexural Analysis of Beams (Ultimate) According to ACI Code	2	1
Flexural Analysis of Beams (Ultimate) According to ACI Code	2	1
Analysis and Design of Doubly Reinforced Beams	2	1
Analysis and Design of Doubly Reinforced Beams	2	1
Analysis and Design of T Beams and Doubly Reinforced Beams	2	1
Analysis and Design of T Beams and Doubly Reinforced Beams	2	1
Shear Stresses in Concrete Beams; Design for Shear	2	1
Shear Stresses in Concrete Beams; Design for Shear	2	1
Columns	2	1
Design of Short Columns Subject to Axial Load and Bending	2	1
Design and Analysis of Eccentrically Loaded Columns Using Interaction Diagrams	2	1
Design and Analysis of Eccentrically Loaded Columns Using Interaction Diagrams	2	1
Total	30	15

### **Grading Policy:**

3 quizzes	10 pts
2 Homework	10 pts
Term Exam	20 pts
Final Exam	60pts
Total	100pts

# نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / مبادئ التخطيط

#### Course Title: Principle of Planning Course Number/Type: ARC345/Core Credit Hours: 2 (2 lecture and 0 laboratory hours/week) Level/Term: 3<sup>rd</sup> level / Fall

Course Description:

The course initially introduces the principles of planning concerning on urban planning as the level that most connected to architecture with focusing on site elements and evolution of human settlements.

Week

Refernces:

1. Gallin, Arthur B., The Urban Pattern, Van Nostrand Reinhold Co.

2. Aldewachi, Momtaz, Introduction to Urban Planning, Cihan University.

3. Chapin, F. Stewart, Urban Land use Planning, University of Illinois

4. Mortada, Hisham, ,Traditional Islamic Principles of Built Environment,

Routledge Curzon .

Course Details:

Subject

Introduction and Basic Definitions.

Introduction and Basic Definitions.	1
The Emergence of Human Settlements in Ancient Civilizations.	2
Medieval Towns, The Islamic City.	3
Modern Theories and Ideas of Urban Planning.	4
Contemporary and Sustainable Cities.	5
Elements of Urban Areas/ Streets.	6
Technical Aspects of Streets' Planning.	7
Technical Aspects of Walk Ways' Planning.	8
Technical Aspects of Car Parking's Planning.	9
Urban Land Use Patterns, The Residential Use.	10
Urban Land use Patterns, The Commercial and Industrial Use.	11
Open Spaces and Water Fronts.	12
The Master Plans with Review of Iraqi Experiment.	13
Introduction to Urban Renewal.	14
The Iraqi Experiment of Urban Renewal.	15

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / تقنيات الاظهار المعماري بالحاسوب

#### Course Title: Computer Aided Architectural Presentation Course Number/Type: ARC 346/Core Credit Hours: 2 (1 lecture and 2 laboratory hours/week)

Course Description:

The course is concerned with applying the latest techniques used in computer aided architectural presentation by learning about drawing and rendering techniques by using 3d Max and Corona render software to reach a computer aided architectural presentation that is as close to realism as possible. In addition to getting acquainted with the most important techniques to assist in architectural presentation through the use of Adobe Photoshop software.

The course develops students' design skills and creative thinking through design and formal alternatives that students learn about during work, as well as the architectural presentation of various projects and in various environmental conditions.

Refernces:

1- A Fascinating journey into the world of 3D Graphics with 3ds Max. By Iftikhar Abbasov

2- Autodesk 3D Max Design- The Designer's Handbook. By Marcello Femi, AIA

**3-** Corona Render 1.3. By Giao Trinh

Course Details:	
Subject	Week
Introducing the 3ds Max program and the program's drawing board, adjusting the basic settings, in addition to getting to know the main menus in the program.	1
Learn the basic commands and commands used in 3ds Max.	2
Learn how to dra two dimensional geometric shapes and Edit spline applications.	3
Learn how to creat advanced and 3D architectural models.	4
Edit poly applications.	5
Ready-made models used in architectural and construction works AEC Extended.	6
Get to know the modifiesr list and the most important modifiers used.	7
Presenting an exterior design project using instructions, orders and rates.	8
Learn about Corona render software and how to install it in 3ds Max.	9
Adjust Corona render settings.	10
Recognize the types and forms of Corona light and how to choose, adjust and define the appropriate lighting to control it.	11
Learn how to put cameras and Corona camera, how to adjust the main setting for them, and how to choose the appropriate shot.	12
1 Learn how to add Corona material and their types using the Material editor and how adjust them, in addition to getting to know the Corona material library, in addition to the method of manufacturing different materials.	13

The way to insert the different blocks within the 3ds Max program and the way to insert them with their own material, in addition to identifying the most important sites from which the different blocks can be obtained. Post production using Adobe	14
Photoshop software program and adding different backrounds and environmental	
effects.	
Presenting a presentation for an exterior and interior design project using Corona	15
render.	

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / اللغة الانكليزية- المتوسط

Course Title: English Language - Intermediate Course Number/Type: / Core Credit Hours: 2 theoretical hours/week Level/Term: 3<sup>rd</sup> level / Spring Prerequisties: -

Course Description:

First of all, Headway's trusted methodology combines solid grammar and practice, vocabulary development, and integrated skills with communicative role-plays and personalization. It is a perfectly-balanced syllabus, and packed with new material. It builds student confidence and enhances fluency in speaking. Authentic material from a variety of sources enables students to see new language in context, and a range of comprehension tasks, language and vocabulary exercises, and extension activities practise the four skills that support the four skills of language learning: listening, reading, writing and speaking. The curriculum provides two important parts of learning the English language: the first is the 'Everyday English' and the second part is 'Spoken grammar' sections practise real-world speaking skills. The curriculum also provides detailed information about the grammar of the language and how to write it, which is mentioned in each unit in the book units mentioned independently at the end of the book to provide models for students to analyze and imitate.

Refernces:

 Liz and John Soars (2012) New Headway Intermediate Student's Book Fourth Edition. OXFORD University Press. ISBN-13 : 978-0194770200

Course Details:

The New Headway book's curriculum includes a range of topics and Up-to-date material with global appeal. style. The curriculum integrates a balanced syllabus that supports the four skills of listening, reading, writing and speaking. The curriculum followed an integrative approach that provides linguistic information, grammatical and vocabulary. The curriculum emphasizes on to parts of learning English Language: firstly, 'Everyday English', and secondly, 'Spoken grammar'. Accordingly, the curriculum focused on formal linguistic rules, methods of writing and formulating them, tenses of verbs and their uses, auxiliary verbs, compound sentences, interrogative sentences, tools for affirmation, affirmation and negation sentences. The curriculum also focused on the daily language spoken by the general public in daily life, which included talking about general information, personal preferences, expressing opinion, advice, support and rejection ... ect. Besides, the curriculunm emphyzises on the way the sentences are pronounced in the English Music tone. In addition, the curriculum included articles to develop reading skills by understanding the general context with related questions about the articale. Besides, this course includes New - iTutor DVD-ROM included in Student Book for interactive home study. Moreovere, New - iChecker CD-ROM included in Workbook for workbook audio, self-tests, and links to online tests and practice. .

Subject	١
Unit 1: A world of difference / Present, past, present perfect tenses / Auxiliary verbs	Τ

Week

1

/ Questions and negatives / Short answers /Sounding polite	
Unite 2: The working week /Present and continuous tenses /State verbs /Passive / How often	2
Unit 3: Good time, bed / Past tenses	3
Unit 4: Getting it right / Modal and related verbs	4
.Unit 5: Our Changing world / Future forms / Future possibilities	5
Unit 6: What matters to me / Information questions	6
Unit 7: Passions and fashions / Present perfect / Passive / Adverbs /Time expressions	7
Unit 8: No fear / Verb patterns / The infinitive / The reduced infinitive	8
Unit 9: It depends how you look at it / Conditionals / Might have done/ could have done / Should have done	9
Unit 10: All things high tech / Noun phrases / Possessives / Reflexive pronouns and each other	10
Unit 11: Seeing is believing / Present and past / Modals of probability /Looks like / looks /Expressing disbelief	11
Unit 12: Telling it how it is / Reported Speech / Reported thoughts /Reported questions	12
Listening and Reading	13
Listening and Reading	14
Listening and Reading	15

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / التصميم المعماري(6)

#### Course Title: Architectural design 6 Course Number/Type: ARC 341/Core Credit Hours: 5 (1 theory 8 practical) Level/Term: 3<sup>rd</sup> Level/ Spring Prerequisties: architectural design 5

Course Description:

The course initially introduces the basics of architectural design for a building within community or sector centre level .

Objectives:

To introduce concepts of function, structure in design process through projects (secondary school, shopping center and clcture center) and to learn how to a apply design methodology for those complicated projects

Understanding of the basic architectural principles in the design of buildings, interior spaces, and sites. Understanding of the fundamentals of visual perception and the principles and systems of order that inform two- and three-dimensional design

Understanding of the natural and built site characteristics in the development of a program and the design of a project. Understanding of the basic principles and appropriate application and performance of building functions and construction

Refernces:

1. Joseph De Chiara, Julius Panero, Time-Saver Standards for Housing and Residential Development

2. Polservice, 1982 Housing Technical Standards & Codes of Practice

	Week
Introduction buildings within community or sector centre	1
Analysis of similar examples	2
Site analysis	3
Design concept and primary idea formulation	4
Discussion	5
Discussion	6
First submission	7
Details of plans	8
Elevations and visual aspect	9
Details	10
Pre- Final submission	11
Discussion	12

Discussion	13
Final presentation settings	14
Final submission	15

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / تاريخ العمارة (2)

#### Course Title: History of Architecture (2) Course Number/Type: ARC348/Core Credit Hours: 2 (2 theory hours lecture /week)

Course Description:

- Inform students about the development of European Architecture from pre-Roman age until Renaissance and Baroque.

- Enhance the concept of architectural interactions between European civilizations and others, specially with Arabic-Islamic civilizations.

- Analysing historical examples according to architectural theories of Design.

- Free-hand architectural drawings analysis

Refernces:

Fletcher, Banister, *A History of Architecture on the Comparative Method*, R.I.B.A. London Mansbridge, John, *Graphic History of Architecture*, B.T. Bastsofrd Ltd., London, 1967.

Course Details:	
Subject	Week
Introduction to the history of European Architecture	1
Greek Architecture: Architectural characters & Orders	2
Greek Architecture: Temples	3
Roman Architecture: Architectural characters	4
Roman Architecture: Temples & Pantheon	5
Roman Architecture: Other Building types	6
Interaction between Roman and Eastern Architecture	7
Early Christian Architecture	8
Byzantine Architecture	9
Romanesque Architecture:	10
Mid Term Exam	11
Gothic Architecture:	12
Early Renaissance Architecture	13
High Renaissance Architecture	14
Baroque Architecture	15

# نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM

المستوى الثالث / الخرسانة المسلحة (2)

#### Course Title: Reinforced Concrete (2) Course Number/Type: ARC 349/Core Credit Hours: 2 (1 lecture and 2 laboratory hours/week) Level/Term: 3<sup>rd</sup> level / Spring

Course Description:

An introduction to the reinforced concrete structure, Characteristics of reinforced concrete elements, concrete and reinforcing steel Grades, Loading types and load combinations. Analysis and design of different structural elements subjected to flexure and shear using load and resistance factor design method (LRFD). Analysis and design of continuous one-way slabs and beams using the ACI coefficients method. Analysis and design of two-way slabs using coefficients method. Analysis and design of wall and spread footings. The above topics will be covered according to the American Building Code Requirements.

Refernces:

No textbook is required for this course. The given lectures will cover the required subjects. In addition to the lectures, the student can make use of the following references:

Design of Concrete Structures by Nilson, Darwin, and Dolan.

- 1. Reinforced concrete Mechanics and Design 6th Edition by Wight and MacGregor.
- 2. Design of Reinforced Concrete, Jack McCormac and Russell Brown.
- 3. ACI-318-14M, Building Code Requirements 2014, American Concrete Institute.
- 4. ASCE 7-10, Minimum Design Loads for Buildings and Other Structures.

Course	Details:	

Subject	Week
Introduction to concrete structures.	1
Loads on structures and design methodology.	2
Introduction to ASCE 7-10	3
Introduction to ACI 318	4
Introduction to ACI coefficient method for analysis of continuous one-way slabs and beams.	5
Analysis and design of continuous one-way slabs.	6
Analysis and design of continuous one-way slabs-Cont.	7
Analysis and design of continuous beams.	8
Analysis and design of continuous beams-Cont.	9
Introduction to analysis and design of two-way slabs using the ACI coefficient method.	10
Analysis and design of two-way slabs.	11
Analysis and design of two-way slabs-Cont.	12

Introduction to footings.	13
Analysis and design of wall footing.	14
Analysis and design of spread footing.	15

### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / خدمات المبانى(2)

#### Course Title: Building services 2 Course Number/Type: ARC 350/Core Credit Hours: theoretical: 2 huors weekly Level/Term: 3<sup>rd</sup> level / Spring

**Course Description:** 

Introduction to engineering services and why does the architects should learn and understand the engineering services .

Basic information about electricity power and how its generate , supply and distribution . Describes the electricity energy consumption calculations , electrical installations systems and types . presents types of various electrical systems in buildings .

Interior lighting design calculations concentrated on (lumen method), lighting fixtures, types and their affects on interior design, other lighting characteristics like types of Glare and method to avoid it, color temperature of lamps and its biological effects on humans and space, color rendering of lamps.

Describes some of light fixture types according to light direction and distribution.

Covers some of the remaining building services which in major touch with architectural design (fire detection and alarm system, conveying systems including elevators, escalators and their types and design requirements).

Refernces:

1 - التأسيسات الكهربائية ، د. مظفر النعمة ، د. سنان عطار باشي 1982

2 - هندسة الخدمات الكهربائية المعمارية ، د. مظفر النعمة 2012

3 - تصميم الانارة العربي ، عزت بارودي 2008

4- Environment and Services By Peter Burberry Dip Arch, Msc, RIBA, FCIOB, London, Basford Limited, 1986.

5- Architectural Lighting Design, a practical guide,

Admire Jukanovic 2018

6- Building Control Systems, Vaughn Bradshaw

Subject	Week
Introduction to Building services	1
Electricity energy consumption calculation	2
Electricity load distribution in buildings + Electricity installation systems	3
Lighting design ( lumen method)	4
Interior lighting design (1)	5
Interior lighting design (2)	6
Interior lighting design (3)	7
Exterior lighting design and Media architecture	8
Fire detection and Alarm system	9

Firefighting and suppression	10
Conveying systems ( Elevators)	11
Conveying systems ( Escalators )	12
Project of small house design ( working drawings of electricity installations )	13
Building systems integration	14
General preview and discussion	15

# نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / الرسوم التنفيذية (2)

Course Title: working drawing 2 Course Number/Type: ARC 351/Core Credit Hours: 4 laboratory hours/week) Level/Term: 3 <sup>rd</sup> level / Spring Prerequisites:	
Course Description:	
Introducing iron designs and how to deal with Steel sections of various types and in addition to teaching students how to form and shape Steel structures with r large areas and dealing with details related to the details, as well as identifying the of different architectural spaces designed from Steel sections.	relatively
Refernces:	
<ol> <li>- building construction vol. 3</li> <li>- building construction vol. 5</li> <li>- structure and fabric</li> <li>- working drawing handbook</li> <li>- Steel Structures Design</li> <li>- introduction to structural engineering</li> <li>- Design of Steel Structures</li> </ol>	
Course Details:	
Subject	Week
Structural comparison between the traditional structure and the unconventional structure in terms of the structural system of steel structures.	1
Explain the types of structural systems for steel structures.	2
Structural Steel system (a type of iron truss) with structural details specific to this type.	3
Steel structural system (type of cable or wire drawn) with structural details of this type.	4
Explanation of iron systems in general.	5
The first presentation: a detailed presentation of the general planning and at the level of the departments (plans, facades, and sections), and with architectural details.	6
Explanation of electrical plans in detail and for architectural horizontal plans.	7
practical test .	8
Modern methods of construction (shell building systems and suspended structural systems).	9
Discussions	10

Discussions	11
The second presentation: a detailed presentation of the method of prefabricated construction and the various construction systems (steel systems with their details).	12
Discussions	13
Discussions	14
Final presentation	15

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / المنطق ومنهجية التصميم

Course Title: Logic & Methodology of design Course Number/Type: ARC 352 /Core Credit Hours: 1 (1 lecture hours/week) Level/Term: 3<sup>rd</sup> level / semester 2 Prerequisties:

#### Course Description:

A core course through which the student learns the logic and methodology of design processes. Introducing the importance of logic and methodology in design in general is one of the topics that play an important role in the design process, clarifying the basic design principles, processes and factors involved in making the design, and their practical application in the design. In addition to in-depth information on design and thinking processes, inference and analysis, depending on the results to employ the correct methodology of design depending on the inputs and outputs of the project.

#### Refernces:

1- Methodology of architectural design

2- The psychological language of architecture

**3-** Rethinking Design and Interiors: Human Beings in the Built Environment

Subject	Week
Introduction to the course and its definition and some of its terms	1
What is design as a mental and logical process	2
What is thinking and how to apply it in design	3
The principle and mechanism of logical thinking	4
The design process	5
The needs and design	6
The Design process theories	7
Factors affecting the design process	8
The design methodology and method of thinking	9
Types of design methodologies	10
Logic and logical thinking	11
logic elements	12
Evaluation and development process	13
Analytics	14
Integrated steps of the design process	15

### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / تطبيقات التخطيط والاسكان

# نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM

المستوى الثالث / نظم التحكم البيئي

#### Course Title: Planning Application and Housing Course Number/Type: ARC361/Elective Credit Hours: 2 (1 lecture and 2 laboratory hours/week) Level/Term: 3<sup>rd</sup> level / Spring

Course Description:

The housing subject in the second semester aims at introducing the student to the concept of housing from the psychological, social, urban, economic and urban aspects, and looking at (the house or housing) as an urban unit within the urban fabric of the city as a whole, as well as looking at the housing sector as an economic sector that constitutes an essential and important part of the country's economies Its role is to address the housing deficit and its problems, and to raise its reality to the highest level in terms of construction and civilization.

Refernces:

1. Barker Review of Land Use Planning: Final Report - Recommendations, Norwich,

2. Brimly, 'Housing market models and planning', Town Planning Review

3. Chapin, F. Stewart, Urban Land use Planning, University of Illinois

4. Mortada, Hisham, ,Traditional Islamic Principles of Built Environment, Routledge Curzon .

Course Details:	
Subject	Week
Housing Basics: Definitions of Important Terms	1
Housing need and housing demand	2
Housing balance and housing deficit-	3
Types of housing standards and their descriptions	4
Population Densities: Definitions	5
Housing densities and their relationship to degrees of urbanization and urban	6
environments.	
Methods of controlling population densities	7
Housing policies and programs	8
The housing market and the factors of active market forces in it	9
The importance of the financing policy in the field of housing	10
Components of the residential urban fabric: characterization & analysis.	11
Movement networks and urban spaces network.	12
The Master Plans	13

The Master Plans with Review of Iraqi Experiment.	14
The Master Plans with Review of Arabic Experiment.	15

#### نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الثالث / التشريعات العمر إنية

Course Title: Environmental Control Systems Course Number/Type: ARC 362/ Elective Credit Hours: 2 (2 lecture hours/week) Level/Term: 3<sup>rd</sup> level /Fall Prerequisties:

**Course Description:** 

Course is concerned with studying the environmental aspects in terms of climate, the use of new and renewable energy sources such as the sun and wind, in addition to the use of plants and environmentally friendly building materials, the optimal exploitation of the surrounding environment, and identification of strategies for environmental control systems, Passive Control System, in terms of cooling, heating, ventilation, thermal mass and evaporative cooling, which provide the maximum Thermal comfort and safety for designing buildings in a manner that respects the environment, in addition to demonstrating the role of environmental control in rationalizing energy consumption, minimizing negative environmental impacts, and providing an environmentally friendly indoor environment, through which it is possible to achieve sustainable, environmentally friendly buildings.

The climate consultant program will also be used for the purpose of understanding the local climate of the area in which any project is located when analyzing the site, identifying climatic analyzes for different regions, and identifying the most important strategies and environmental control systems that can be relied upon in designing buildings in different climatic zones.

Refernces:

- 1- The green studio handbook, Environmental Strateries for Schematic Design. By Alison G. Kwok and Walter Grondzik, 2018.
- 2- Heating, Cooling, Lighting Sustainable Design Mwthods for Architects by Norbert Lechner, 2009.

Subject	Week
An introduction to environmental control systems and the most important	1
determinants that must be studied when designing buildings, starting with the the	
site design strategies.	
Learn about the international green building rating systems.	2
Environmental analysis by using Climate consultant program.	3
Insulating materials as environmental control system.	4
Green walls/ Facades as environmental control system.	5
Green roofs as environmental control system.	6
Double skin walls and dynamic facades as environmental control system.	7
Glazing technology as environmental control system.	8

Lighting as environmental control system.	9
Shading devices as environmental control system.	10
Energy production strategies as environmental control system.	11
Natural ventelation using the wind and gravity as environmental control system.	12
Passive solar heating strategies as environmental control system.	13
Passive cooling strategies as environmental control system.	14
Use water and recycling waste strategies as environmental control system.	15

# Expected learning outcomes of the program

#### Knowledge

A1- The basic, applied and engineering science principles necessary to provide architecture specialization, such as mathematics, stereotyping, physics, engineering drawing, statistics, computer techniques and automation.

A2. Specialized architecture sciences cover various aspects of architectural design, implementation, construction, executive drawings, architectural and free drawing, as well as interior design, outdoor space design, urban design, and city planning. Architecture is concerned with many aspects and interacts with many sciences and contributes to important applications in everyday life.

A3. Professional objectives and supporting foundations: Supporting skills include application within theoretical frameworks, such as reporting and research, as well as knowledge of economic, legal, health, social and security determinants.

#### Skills

**1b.** Design skills: Capability to create innovative and sustainable architectural designs, including interior design and design of outdoor and urban spaces.

**2b.** Research and analysis skills: developing research and information collection and analysis skills for application in design projects, including environmental, economic, and social considerations.

**3.b.** Communication and collaboration skills: Enhance effective communication and teamwork skills with classmates and specialists in multiple areas, including writing reports and presenting ideas clearly and convincingly.

Ethics

C1 Creativity and Innovation: Enhancing the values of creativity and innovation in the design and research process, contributing to the development of innovative and sustainable architectural solutions.

C2 Social and environmental responsibility: Promote awareness of the architect's social and environmental responsibility and ensure the application of sustainable development principles in design and construction projects.

Pre-requisites	:	

#### **Catalog Description:**

First of all, Headway's trusted methodology combines solid grammar and practice, vocabulary development, and integrated skills with communicative role-plays and personalization. The curriculum followed an integrative approach that provides linguistic information, grammatical and vocabulary. The curriculum integrates a balanced syllabus that supports the four skills of listening, reading, writing, and speaking. The New Headway book's curriculum includes a range of topics and up-to-date material with global appeal. It builds student confidence and enhances fluency in speaking. Authentic material from a variety of sources enables students to see new language in context, and a range of comprehension tasks, language and vocabulary exercises, and extension activities practice the four skills that support the four skills of language learning. The curriculum provides two important parts of learning the English language: the first is the 'Everyday English' and the second part is 'Spoken grammar' sections practice real-world speaking skills. The curriculum also provides detailed information about the grammar of the language and how to write it, which is mentioned in each unit in the book units mentioned independently at the end of the book to provide models for students to analyze and imitate. Accordingly, the curriculum focused on formal linguistic rules, methods of writing and formulating them, tenses of verbs and their uses, auxiliary verbs, compound sentences, interrogative sentences, tools for affirmation, affirmation and negation sentences. The curriculum also focused on the daily language spoken by the general public in daily life, which included talking about general information, personal preferences, expressing opinion, advice, support and rejection...ect. Besides, the curriculunm emphyzises on the way the sentences are pronounced in the English Music tone. In addition, the curriculum included articles to develop reading skills by understanding the general context with related questions about articles.

#### Catalog Description:

This course, in the design studio sequence, continues the development of a comprehensive building design process with problems of complex scope. The studio focuses on building types that exhibit complexity and challenge such as university academic buildings. Project of university college explored in this studio includes the synthesis of spatial, functional, and contextual concerns, as directly linked to the understanding and employment of building systems. In addition, emphasis is placed on building envelope in terms of form, massing, articulation and fenestration. The use of computer-aided drafting is a part of the design exploration and presentation.

#### Reference Books:

- 1- Joseph De Chiara, "Time-Saver Standards for Building Types".
- 2- Ernst Neufert ,"Neufert Architects' Data".

- 4- Katy Lee, "University Architecture".

#### Graduate outcomes (GOs) addressed by the course:

i	ii	iii	iv	V	vi	vii

#### Course Outcomes (CLOs)

On successful completion of this course students will be able to:

- Ability to gather, analyze, assess, record, apply, and comparatively evaluate relevant information within architectural coursework and design processes.
- Using creativity, conceptual skills, and judgment to identify human and environmental needs and to meet or express them in space and form.

- Demonstrate an understanding of principles and practices and integrate and apply that knowledge within architectural coursework and design processes.
- Ability to raise clear and precise questions, use abstract ideas to interpret information, consider diverse points of view, reach well-reasoned conclusions, and test alternative outcomes against relevant criteria and standards.
- Critical understanding of the theory and practice of environment and energy issues in the cultural context of society as a whole
- Ability to develop imaginative and creative thinking within architectural coursework and design processes.

Subject	Credit hours	No. of Weeks
Introduction to College designs: types, functions, and characteristics. Data collection: Precedents Analysis of previous Colleges and Universities projects to highlight a handful of design issues: such as, functional zoning, plan circulation diagrams, systems integration ideas, structural concepts, elevation design, section-volume concepts, and so on.	9	1
Data collection of Design standards and criteria of educational building designs.	9	1
Site analysis	5	0.5
Day Sketch-1	4	0.5
Discussion of proposals of design concept	18	2
First submission of Design concept	4	0.5
Design concept development	9	1
Development of plans (zoning & circulation)	18	2
Development of plans (building structure)	9	1
Second submission: plans and physical model	5	0.5
Development of elevations & sections	18	2
Day Sketch-2	4	0.5
Pre-final submission	5	0.5
Solving minor problems: functional, formal & structural	18	2
Final submission	9	1
Total	135	15

#### Weekly Teaching Plan:

Grading Policy:		
Day sketch	30 pts	
Precedent analysis reports	4 pts	
Functional analysis reports	4 pts	
Site analysis reports	2 pts	
Design project – concept submission	8 pts	
Design project – plan submission	15 pts	

Design project – prefinal submission	15 pts	
Design project – final submission	22 pts	
Total	100pts

## نموذج وصف المادة الدراسية MODULE DESCRIPTION FORM المستوى الرابع / نظرية العمارة

Credit hours	:	3
Course type	:	Required (R)
E-Class (Code)	:	Google Classroom (bbmcgi6)
Instructor	:	Dr. Asma Al-Dabbagh
Instructor E-mail	:	asma.dabbagh@uomosul.edu.iq
Pre-requisites	:	

#### **Catalog Description:**

The course includes a presentation of the theoretical framework of the main architectural movements and their secondary sub-divisions, over their change within the nineteenth and twentieth centuries, to contemporary architecture today. This framework includes the presentation of the thoughts of modernist architecture from its beginnings and development, with its changes according to the regions and architects who practiced it, as well as the architecture of late modernity, postmodern architecture, and deconstructive architecture. Classification of the important aspects of each architectural movement distinguishes them from others. Clarify the theoretical aspect of each architectural movement by enhancing it with examples.

#### **Reference Books:**

- Changing Ideals in Modern Architecture/ Peter Collins, 1965
- Modern Architecture since 1900/ William Curtis, 1982
- Architecture Today/ Charles Jencks, 1988
- The Modern Architectural Movements- International Style in Architecture/ Sherine Sherzad, 1999

#### Graduate outcomes (GOs) addressed by the course:

i	ii	iii	iv	v	vi	vii
~			~			

#### **Course Learning Outcomes (CLOs)**

On successful completion of this course, students will be able to:

- Recognize the main movements in architecture through the last three decades. (i)
- Describing and identifying the characteristic concerning the main movements and secondary approaches in Architecture. (i)
- Comparing the deferent architectural approaches in conceptual and formal characteristics. (i)
- Report the data obtained from the visit to implemented projects. (iv)

• Analyzing the modern projects considering the main topics in course. (iv)

## Weekly Teaching Plan:

Subject	Credit hours	No. of Weeks
Backgrounds of Modern Architecture, Revivalism, Eclecticism	3	1
The Beginning of Modern Architecture, Art Nouveau, De Stijl & Futurism	3	1
Constructivism, Expressionism, Organic Architecture/ Frank Lloyd Wright, The Chicago School of Architecture	6	2
Functionalism, Purism, New Objectivism & The Bauhaus School,	6	2
International Style, The Architecture of Le- Corbusier, The Architecture of Ludwig Mies	6	2
The deficiencies of Modern Architecture, Crises of Modern Architecture	3	1
The Architecture of Brutalism, Archigram & Metabolism	3	1
Late-Modern Movement	6	2
Post-Modern Movement	6	2
Late-Modern & Post-Modern spaces, Deconstruction	3	1

#### **Catalog Description:**

This course aims to teach students the basic principles of Islamic architectural, and Identify the general characteristics of Islamic architecture which associated with the religious aspect and the climatic side, In addition, knowledge of the properties associated with flexibility, formal adaptation, achieving ambiguity, unity, diversity, and others. This course also aims to introduce students to the different functional types of Islamic architecture, such as religious buildings such as mosques and schools, service buildings such as markets, khans, caravanserai, baths, bimaristans, residential buildings such as traditional Islamic house, palaces of rulers, Sufi buildings such as Al-Khanqah, Rabat, Zawiya, Al-Takiya, and funerary buildings such as the Mausoleum, Shrine, almshhd, and Water facilities buildings such as Al Sabil Building , Bridges, Water gauges.

Reference Books:

- 1. Islamic Architecture , John . D. Hoag
- 2. Islamic Architecture, Form, Function, and Meaning, Robert Hillenbrand.
- آلفن والعمارة الإسلامية (1250-1800) ، شيلا بلير، جوناثان بلوم
- العمارات العربية الإسلامية في العراق، الجزء الأول، عيسى سليمان وأخرون 4.
- موسوعة العمارة الإسلامية، عبد الرحيم غالب 5.
- تطوير عمارة المساجد، در اسة دور التكيف في تطوير مساجد القرن الاول الهجري، أحمد عبد الواحد ذنون. 6.
- معجم عمارة الشعوب الإسلامية، علي ثويني. 7.

#### Graduate outcomes (GOs) addressed by the course:

i	ii	iii	iv	V	vi	vii

#### Course Outcomes (CLOs)

On successful completion of this course students will be able to:

- Recognize the most important characteristics of Islamic architecture (i).
- ....Describing and Identifying the most important functional types in Islamic architecture, such as the mosque, the school, the palace, the khan, the bimaristan, and the bathroom. ( i ).
- Recognize the detailed components of each functional type in Islamic architecture.( i ) Comparing the characteristics of Islamic architecture and Western architecture
- Analyzing the important characteristics in most functional types of Islamic architecture( iv )

- Analyzing of contemporary design projects that include characteristics of Islamic architecture ( iv )
- report of the data about the contemporary design projects that include characteristics of Islamic architecture ( iv )

Weekly	Teaching	Plan:
v v centry	I Cuching	

Subject	Credit hours	No. of Weeks
Definition of Islamic architecture , factors of origin and composition (natural and Cultural factors)	2	1
First Religious buildings (Mosque, School) The main components of the mosque building: (Al-Musalla (Prayer House), mihrab, alminbar, The Courtyard, The wall, minaret). The minor components of the mosque The main types of mosques: Arabic type mosques, Iwan mosques, Ottoman type mosques	6	3
Schools, Architectural features of the school Famous examples of Islamic schools	2	1
Second: Service buildings (markets, khans, the Crown Saray, bathrooms, and bimaristans) -Markets, markets definition, markets location -Alkanat, the definition of the khan, its architectural characteristics -Al-Crown Saray ,its definition, , its architectural characteristics -Bathrooms , its definition, , its architectural characteristics -Bimaristans, its definition, , its architectural characteristics	4	2
Third Residential buildings (traditional Islamic House ), The Islamic Places	4	2
Fourthly, The buildings of Sufism (Al-Khanqah, Rabat, Zawiya, Al-Takiya)	4	2
Fifthly, funeral buildings(Mausoleum, Shrine, almshhd)	4	2
Sixth: Water facilities buildings (Al Sabil Building , Bridges, Water gauges)

## Expected learning outcomes of the program

#### Knowledge

A1- The basic, applied and engineering science principles necessary to provide architecture specialization, such as mathematics, stereotyping, physics, engineering drawing, statistics, computer techniques and automation.

A2. Specialized architecture sciences cover various aspects of architectural design, implementation, construction, executive drawings, architectural and free drawing, as well as interior design, outdoor space design, urban design, and city planning. Architecture is concerned with many aspects and interacts with many sciences and contributes to important applications in everyday life.

A3. Professional objectives and supporting foundations: Supporting skills include application within theoretical frameworks, such as reporting and research, as well as knowledge of economic, legal, health, social and security determinants.

#### Skills

**1b.** Design skills: Capability to create innovative and sustainable architectural designs, including interior design and design of outdoor and urban spaces.

**2b.** Research and analysis skills: developing research and information collection and analysis skills for application in design projects, including environmental, economic, and social considerations.

**3.b.** Communication and collaboration skills: Enhance effective communication and teamwork skills with classmates and specialists in multiple areas, including writing reports and presenting ideas clearly and convincingly.

Ethics

C1 Creativity and Innovation: Enhancing the values of creativity and innovation in the design and research process, contributing to the development of innovative and sustainable architectural solutions.

C2 Social and environmental responsibility: Promote awareness of the architect's social and environmental responsibility and ensure the application of sustainable development principles in design and construction projects.

## Course Weekly Outline

Week	Topics Covered	Notes
1	Architecture and planning analytical study of the project and information collection, maps, this	
2	include:	
3	<ul> <li>The importance of the project in the city, and the approximate initial size of the project in comparison with similar examples.</li> <li>Site selection and give alternatives, justifications of choice.</li> <li>Study of the site, dimensions, size, neighborhood, the surrounding land uses, roads and entrances, the environmental study and construction of the site; determine the objectives of solving the problems of the site Analyzing the physical elements of the site. Site Analysis/ analyzing the non-physical elements of the site. Studying the architectural Concepts related to the site contents.</li> </ul>	

	- The initial submission of the first stage (location and size).	
4	Aanalytical study design of the project include: An analytical study of similar examples of	
5	local, Arab and international (the study of theory familiar to understand the nature of the project	
6	,relationships of different parts to each other and recognize the problems with the design) Study the components of the project and the relationship between these components. Analyzing the relationship between Spaces according to the movement and clustering. Analyzing the	
	relationships between the project spaces by using Matrix. The Bubble Diagram of the project and the spatial zoning schemes. Site Analysis	
	<ul> <li>Analytical Study of the platform and space required external and internal</li> <li>Study of furniture and basic supplies for the project Presentation</li> </ul>	
7	The special problem, Each student is directed to study a new trend (linked to his project) like	
8	high tech. and Sustainable Architecture	
9	Study systems include: - A structural study (structural systems used in this type of projects,	
10	forms materials, and the impact of the proposed materials on the form of product identity, and	
	the relationship to the city Study of environmental (impact of the environment on the project	
	and the project's impact on the surrounding environment) Study of engineering services systems on the project (services, electrical, air conditioning, entrances and exits of safety and security).	
	- The initial submission of the third stage (of structural systems and services).	
11	Spatial zoning on the site to offer solutions and design alternatives include:	
12	- Submission of the pre-final (with the site analysis and identification of the main entrances	
13	and traffic regulations required within the site).	
	- An initial zoning of the components of the project on the site, finding alternatives to preliminary design ideas.	
14		
15	Final submission of a thesis.	
16
