Academic Program and

Academic Program and Course Description Guide

Introduction:

The educational program of computer engineering department consists of a carefully structured series of courses, organized within an academic syllabus that outlines specific learning procedures and experiences. Its primary aim is to enhance and develop students' competencies, preparing them effectively for employment and meet the requirements of the job market. To ensure its quality and relevance, the program undergoes annual reviews and assessments through internal evaluations or external mechanisms, such as the External Examiner Program.

The academic program description provides a brief overview of the program's key components and its courses. It highlights the specific skills students are expected to develop in alignment with the program's objectives. This description plays a vital role in the accreditation process and is collaboratively prepared by the faculty under the guidance of academic committees within the relevant departments.

This second edition of the guide presents an updated description of the academic program, incorporating revisions to the sections and content from the previous version. These updates reflect recent changes and advancements in the Iraqi educational system, including the academic program description in both its traditional formats—annual and semester-based, as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this context, it is essential to stress the significance of preparing academic program and course descriptions, as they are crucial for the effective operation of the educational process.

Academic Program Description Form

University Name: University of Mosul

Faculty/Institute: College of Engineering

Scientific Department: Computer Department

Academic or Professional Program Name: Bachelor's in Computer

Engineering

Final Certificate Name: Bachelor's in Computer Engineering

Academic System: Bologna process (First and Second Years), Semester

System (Third Year), Courses System (Fourth Year)

Description Preparation Date: 18/11/2024

File Completion Date: 18/11/2024

Signature:

Head of Department Name: Prof.

Dr. Salah Abdulghani Jaro

جامعة الموصل 2025 Date: 26/3/2025

The file is checked by:

Department of Quality Assurance and University Performance

Director of the Quality Assurance and University Performance

Department: Date: 6/4/2025

Signature:

roval of the Dean

Name: Assist prof. Dr. Ayman Talib

Signature:

Scientific Associate

Date 6/4/2025

Concepts and terminology:

Academic Program Description: The academic program description offers a concise overview of its vision, mission, and goals, along with a clear outline of the intended learning outcomes, aligned with defined instructional strategies.

<u>Course Description:</u> It presents a concise overview of the course's key features and the expected learning outcomes for students, serving as evidence of how effectively they have benefited from the learning opportunities provided. This description is based on the overall academic program description.

Program Vision: A forward-looking vision for the academic program that is advanced, inspiring, motivating, realistic, and achievable.

Program Mission: It concisely outlines the goals and the actions required to achieve them, while also identifying the program's development strategies and future directions.

Program Objectives: These are statements that define what the academic program aims to accomplish within a set timeframe, and they are both measurable and observable.

<u>Curriculum Structure:</u> This includes all courses or subjects offered within the academic program, based on the approved learning system (semester-based, annual, or Bologna Process), whether they are required by the ministry, university, college, or academic department, along with their corresponding credit hours.

<u>Learning Outcomes</u>: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies:</u> These are the methods employed by faculty members to enhance student teaching and learning. They consist of planned approaches aimed at achieving the learning objectives and encompass all classroom and extracurricular activities designed to fulfill the program's learning outcomes.

:

1. Program Vision

The Department of Computer Engineering aspires to be a leading center in specialized fields such as computer networks, intelligent systems, and others that contribute to the technological advancement of Iraqi society and the labor market. The department also seeks to implement international academic quality standards in order to prepare highly competent engineers and researchers capable of keeping pace with scientific developments and providing innovative solutions through the integration of theoretical knowledge with practical applications.

2. Program Mission

- 1- Preparing qualified engineers to work in the field of computer engineering.
- 2- Equipping graduates with distinguished skills and advanced knowledge that enable them to face contemporary technological challenges with competence and efficiency.
- 3- Providing qualified experts holding advanced academic degrees in various fields of computer engineering, thereby contributing to serving society and benefiting from their scientific and research expertise.
- 4- Developing students' abilities and strategies to deal with real-world problems through the enhancement of constructive and advanced scientific thinking skills.
- 5- Improving students' communication skills, encouraging teamwork, and supporting outstanding and creative ideas.
- 6- Strengthening ties with department alumni by actively involving them in scientific seminars, conferences, and continuous learning activities.

3. Program Objectives

- 1- Preparing engineering cadres distinguished by high professional ethics, teamwork spirit, and the knowledge and skills required to design, analyze, and develop computer systems, while maintaining follow-up with them after graduation.
- 3- Continuously updating curricula to follow the scientific progress and meet labor market needs, adopting quality standards and principles of sustainable engineering to serve society within the framework of national development.
- 3- Keeping up with the latest scientific research across different specializations through faculty research as well as graduate theses and dissertations, while fostering a culture of lifelong learning, research, and self-development.

4. Program Accreditation

The program does not yet have program accreditation.

5. Other external influences

The Ministry of Higher Education and Scientific Research is the sponsor of the program

8. Expected learning outcomes of the program

Knowledge

- Ability to identify, formulate, and solve computer engineering problems using foundations in engineering, science, and mathematics, and applying techniques such as digital system design, embedded systems, real-time systems, and computer networks. (Outcome 1)
- Capability to apply the engineering design process to produce solutions that meet specified needs while considering public health, safety, economic, social, and environmental factors. (Outcome 2).

Skills

- Proficiency in developing and conducting appropriate experiments, analyzing and interpreting data, and using engineering judgment to draw reliable conclusions supporting technical decision-making. (Outcome 3).
- Skill in communicating effectively, both orally and in writing, in Arabic and English with teams, clients, and the wider community. (Outcome 4).
- Competence in working effectively as a member or leader of multidisciplinary teams by setting goals, planning tasks, meeting deadlines, and creating a collaborative and inclusive environment. (Outcome 7).

Ethics

- Awareness of ethical and professional responsibilities and the ability to make informed decisions considering the economic, environmental, and societal impact of engineering solutions at local and national levels, including safe practices in areas such as cybersecurity and data privacy. (Outcome 5).
- Recognition of the need for lifelong learning, selecting appropriate learning strategies, and staying current with emerging technologies such as artificial intelligence, the Internet of Things, and cloud computing. (Outcome 6).

9. Teaching and Learning Strategies

- Giving lectures inside classrooms.
- Interaction between the teacher and students through training lectures.
- Conducting practical experiments in laboratories.
- Assigning the learner to conduct a report on a specific topic.
- Assigning the learner to conduct a specific practical project.
- Conducting oral exams by discussing a specific issue.
- Conduct daily examinations.
- Conducting quarterly exams.

10. Evaluation methods

- Conducting oral exams by discussing a specific issue.
- Conduct daily examinations.

• Conducting quarterly exams.

	GRADING SCHEME مخطط الدرجات										
Group	Grade	التقدير	Marks (%)	Definition							
	A - Excellent	امتياز	90 - 100	Outstanding Performance							
Success	B - Very Good	جيد جدا	80 - 89	Above average with some errors							
Group	C - Good	ختر	70 - 79	Sound work with notable errors							
(50 - 100)	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings							
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria							
Fail	FX – Fail	راسب - قيد المعالجة	(45-49)	More work required but credit awarded							
Group (0 – 49)	F – Fail	راسب	(0-44)	Considerable amount of work required							
Note:			_								

Number Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Professional Development

Mentoring new faculty members

- Teaching participation in the teaching methods course.
- The teacher passes the teaching competency course.
- Teaching participation in practical laboratories.
- Teacher participation in giving discussion lectures.

Professional development of faculty members

- A. Academic and professional development for faculty members
- B. Participation in international, Arab and local scientific conferences and workshops.
- C. The possibility of using some local scientific skills in teaching or conducting scientific research.
- D. Using modern technology and advanced educational methods in teaching.

12. Acceptance Criterion

Admission requirements: The policy for accepting new students in the Department of Computer Engineering is as follows: The applicant for admission to preliminary studies in the Department of Computer Engineering must have an Iraqi preparatory certificate or its equivalent according to scientific standards. In addition to accepting the first student from the Department of Computer Science and the Institute of Computer Systems.

The Ministry of Higher Education and Scientific Research is responsible for accepting students, and it is centralized according to the department's accommodation plan, the student's grade, and his desire. The accepted student then submits the required documents within the specified period for registration.

Admissions: General conditions for admission:

A student who is accepted into universities is required to be:

- 1- Iraqi nationality.
- 2- Holds an Iraqi preparatory school certificate supported by the approval of the General Directorate of Education in the governorate or its equivalent.
- 3– The student must have been born as determined by the Ministry in that academic year.
- 4- To pass the medical examination according to the conditions of each study.
- 5- Graduates:
 - a. Current academic year.
- B. For the previous academic year, those who have not been centrally accepted into any college or institute are accepted according to the minimum year of their graduation.
- 6- Non-Iraqi students who hold an Iraqi preparatory certificate and are centrally accepted are notified in writing to refer to the Central Admissions Department/Immigrant Division to clarify their exemption or claim for tuition fees in foreign currency in accordance with the controls contained in Chapter Seven.

The general principles adopted by the central admission system:

Nomination of students for admission to colleges and institutes shall be in accordance with the central admission system implemented electronically according to the following principles:

- 1- The student is accepted according to the choices shown in the application form through the electronic portal of the Department of Studies, Planning and Follow-up and on the basis of competition in general.
- 2- The student's submission of the admission form is not considered obligatory in order to be accepted according to the choices presented by him permanently, as his acceptance depends on his competition with the rest of the students according to the established principles.

13. The most important sources of information about the program

- Head of Department.
- Department rapporteur.
- Examination Committee.
- •scientific Committee.
- Curriculum Committee.
- Study program guide from the Quality Committee.

14. Program development plan

- A) Supporting the educational institution for the purpose of full-time study.
- B) The great need for holders of university degrees to develop the country.
- C) The extent of government support for official companies

Name: Dr Ahmed Mamoon Fac	dhil								
Email: ahmedalkababji72@uor	mosul.edu.iq								
8. Course Objectives									
 Course Objectives To develop problem solving skills and understanding of circuit analysis theorems through the application of (superposition, source transformation, mesh analysis, Nodal analysis) To Determine the conditions for maximum power transfer to any circuit element To understand the importance of transients in RL, RC & RLC. To understand the principals of Resonant circuits To understand the principals of Three-phase circuits 									
9. Teaching and Learning Strategies									

Strategy

The main strategy that will be adopted in delivering this module is to encour students' participation in the exercises, while at the same time refining expanding their critical thinking skills. This will be achieved through class interactive tutorials and by considering type of simple experiments involving so sampling activities that are interesting to the students

10. Course Structure

Week		Required	Unit or Subject Name	Learning	Evaluation
	Hours	Learning		Method	Method
		Outcomes			
Week 1	5	Demonstrate a thorough understanding of circuit analysis theorems underlying Direct Current (DC) and Alternating Current (AC) electrical circuits.	Circuit theory: source transformation [ch3,5,8,9]	Lecture	Oral exam
Week 2	5	Apply circuit analysis theorems (superposition, source transformation, mesh analysis, Nodal analysis)	Circuit theory: superposition [ch3,5,8,9] +quiz	Lecture &Lab	Quiz
Week 3	5	Apply circuit analysis theorems (superposition, source transformation, mesh analysis, Nodal analysis)	Circuit theory: Mesh analysis [ch3,5,8,9]	Lecture	Oral exam Home work
Week 4	5	Apply circuit analysis theorems (superposition, source	Circuit theory: nodal analysis [ch3,5,8,9] +quiz	Lecture &Lab	Quiz

I		tuon of o wee at '			
		transformation, mesh analysis, Nodal analysis)			
Week 5	5	Apply Thevenin's& Norton's theorem, maximum power transfer, both in DC and AC.	Circuit theory: thevenin [ch3,5,8,9]	Lecture	Oral exam Home work
Week 6	5	Apply Thevenin's& Norton's theorem, maximum power transfer, both in DC and AC.	Circuit theory: Norton's theorem [ch3,5,8,9] +quiz	Lecture &Lab	Quiz
Week 7	5	Apply Thevenin's& Norton's theorem, maximum power transfer, both in DC and AC.	Circuit theory: maximum power transfer[ch3,5,8,9] +quiz	Lecture	Quiz
Week 8	5		Mid exam		Exam
Week 9	5	Analyse transient responses of RL, RC and RLC for various circuit configurations	Steady-State power Analysis [ch10] +quiz	Lecture	Quiz Oral exam Home work
Week 10	5	Analyse transient responses of RL, RC and RLC for various circuit configurations	Transient circuits: RL circuit's [ch7] +quiz	Lecture &Lab	Quiz Oral exam Home work
Week 11	5	Analyse transient responses of RL, RC and RLC for various	Transient circuits: RC circuit's [ch7]	Lecture	Oral exam Home work

		circuit configurations			
Week 12	5	Analyse transient responses of RL, RC and RLC for various circuit configurations	Transient circuits: RLC circuit's [ch7] +quiz	Lecture &Lab	Quiz
Week 13	5	Get an introduction to Resonant circuits and Three-phase circuits	Resonant circuits [ch11] +quiz	Lecture	Oral exam Home work
Week 14	5	Get an introduction to Resonant circuits and Three-phase circuits	Three –phase circuits [ch11]	Lecture &Lab	Quiz
Week 15	5	All	Preparatory week before the final Exam		

11.

Quizzes 16%, Onsite Assignments 10%, Projects/Lab 10%, Reports 4%, Midterm Exam 10%, Final Exam 50%.

8. Course Objectives

Course Objectives

The aims of the module are:

- (1) to develop a knowledge of both manual and computer-generated engineering drawing.
- (2) to create, edit and print a variety of technical drawings using a CAD system.
- (3) to communicate design ideas and technical information to engineers and other professionals throughout the design process
 - (4) An engineering drawing represents a comp three-dimensional object on a two-dimensional piece paper or computer screen by a process called project

9. Teaching and Learning Strategies

Strategy

Type something like: The main strategy that will be adopted delivering this module is to encourage students' participation in exercises, while at the same time refining and expanding their critithinking skills. This will be achieved through classes, interact tutorials and by considering type of simple experiments involving so sampling activities that are interesting to the students.

er of Units (Total)
ll, if more than one name)
This course provides students with the basic skills of Mathematics, which is the core of many mathematical disciplines such as optimization, financial mathematics, statistics, simulation, etc. This subject introduces students to the fundamental concepts and skills of Mathematics.

9. Teaching and Learning Strategies

Strategy

The main strategy to be adopted in the delivery of this module is to equip students with the skills needed to understand mathematics, specifically in integration, transcendental functions and applications of integration. At the same time, improving and expanding students' thinking skills in strong foundations, mathematical concepts and techniques applied to various disciplines in computer engineering, including optimization, financial mathematics and simulation. This will be achieved through classes and interactive tutorials.

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
Week 1	4	Apply the fundamental concepts of integration, including definite, indefinite integrals and calculate areas under a carve.	Definite and Indefinite Integrals and area under a graph. [ch5]	Lecture & Tutorial	
Week 2	4	Demonstrate an understanding of the fundamental theorems of integral mathematics and their applications in various mathematical disciplines, such as areas and volumes		Lecture & Tutorial	
Week 3	4	Apply the fundamental of integration to solve mathematical problems and calculate volumes using several methods.	Volumes of solids of revolution using washer method and cylindrical shells method [ch6] +quiz	Lecture & Tutorial	Quiz Home work
Week 4	4	Apply basic concepts of integration to calculate surface areas, and lengths of curves.	Length of curves in the plane and Areas of surfaces of revolution [ch6]	Lecture & Tutorial	

Week 5	4	Understand and analyze the properties of inverse functions.	Inverse functions [ch1] Logarithm defined as an integral [ch7] +quiz	Lecture & Tutorial	Quiz
Week 6	4	Understand and analyze the properties of transcendental functions, including the derivatives and integrals of natural exponential and logarithmic.	The natural logarithmic function. The Integrals of tan(x), cot(x),sec(x) and csc(x). Logarithmic Differentiation.[ch7]	Lecture & Tutorial	Home work
Week 7	4	Understand and analyze the properties of transcendental functions, including the derivatives and integrals of general exponential e ^x , a ^x and log _a (x).	The derivative and integral natural exponential function. The general expoential ax and logarithmic loga(x) functions and and their derivative and integral.[ch1]+[ch7] +quiz	Lecture & Tutorial	Quiz
Week 8	4	Analyze and evaluate the behavior and properties of inverse trigonometric functions, to support mathematical modeling and problem-solving.		Lecture & Tutorial	Home work
Week 9	4		Mid exam		Exam
Week 10	4	Utilize techniques of integration by using basic integration formulas.	Techniques of integration using basic integration formulas. [ch8]	Lecture & Tutorial	Quiz Home work

4	Utilize techniques of integration, such as integration by parts.	Integration by parts. Tabular integration. [ch8]	Lecture & Tutorial				
4	Apply and use techniques of trigonometric integrals.	Trigonometric integrals.[ch8]	Lecture & Tutorial				
4	Use trigonometric substitutions to simplify and solve complex mathematical integration.	Trigonometric substitutions.[ch8] +quiz	Lecture & Tutorial	Quiz Home work			
4	Utilize partial fractions in rational functions to simplify and solve complex mathematical integration.	Integration of rational functions by partial fractions. [ch8]	Lecture & Tutorial				
4		Final exam		Exam			
11. Course Evaluation:							
	Quizzes	5	20% (25)				
	Assignments	5	16% (15)				
	Midterm Exam	1.5 hr	20% (20)				
	4 4	4 Apply and use techniques of trigonometric integrals. 4 Use trigonometric substitutions to simplify and solve complex mathematical integration. 4 Utilize partial fractions in rational functions to simplify and solve complex mathematical integration. 4 Prese Evaluation: Quizzes Assignments	4	4 Apply and use techniques of trigonometric integrals. 4 Apply and use techniques of trigonometric integrals. 4 Use trigonometric substitutions to simplify and solve complex mathematical integration. 4 Utilize partial fractions in rational functions to simplify and solve complex mathematical integration. 4 Integration of rational functions to simplify and solve complex mathematical integration. Final exam 4 Final exam Cuizes 5 20% (25) Assignments 5 16% (15)

8. Course Objectives

Course Objectives

Focus on providing students with a comprehensive understanding of semiconductor devices, including diodes and transistors. By achieving these learning outcomes, students will develop the necessary knowledge and skills to analyze and apply these electronic components in various electronic systems and applications.

9. Teaching and Learning Strategies

Strategy

Encourage the students to participate in different activities such as solving questions through critical and logical thinking.

Course	The basic objective of this course is to give a thorough understanding of						
Objectives	the binary system, Boolean algebra, logic gates, Karnaugh map, digital						
,	comparator and decoding circuits and their applications.						
9. Teaching	and Learning Strategies						

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Course Description Form

1. Course Name:

English Language Pre-Intermediate

2. Course Code:

N/A

3. Semester/Year:

First Semester / Second Grade

4. Description Preparation Date:

1-4-2024

5. Available Attendance Forms:

In class + Online

6. Number of Credit Hours(Total)/Number of Units(Total)

30/1

7. Course administrator's name (mention all, if more than one name)

Name: Basman Mahmood Hasan Alhafidh

Email: bm.alhafidh@uomosul.edu.iq

8. Course Objectives

Course

Objectives

This course focuses on building on the language skills and knowledge acquired in previous levels, with the aim of developing students' fluency, accuracy and overall linguistic competence. By the end of the course, students will acquire these skills:

1) Vocabulary Expansion: Enhance students' vocabulary by introducing them to new words, idiomatic expressions, and constructions. This includes both general and subject-specific vocabulary relevant to upper intermediate level.

- 2) Grammar development: Enhance and expand students' understanding of English grammar. This may involve revisiting and reinforcing previously learned grammatical points and introducing more complex structures and tenses.
- 3) Reading Comprehension: Improving reading skills through a variety of texts, such as articles, short stories, and excerpts from novels. Students will focus on understanding main ideas, identifying supporting details, and inferring meaning from context.
- 4) Writing skills: Developing writing abilities through guided exercises and assignments. Students may be encouraged to write essays, reports, letters, or other types of texts, focusing on coherence, consistency, and accuracy.
- 5) Listening Comprehension: Enhance listening skills through a range of authentic audio materials, including dialogues, interviews and lectures. Students will practice understanding main ideas, specific details, and implicit information.
- 6) Speaking and Conversation: Encouraging students to express themselves confidently and fluently through various speaking activities. This includes participating in discussions, debates, role-plays and presentations, with an emphasis on accuracy, coherence and appropriate use of language.
- 7) Cultural Awareness: Expand students' understanding of English-speaking cultures and societies through authentic materials and discussions on various topics. This aims to enhance intercultural communication skills and foster a deeper appreciation of diverse viewpoints.

9. Teaching and Learning Strategies

Strategy

The main strategy to be adopted in the delivery of this unit is to encourage students' participation in the exercises, while at the same time improving and expanding their critical thinking skills. This will be achieved through interactive classroom and tutorials and by considering the type of simple experiments that include some sampling activities that are of interest to students.

7. Course administrator's name (mention all, if more than one name)

Name: amar daood

Email: amar.daood@uomosul.edu.iq

8. Course Objectives

Course Objectives

- Learn all principles and basics of the statistics.
- Be familiar with the Descriptive and Inferential statistics.
- understand Concepts of Probability Theory.
- 9. Teaching and Learning Strategies

Strategy

- 1- Apply knowledge of mathematics, science, and engineering.
- 2- Learn all basic mathematical of statistics and probability.
- 3- The student should be able to understand and analyze dataset.

Week	Hours	Required	Unit or Subject	Learning	Evaluation
		Learning	Name	Method	Method
		Outcomes			
1,2	2	Learn basic of statistics	Role of statistics in science, types of statistics (Descriptive and Inferential), data presentation	lecture	Oral Exam

			(Arithmetic mean, Median, Mode).		
3,4	2	Learn types of statistics	Descriptive statistics, histogram frequency distribution, data limits, data tabulations, polygon, ogive.	lecture	Oral Exam Homework
4,5	2	Understand the basic of probability	Basic Concepts of Probability Theory (random events and sample space), relationship between statistics and probability.	lecture	Homework
6,7	2	Review sets and their operations and rules	Sets and probabilistic models, axioms of probability, rule of Probability	lecture	Quiz
8	2	Learn definition of conditional probability	The definition of conditional probability and their properties	lecture	Oral Exam
9	2	Understand Multiplication rule, total probability theorem, Bayes' theorem	Multiplication rule, total probability theorem, Bayes' theorem	lecture	Oral Exam
10	2	Learn Three events, mutually and non- mutually events	Three events, mutually and non- mutually events	lecture	Quiz
11	2	Learn Counting	Counting, permutation, combination	lecture	Homework
12	2	Understand random variable	The definition and classification of random variable (Discrete and Continuous), type of discrete distribution.	lecture	Exam
13	2	Learn Discrete distributions	Discrete probability distributions, Binomial and Poisson Distribution.	lecture	Homework
14	2	Learn Continuous distribution	Continuous distribution, normal distribution	lecture	Oral Exam Quiz
15			Final exam

Name: Warqaa Younis Email: warqaa.younis@uomousl.edu.iq

8. Course Objectives

Course Objectives

- This course gives the students some more advanced subjects in engineering mathematics as partial derivative, differential equations series and Fourier series and Multiple Integrals; this is to prepare the student for the next course and the other subjects like the numerica and engineering analysis.
- To develop mathematical skills so that students are able to apply mathematical methods & principles in solving problems from Engineering fields.
- To make aware students of the importance and symbiosis between Mathematics and Engineering

9. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Week	Hours	Required	Unit or	Learning	Evaluation
		Learning	Subject	Method	Method
		Outcomes	Name		
Week 1	3	Ability to solve multivariable functions with knowledge of their properties	Limits and continuity (multivariable functions)	Lecture	Quiz,Assignment, Exam
Week 2	3	Ability to solve Partial derivatives with knowledge of their propertie	Partial derivatives (definitions, functions of more than two	Lecture	Quiz,Assignment, Exam

			variables)		
Week 3	3	Ability to solve Chain rule for functions by using two or three variables and Solve maxima and minima and saddle point	Chain rule for functions of two or three variables , Maxima and minima and saddle point	Lecture	Quiz,Assignment, Exam
Week 4	3	Ability to solve Double integral Cartesian integrals form with knowledge of their properties	Double integral (properties, Cartesian integrals form)	Lecture	Quiz,Assignment, Exam
Week 5	3	Ability to solve Double integral by Changing Cartesian integrals into polar form	Double integral (Polar form, Changing Cartesian integrals into polar form)	Lecture	Quiz,Assignment, Exam
Week 6	3	Ability to solve Triple integrals in Cartesian coordinates with knowledge of their properties	Triple integrals (Properties, Triple integrals in Cartesian coordinates)	Lecture	Quiz,Assignment, Exam
Week 7	3	Ability to solve Triple integrals in cylindrical coordinate with knowledge of their properties	Triple integrals (Triple integrals in cylindrical coordinates)	Lecture	Quiz,Assignment, Exam
Week 8	3	Ability to solve triple integral with any coordinate r and Increasing the student's knowledge of triple integral applications and how they linked it	Triple integrals (Application)	Lecture	Quiz,Assignment, Exam

		with the life			
Week 9	3	Ability to solve Fourier series, Trigonometric form with knowledge of their properties	Fourier Series (Trigonometric form)	Lecture	Quiz,Assignment, Exam
Week 10	3	Ability to solve Fourier series with te knowledge of even and odd function, Half Wave Symmetry.	Fourier Series (even and odd function , Half Wave Symmetry)	Lecture	Quiz,Assignment, Exam
Week 11	3	Ability to knowledge Line Spectrum (harmonic) the Fourier Series and draw them	Line Spectrum (harmonic) the Fourier Series	Lecture	Quiz,Assignment, Exam
Week 12	3	Ability to solve Complex Exponential form of the Fourier Series with the knowledge of their properties	Complex Exponential form of the Fourier Series,	Lecture	Quiz,Assignment, Exam
Week 13	3	Ability to understand ve Vectors: (definition, notation, with knowledge of their properties	Introduction to Vectors: (definition, notation, properties)	Lecture	Quiz,Assignment, Exam
Week 14	3	Ability to solve Vector algebra by using addition, subtraction, multiplications	Introduction to Vectors: (Vector algebra: addition, subtraction, multiplications)	Lecture	Quiz,Assignment, Exam
Week 15	3	Ability to solve Vector functions as lines, planes,	Vector functions: lines, planes,	Lecture	Quiz,Assignment, Exam

	fields, Eigen vector and Eigen values to Increasing the student's knowledge of vectors and its application	fields, Eigen vector and Eigen values

8. Course Objectives

Course Objectives

- Analyze and design electronic applications.
- Nonlinear integrated circuit development such as diode.
- Design systems for rectifying and amplifying

Waves.

- Gain and frequency response response calculations.
- Operational amplifier and feedback circuits.
- In addition to have a lab and practical experiments.

9. Teaching and Learning Strategies

Strategy

Encourage the students to participate in different activities such as solving questions through critical and logical thinking. In addition to do practical experiments.

20. Course Objectives	
Course Objectives	• The module aims to introduce students to a wide vari
	of data structures and algorithms. It provides stude
	with a coherent knowledge of techniques
	implementing data structures and algorithms. It a
	discusses the complexity, advantages,
	disadvantages of different data structures
	algorithms. Finally, it introduces the main algorith
	for fundamental tasks such as sorting and searching.

21. Teaching and Learning Strategies

Strategy

There are a number of teaching and learning activities including lectulaboratories, and group projects. The concepts and principles of complex analysis in algorithms, data structures, search algorithms, sort algorithms, object-oriented programming will be covered in lectures.

Week	Hours	Required Learning Outcomes	name	Learning method	Evaluation method
Week 1	4	Examine abstract data types, concrete data structures, and algorithms.	Introduction and review, information hiding, Encapsulation, Design, and implementation of list ADTS using arrays and linked lists.	Lecture	Oral exam
Week 2	4	Examine abstract data types, concrete data structures, and algorithms.	Recursion in Programming and Problem-Solving Recursive valued functions: Factorial, Classical problems.	Lecture &Lab	Quiz

8. Course Objectives

Course Objectives

The course "Computational Methods for Data Analysis" is designed provide students in the Bachelor of Science in Computer Engineers program with a solid foundation in both numerical analysis and statistics. This course combines key concepts and techniques from both disciplines to equip students with the necessary tools to analyze and

disciplines to equip students with the necessary tools to analyze ar interpret data in various engineering and computational contexts.

9. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Week	Hours	Required Learning Outcomes	Unit or Subject	Learning Method	Evaluation Method
Week1	2hr	Understand and analyze dataset.	Introduction to Data Analysis	Lecture	Oral exam
Week2	2hr	Learn all basic mathematical of statistics and probability.	Descriptive Statistics, Mea of central tendency (mean, median, mode), Measures dispersion (variance, standa deviation, range)	Lecture	Home work
Week3	2hr	Compute statistics measurements to conclude the distribution of the collected data	Data visualization techniqu (histograms, box plots, scatter plots)	Lecture	Oral exam
Week4	2hr	Perform conducting predication analysis which can be applied into data mining.	Probability Th Fundamentals of probabilit	LECHIE	Quiz

Week5	2hr	Use the techniques and skills to design and analysis system using the engineering tools to provide better description of real-world data.	Conditional probability, Ba rules for Data Mining Machine Learning	Lecture	Quiz Oral exam Home work
Week6	2hr	Probability basics	Discrete and continuous probability distributions (binomial, no exponential)	Lecture	Quiz
Week7	2hr	Probability calculations	Probability density and cumulative distrib functions	Lecture	Home work
Week8	2hr	List theories and concepts used in Numerical Analysis.	Introduction to Numerical Methods for Data and error Analysis	Lecture	Oral exam
Week9	2hr	Classifying the numerical techniques to compute approximate solutions of linear and nonlinear equations and differential equations.	Numerical Methods for line Data Analysis	Lecture	Home work
Week10	2hr	compute solutions of nonlinear equations	Numerical Methods for non- linear Data Analysis	Lecture	Quiz
Week11	Week11 2hr Apply numerical techniques for interpolation.		Interpolation and extrapola	Lecture	Quiz Oral exam Homework
Week12	2hr	Apply numerical techniques for integrations.	Numerical integration	Lecture	Home work
Week13	2hr	Apply numerical techniques for differentiation	Numerical differentiation	Lecture	Oral exam
Week14	2hr	Apply the methods, formula and algorithms taught to	Regression	Lecture	Quiz

		simple problems;			
Week15	2hr				
11. Course Evaluation					

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports etc. will be according the following table:-

	As	Time/Number	Weight (Marks)
	Quizzes	2	15% (15)
Formative assessment	Online Assignments	2	10% (10)
roi mative assessment	Onsite Assignments	1	5% (5)
	Report	1	10% (10)
Summative assessment	Midterm Exam	2 hr	10% (10)
Summative assessment	Final Exam	2hr	50% (50)
	100% (100 Marks)

8. Course Objectives	
Course Objectives	Providing knowledge and skills that combine concepts
	Engineering and management
	Improving efficiency and effectiveness in engineering
	projects
	Developing management skills
	Enhancing interaction between engineering and
	administrative departments
	Enhancing the ability to strategic planning
	Achieving sustainability in engineering projects

9. Teaching and Learning Strategies

Strategy

Activating lessons and making them interactive: This includes using interact methods such as group discussions, Group activities and educational games that encourage students to actively participate in the learning process. Using active learning techniques: This includes using technology in learning, such as multimedia, educational software, and electronic platforms, to enhance student interaction and make the learning process more enjoyable and effective.

Encouraging cooperative learning and cultural exchange: This includes encouraging students to work together in small groups, sharing experiences and opinions, and promoting interaction between students from different cultures and backgrounds.

Providing effective feedback: This involves providing students with regular feedback, whether positive to encourage them to move forward, or directive to improve their performance, which helps them improve their understanding and performance

Week	Hours	Required	Unit or	Learning Method	Evaluation
		Learning	Subject		Method
		Outcomes	Name		
1	2	Understanding Definitions and Terms, Knowledge Organizational Structures	Administration organization (definitions terms, organization and organizational structures, committees, correspondences and technic reports)	interaction By adding guiding questions,stimulating discussions and providing	Theoretical exam With Daily exams Written and oral

				colleagues	
2	2	Understanding Decision-Making Processes: •Define decision- making and its importance in engineering management systems. •Explain the stages involved in decision- making processes.	Methods and stages of decision-making	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Theoretical exam With Daily exams Written and oral
3	2	Understanding Project Management Concepts: Define project management and its importance in engineering contexts. Explain the key principles, processes, and methodologies of project management	Engineering Project Management (Definitions, Project Phases)	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Theoretical exam With Daily exams Written and oral
4	2	Understanding of Project Time Planning Concepts: Define project time planning and its significance in project management. Explain the importance of	Project Time Planning (Critical Path Method CPM)	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with	Theoretical exam With Daily exams Written and oral

		scheduling and time management in achieving project objectives		the lecturer or colleagues	
5	2	Explain how Data visualization, including bar charts, contributes effective decision-making in engineering management contexts	- bar charts	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Theoretical exam With Daily exams Written and oral
6	2	Identify the role of data visualization facilitating decision-making processes in engineering management.	sagittal charts	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Theoretical exam With Daily exams Written and oral
7	2	Understanding Precedence Charts: • Define what precedence charts are and their significance in	Precedence charts	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing	Theoretical exam With Daily exams Written and oral

		project management and engineering. Explain the purpose of precedence charts in visualizing task dependencies and sequencing in engineering projects.		Opportunities to ask questions and communicate with the lecturer or colleagues	
8	2		Midterm Exam	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Theoretical exam With Daily exams Written and oral
9	2	Understanding The types of project control,time costs , and quality	Types of project control (time, costs, quality)	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or	Theoretical exam With Daily exams Written and oral

				colleagues	
10	2	Identify key factors and criteria involved in selecting a project site, such as location, accessibility, land availability, environmental impact, zoning regulations, and infrastructure availability. Explain the significance of considering site selection criteria in planning phase of a project to ensure feesibility.	Methods for choosing a project site and managing the work site	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Theoretical exam With Daily exams Written and oral
11	2	 Describe different types of contracts used in engineering projects, such as fixed-price contracts, cost- reimbursable contracts, time and materials contracts, and hybrid contracts. Understand the advantages, disadvantages, and suitability of each contract type for different project scenarios and risk profiles. 	Contracting, its types and project Assignment methods	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Theoretical exam With Daily exams Written and oral
12	2	Define what a table of quantities and specifications is and its role in	Table of Quantities and Specifications	Use presentations to simplify difficult concepts and Encourage	Theoretical exam With Daily exams

		engineering projects. • Explain the importance of accurate quantity takeoffs and specifications in project planning, estimating, and procurement processes.		interaction By adding guiding questions,stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Written and oral
13	2	Define quality management and its significance in engineering projects and operations. Explain key quality management principles, such as customer focus, continuous improvement, and process approach.	Quality management quality control	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Theoretical exam With Daily exams Written and oral
14	2	Define quality management and its significance in engineering projects and operations. Explain key quality management principles, such as customer focus, continuous improvement, and process approach	Maintenance Management	Use presentations to simplify difficult concepts and Encourage interaction By adding guiding questions, stimulating discussions and providing Opportunities to ask questions and communicate with the lecturer or colleagues	Theoretical exam With Daily exams Written and oral

8. Course Objectives	
Course Objectives	 This course gives the students the ability to solve and investigate differential equations using different methods, two types of differential equations will be covered (1st order and second order, linear and non-linear), in doing so, the students will gain an advantage for the next courses in that some signal processing and control system problems that will be easier to solve. Also, the Laplace transform can be analyzed and more information about this transform can be gained and investigated To develop mathematical skills so that students are able to apply mathematical methods & principles in solving problems from Engineering fields. To make aware students of the importance symbiosis between Mathematics and Engineering.
9. Teaching and Learning Str	ategies

The main strategy that will be adopted in delivering this module is to encourage

students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes,

Strategy

interactive tutorials and activities that are interesting to the students

10. C	ourse Su		~	-	
		Required	Unit or Subject	Learning	Evaluation
Week	Hours	Learning	Name	Method	Method
		Outcomes			
Week 1	3	Ability to solve Laplace transform problems with knowledge of their properties	Introduction to Laplace transform properties and state application	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 2	3	Ability to solve Laplace transform problems by using Laplace table	Laplace transform table	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 3	3	Ability to solve Laplace transform 1 st shift and 2 nd shift problems with knowledge of their properties	1 st Shifting theorem (Translation in Sdomain) 2 nd Shifting theorem (Translation in Time) Convolution Theorem	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 4	3	Ability to solve Laplace transform with unit step function problems	Unit step function, Initial and final value theorems.	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 5	3	Ability to solve Inverse Laplace transform problems	InverseLaplace Transform.	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 6	3	Ability to solve ordinary differential equation with any order and Increasing the student's knowledge of Laplace applications and how they linked it with the life	Solution of Differential Equations byLaplace Transformation, and Applications of LT	Lecture, Tutorial,	Quiz,Assignment, Exam

Week 7	3	Solve the linear and non-linear differential equations 1 st order and 2 nd order equations, and choose appropriate procedures to solve them	Definition and Classification of differential equation DE (ordinary and partial, order, degree, Linear and non-linear).	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 8	3	Ability to Solve the 1 st order and 2 nd order equations, and choose appropriate procedures to solve them	Solutions of differential equations (general and particular solutions)	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 9	3	Ability to solve 1 st ode by different methods.	1 st order ordinary DEs (Linear, separable homogeneous)	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 10	3	Ability to solve 1 st ode by different methods.	1 st order ordinary DEs (Exact, not Exact, and Nonhomogeneous)	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 11	3	Ability to Solve the IVP and boundary value problem	Mid Term Exam and Initial value problems, Boundary values problems of 2 nd ODEs.,	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 12	3	Ability to Solve 2 nd ode Linear and nonlinear	2 nd order ordinary DEs(Linear 2 nd order des with constant coefficients,	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 13	3	Solve functions With undetermined coefficients	Undetermined Coefficients method,	Lecture, Tutorial,	Quiz,Assignment, Exam
Week 14	3	Ability to solve 2 nd ode by variation of parameters and systems then discussion.	2 nd order DEs with Variable of parameter method, variable coefficients and team works	Lecture, Tutorial,	Quiz,Assignment, Exam

8. Course Objectives

Providing students with a solid understanding of methods for designing and representing microprocessor and memory interface circuits as well as input and output ports.

ourse Objectives

- Inform students about successive generations of microprocessors and the improvements added by each generation.
- Teach students the basics of the different operating modes of most generations of microprocessors.
- Teaching students the nature of arithmetic coprocessors, their structure, and their instructions in a brief manner.
- Enabling students to prepare designs for interfacing circuits and apply those designs using specialized simulation suits.

9. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

8. Course Objectives

Course Objectives

Explaining the principles of magnetism and how to benefit from them, the electric motor and electrical transformers, electromagnetic waves and their characteristics, antennas and their characteristics, types and applications.

- The ability to distinguish, identify and define renewable and non-renewable energy sources
- Compare the differences between renewable and non-renewable energy sources.
- Analyze and identify methods of energy sources and how solar cells work.
- The ability to design a renewable energy system that meets desired needs within given constraints by applying both analysis and synthesis in the design process.
- Measure and calculate the energy and energy needed for the site.

9. Teaching and Learning Strategies

Strategy

Magnetism and energy conversion will be covered for this chapter. Teaching and teaching strategies focus on Develop communication between the teacher and

students to give them more opportunities to express their ideas and opinions. The course includes Activities and exercises guide students to strengthen their skills in solving the energy crisis. Students also learn how to manage And solve energy problems using the correct rules. Efforts will be directed towards teaching students how to think about what beyond common classroom tasks and awaken their desire to excel in the subject.

20. Course Objectives

urse Objectives

This course focuses on building on the language skills and knowledge acquired in previous levels, with the aim of developing students' fluency, accuracy and overall linguistic competence. By the end of the course, students will acquire these skills:

- 1) Vocabulary Expansion: Enhance students' vocabulary by introducing them to new words, idiomatic expressions, and constructions. This includes both general and subject-specific vocabulary relevant to upper intermediate level.
- 2) Grammar development: Enhance and expand students' understanding of English grammar. This may involve revisiting and reinforcing previously learned grammatical points and introducing more complex structures and tenses.
- 3) Reading Comprehension: Improving reading skills through a variety of texts, such as articles, short stories, and excerpts from novels. Students will focus on understanding main ideas, identifying supporting details, and inferring meaning from context.
- 4) Writing skills: Developing writing abilities through guided exercises and assignments. Students may be encouraged to write essays, reports, letters, or

other types of texts, focusing on coherence, consistency, and accuracy.

- 5) Listening Comprehension: Enhance listening skills through a range of authentic audio materials, including dialogues, interviews and lectures. Students will practice understanding main ideas, specific details, and implicit information.
- 6) Speaking and Conversation: Encouraging students to express themselves confidently and fluently through various speaking activities. This includes participating in discussions, debates, role-plays and presentations, with an emphasis on accuracy, coherence and appropriate use of language.
- 7) Cultural Awareness: Expand students' understanding of English-speaking cultures and societies through authentic materials and discussions on various topics. This aims to enhance intercultural communication skills and foster a deeper appreciation of diverse viewpoints.

21. Teaching and Learning Strategies

Strategy

The main strategy to be adopted in the delivery of this unit is to encourage students' participation in the exercises, while at the same time improving and expanding their critical thinking skills. This will be achieved through interactive classroom and tutorials and by considering the type of simple experiments that include some sampling activities that are of interest to students.

8. Course Objectives

Course Objectives

This course will cover many topics and concepts of computer networks and data communication. The topics that will be covered during this course will include the first layer (physical layer), and the second (data link layer). The topics of data communication includes: network devices and transmission media, data and signal transmission, digital and analog transmission, analog transmission, bandwidth utilization, multiplexing, error detection and correction. The topic of computer networks includes: switching (circuitswitched and packet networks), data link control, multiple access links and protocols. The objective of this course is to provide fundamentals of computer networks and data communication.

9. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

32. Course Objectives

Course Objectives

This course will cover many topics and concepts related to digital systems, analogue and digital devices, and their characteristics. Topics to be covered during the discussion will include analogu and digital signals, how to generate digital signals and general characteristics of digital signals and systems. This course deals with the study of conversion methods and how to design digital filte based on FIR and IIR properties.

33. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encour students' participation in the exercises, while at the same time refining expanding their critical thinking skills. This will be achieved through class interactive tutorials and by considering type of simple experiments involving so sampling activities that are interesting to the students.

68.	Course Objectives					
	Course Objectives	• Exploring the importance of opera systems, their goals and functions.				
		Introduction to designing				

implementing operating systems. Covers the various techniques used system to the operating mar resources. Introducing the student to the conc and structure of various opera systems, how they work internally, their most important main parts. Teaching the student the concept of program, methods of scheduling it on central processing unit, and how implement it using many diffe algorithms. How to manage clustering of processes (proces threads, **CPU** schedul synchronization, and learning about concept of deadlock). And ways to se the problem of system stagnation and to prevent or avoid it. 69. Teaching and Learning Strategies The main strategy in this course is to: Strategy Encouraging students' participation in exercises, as well improving and expanding their critical thinking skills. Thro familiarity with the workings of the system, the purpose of its and cases of complete system downtime and dealing with the they occur. This will be achieved through classrooms, interact educational programs, and by considering the type of sin experiments that include some sampling activities that are of inte to students. 70. 8. Course Objectives

Course Objectives

This course will cover many topics and concepts of computer networks. The topics that will be covered during this course will include the network, transport, and application layers of the TCP/IP. The main topics in this course discuss the general issues related to the network layer, IPV4 and IPV6, routing protocols unicast and multicast, discuss the general idea and issues behind the transport layer, discuss the two current protocols UDP, and TCP. Discuss general idea and issues behind the application layer and the protocols DHCP, FTP, TFTP, HTTP, TELNET, SMTP, POP, and IMAP

9. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

10. Course Structure

113. Course Objectives

Course Objectives

- The operating system provides an established, convenient, and efficient interface between user programs and the bare hardware of the computer on which they run.
- In this course we will explore the core principles of operating design systems and implementation, including file systems and storage; memory techniques; management and distributed virtualization systems. Provides the basic knowledge necessary to understand the principle of operating systems.

- This course provides an established, convenient, and efficient interface between user programs and the bare hardware of the computer on which they run.
- Gives the understanding principles operating systems design implementation, including file systems storage; memory management techniq virtualization and distributed systems.

114. Teaching and Learning Strategies

Strategy

- 1. Understand the core principles and concepts of prod management in operating systems, including process creat scheduling, synchronization, and communication, to effectively man system resources and facilitate efficient execution of user programs.
- 2. Gain knowledge of different memory management techniques, s as main memory management and virtual memory, including concilike paging, segmentation, and demand paging, to optimize men utilization and support multitasking in operating systems.

3. Explore the structure and functionality of mass storage syste

- including disk organization, file systems, and I/O systems, to ensemble efficient and reliable storage and retrieval of data in operating system 4. Comprehend the file system interface, implementation, and interminduding file organization, directory structures, and access methods effective management and manipulation of files and directories operating systems.
- 5. Develop an understanding of virtual machines and distribution systems, including virtualization techniques, distributed file systemed and network communication protocols, to enable the deployment

management of scalable and reliable computing environments aci multiple machines and networks.

This course introduces the concepts of the operating system.

 It includes: different memory management techniques, such main memory management and virtual memory, pag segmentation, and demand paging, to optimize men utilization including concepts like and support multitasking operating systems and file systems and storage; virtualization and distributed systems.

It demonstrates the structure and functionality of mass stored systems, including disk organization, file systems, and I/O systems.

Architecture.

- 2. co-design: validation and implementation, peripherals and interfacing :memory : development methodologies and tools.
- 3. learn about: low-level microcontroller programming, hardware aspects, I/O interfacing, timers and signal conversion

126. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Week	Hours	Required	Unit or	Learning	Evaluation
		Learning	Subject Name	Method	Method
		Outcomes			
1	2	Defining embedded systems and identify applications to real word systems.	Introduction to Micro-controller vs. Microprocessor	lecture	
2	2	Learn about the Arduino ATmega2560 architecture Learn about the set of special instructions for programming the Arduino	ATmega2560 Micro-controller Architecture	Lecture+ Lab.	H.W.
3	2	Describe the different I/O configurations available in General Purpose I/O (GPIO)	Arduino Mega 2560 General Purpose Input/ Output Pins description	Lecture+ Lab.

146. Course Objectives

Course Objectives

- The course covers the basic theories and algorithms that are widely used in digital image processing and application.
- Expose students to current technologies and issues that are specific
 to image processing systems. Where in this course students will learn
 digital image processing techniques including representation,
 sampling and quantization, image acquisition, imaging geometry,
 Noise and blur types and causes, image restoration models, image
 transforms, image enhancement, image smoothing and sharpening,
 image restoration and image compression.
- as well as its applications in biometric field.

147. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Week	Hours	Required Learning Outcomes	Unit or Subject Name	Learning Method	Evaluation Method
Week1	2hr	Identify a wide-range of image processing techniques and applications.	Introduction & Fundamentals of digital Image processing and applications.	Lecture	Oral Exam
Week2	2hr	Describe how digital images are represented, manipulated, encoded, compressed and processed.	Image analysis, preprocessing, ROI, Image Algebra.	Lecture	Homework
Week3	2hr	Understanding image types, Spatial Filters and Image quantization methods.	Spatial Filters	Lecture	Quiz
Week4	2hr	Applying the edge detection, operators and masks on images.	Edge detection.	Lecture	Homework, Report

Week5	2hr	Explain the purpose of each process and the underlying mathematical principles.	Image quantization methods.	Lecture	Quiz
Week6	2hr	Applying the edge detection, operators and masks on images.	Operators, Masks.	Lecture	Oral Exam
Week7	2hr	Analyzing noise and blur types.	Noise and blur in images removals	Lecture	Homework
Week8	2hr	Executing and designing appropriate image restoration systems.	System model, Image restoration.	Lecture	Quiz
Week9	2hr	Executing and designing appropriate image restoration systems.	Measurements of image quality.	Lecture	Homework
Week10	2hr	Implementing image compression and decompression methods.	Image Compression types	Lecture	Quiz
Week11	2hr	Implementing image compression and decompression methods.	Image coding.	Lecture	Homework
Week12	2hr	Monitoring recent developments in the field of image transforms and	Discrete Transform (FFT, Cosine transforms and Wavelet transform)	Lecture	Oral Exam

		biometric application.			
Week13	2hr	Implementing image compression and decompression methods.	JPEG & JPEG 2000	Lecture	Homework
Week14	2hr	Monitoring recent developments in the field of image transforms and biometric application.	Introduction to biometric systems types and	Lecture	Quiz
Week15	2hr		applications.		Final Exam
149. Course E	valuation				

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports etc .As illustrated in the table below

Α	Time/Number	Weight (Marks)
---	-------------	----------------

	Quizzes	2	15% (15)
Formative assessment	Onsite Assignments	1	5% (5)
	Report	1	10% (10)
Summative assessment	Midterm Exam	2 hr	10% (10)
Summative assessment	Final Exam	3hr	60% (60)
		Total assessment	100% (100 Marks)

158. Course Objective	ves						
Course Objectives	Understanding Control System Principles: Students will develop a solid understanding of the principles and fundamentals of control systems.						
	 Analyzing and Designing State Variable Models: Students will learn to analyze and design control systems using state variable models. 						
	• Evaluating System Performance: Students will gain the ability to evaluate the performance of control systems, particularly focusing on the time response and dynamic performance of second- order systems.						
	Analyzing Frequency Response: Students will learn to analyze						

control systems in the frequency domain.

• Designing PID Controllers and Digital Control Systems: Students will acquire the knowledge and skills to design proportional-integral-derivative (PID) controllers and understand their application in control systems. They will also explore the stability analysis of digital control systems in the Z-plane and learn techniques like Jury's test.

159. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Week	Hours	Required	Unit or	Learning	Evaluation
		Learning	Subject	Method	Method
		Outcomes	Name		
Week 1	3	Understand the differential equations of physical systems open & closed loop systems.	Introduction: Control system [ch1]	Lecture	Oral exam
Week 2	3	An ability to solve the transfer function of linear systems block diagram models.	Mathematical representation of control system [ch2]	Lecture &Tutorial	Oral exam Home work

Week 3	3	An ability to use Signal flow graph Models, State variables of dynamic systems.	Mathematical representation of control system [ch2]	Lecture	Home work

Name: modhar ahmed hammoudy hussain

Email: modharhammoudy@uomosul.edu.iq

170. Course Objectives

Course Objectives

This course focuses on meaning of public safety, and verifying the hazard types and the safety margins, risks, controlling for all types of hazards. The course includes activities and exercises that guide students to interface and deal with many problems issues in the real practical life, so it will be easier to face such of these problems in the future.

171. Teaching and Learning Strategies

Strategy

- **1.** An ability to skillfully communicate orally with gathering of people and in writing with various managerial levels.
- 2. An ability to perceive ethical and professional responsibilities in engineering cases and make brilliant judgments taking into account the consequences in worldwide financial, ecological and social considerations.
- **3.** An ability to perceive the continual necessity for professional knowledge growth and how to find, assess, assemble and apply it

properly

4. An ability to work adequately on teams and to set up objectives, plan activities, meet due dates, and manage risk and uncertainty.

Number of Credit Hours(Total)/Number of Units(Total) 30/2 7. Course administrator's name (mention all, if more than one name) Name: Dr. Salah Abdulghani Email: eng.salah@uomosul.edu.iq 8. Course Objectives 1-This course will cover the fundamental Course Objectives aspects of wireless networks, with emphasis on current and next-generation wireless networks. 2-The course should provide the students with good understanding of the wireless networking concepts and research directions. 3-Various aspects of wireless networking will covered including: Fundamentals of Wireless LAN IEEE 802.11, IEEE 802.11 Distributed Coordination Function (DCF),

Multiple Access Techniques and Hidden Node Problem, Bluetooth IEEE 802.15.1.

4-Introduction of Wireless Mesh Networks (WMNs), MAC and Network Layers of WMNs.

5- Introduction of Mobile Ad-Hoc Networks (MANET), MAC and Network Layers of Mobile Ad-Hoc Networks (MANET).

6- Introductions, Applications and Challenges of wireless sensor networks (WSNs), Energy Consumption and MAC (Media Address Control) Layer of Wireless ensor Networks, Routing Protocols of WSNs.

7-Introduction of Wireless Network Coding (WNC).

8- Introduction of Introduction to Internet of Things (IoT).

9. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

8. Course Objectives	
Course Objectives	 Speak about topics contained in the textbook accurately and fluently (with a certain error-tolerance). Use basic reading techniques (scanning, skimming, and selecting what is relevant). To be able to follow English lessons, to follow instructions, descriptions and explanations, to take notes when listening. Understand a complicated sentence construction and relations between

- sentences from a language point of view; to acquire new semi-technical vocabulary.
- Use a wide range of vocabulary.
- Apply newly acquired knowledge of grammar.
- Understand, analyze, translate, and paraphrase texts.
- Understand, analyze, translate, and paraphrase listening.

9. Teaching and Learning Strategies

Strategy

- Theoretical lecturing.
- Group working.
- One-to-one speaking test.
- Passage reading and questioning.
- Extracting information from audio scripts.

8. Course Objectives

Course Objectives

- The main objectives of a Biometrics Engineering course typically revolve around educating students on various aspects of biometrics technology and its applications. Here are some common objectives:
- Understanding Biometrics Principles: To impart fundamental knowledge about biometrics, including its principles, techniques, and methodologies for recognizing individuals based on their physiological or

behavioral characteristics.

- Exploring Biometric Technologies: To introduce students to various biometric modalities such as fingerprint recognition, iris recognition, facial recognition, voice recognition, etc., including their underlying mechanisms, advantages, limitations, and real-world applications.
- Technical Proficiency: To develop technical skills for designing, implementing, necessary and evaluating biometric systems, including signal processing techniques, feature extraction, pattern recognition algorithms, and machine learning approaches.
 - Security and Privacy: To address the security and privacy concerns associated with biometric systems, including issues related to data protection, biometric template security, spoof attacks, and ethical considerations.

9. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this subject is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering some sampling activities that are interesting to the students.

Email: hasan.allayla@uomosul.edu.iq

8. Course Objectives

Course Objectives

- define and understand concepts of ethics and professional ethics.
- develop knowledge of and describe basic ethical theories and principles for ethical decision-making.
- identify and think through moral situations and issues encountered a wide range of different professionals.
- apply ethical theories and principles to specific moral challenges and dilemmas faced by professionals.
- develop and improve skills essential in analyzing and resolving eth problems and conflicts in professional settings through the use and application of ethical theories.

9. Teaching and Learning Strategies

Strategy

Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Name: Dr.Sura Nawfal abdulrazzag

Email: Sura.nawfal@uomosul.edu.iq

Name: Ola Marwan

Email: ola.marwan@uomosul.edu.iq

8. Course Objectives

Course Objectives

- The course provides the principles necessary to understand the modern digital control systems, how to analyze these systems in discrete time domain including different techniques and methods, also it learns how to design a complete digital controller, test its stability and improve it. Other topics that are covered sampling process, A/D, D/A converters, z-transform and s-transform relations.
- Discuss the differences between digital and continuous control systems and identify its applications across different industries and contexts.
- Solve digital control system problems using z-transform.
 Sketch simulation diagram of a digital control systems.
- Analyze the systems by reducing the interconnection of sampled data transfer function to single sampled data transfer function.
- Examine the time response of digital control sys and measuring

- the stability of these systems, and decide whether their initial design is acceptable or can be improved.
- Produce design of digital control systems using transform techniques and state-space methods.
- Produce design of various digital controllers using MATLAB and design a control system for motors. Integrate and program real-time control systems with smart sensors.

9. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Week	Hours	Required	Unit or	Learning	Evaluation
		Learning	Subject	Method	Method
		Outcomes	Name		
Week 1	3	Understand digital control, the structure of a digital control system, and examples of digital control systems.	Introduction to Digital Control [ch1]	Lecture	Oral exam
Week 2	3	An ability to solve the Discrete–time system Analysis.	Discrete-Time Systems [ch2]	Lecture &Tutorial	Oral exam Home work

Week 3	3	An ability to use Sampled data systems, ADC/DAC.	Discrete-Time Systems [ch2]	Lecture	Home work
Week 4	3	Understand the State equation of state equation State diagram.	Discrete-Time Systems [ch2]	Lecture & Tutorial	Oral exam Home work
Week 5	3	Analyze the Zero- order hold transfer function (ZOH transfer function).	Fundamental of digital control system [ch3]	Lecture	Oral exam
Week 6	3	Analyze Z- transform and inverse z- transform, Final value theorem, 1st Quiz	Fundamental of digital control system [ch3]	Lecture & Tutorial	Quiz Home work
Week 7	3	An ability to discrete opened and closed loop T.F, Solution of Difference Equations, Solution of State Equations.	Discrete	Lecture	Oral exam Home work
Week 8	3		Mid-term exam.		Exam
Week 9	3	Understand the Simulation diagram.	Transfer Function of Discrete Control Systems [ch4]	Lecture	Oral exam Home work
Week 10	3	Analyze the Transfer function and state space equations transformations	Stability of Digital Control System [ch5]	Lecture & Tutorial	Quiz Home work
Week 11	3	Understand the Time response of digital control system, 2 nd quiz	Digital	Lecture	Oral exam

Week 12	3	Apply the Relationship between z-plane & z-plane	Control system analysis and design [ch6]	Lecture & Quiz	Quiz
Week 13	3	Analyze Jury's stability test, 3d quiz	Control system analysis and design[ch6].	Lecture	Oral exam
Week 14	3	Apply Z-domain root locus design	Control system analysis and design [ch6]	Lecture & Tutorial	Oral exam
Week 15	3		Final exam		Exam
11. Course	Evalua	ation			
Quiz		3	10%		
Assignment		8	20%		
Midterm Exan	n	30	70%

3. Semester / Year:

2nd semester / 4th year

4. Description Preparation Date:

29/3/2024

5. Available Attendance Forms:

In class only

6. Number of Credit Hours (Total) / Number of Units (Total)

30 hours / 2 units

7. Course administrator's name (mention all, if more than one name)

Name: Dr. Qutaiba Ibrahim Ali

Email: qutaibaali@uomosul.edu.iq

Name: Dr. Mustafa Siham Abdulrahman Qassab

Email: mustafa.qassab@uomosul.edu.iq

8. Course Objectives

Course Objectives

This course will cover many topics such as Corporate and industrial networks, OS model, Ethernet and TCP/IP, Modbus, Foundation Fieldbus, DevicNet, PROFIBUS, AS-I, propriety buses protocols and interfaces, distributed I/O, drivers and devices and their implementation in P and PLC based systems.

9. Teaching and Learning Strategies

Strategy

- Theoretical lecturing.
- Group discussion.
- Report and presentation.
- Homework.

						_
Week	Hours	Required Learning	Unit or subject	Learning	Evaluation	
		Outcomes	name	method		
1-4	8	Understanding course introduction, Basic Elements of an Automated System, Levels of Automation, Process	Industrial Control Systems and Networking	Lecturing in class Group discussion	Quiz 1	

		T 1			
		Industries vs. Discrete			
		Manufacturing Industries,			
		Continuous Control, DCS			
		Systems, Networking: Process			
		Control, Supervisory Control,			
		enterprise Control			
5-6	4	Understanding TCP and UDP,	Industrial		
		Troubleshooting, Socket	Ethernet &	Lecturing in class	
		programming, Automation	TCP/IP	Group discussion	
		Trends, TCP/IP Based Factory	202722	Group discussion	
		Automation, Thin Servers,			
7.0	1	Network Security			02
7-8	4	Understanding topics	Ethernet IP	Lecturing in class	Quiz 2
		covered: ODVA, OSI reference		Group discussion	
		model, EtherNet/IP Terms &		or oup discussion	
		Definitions, Design of			
		Ethernet IP Networks, Web			
		Compatible SCADA Systems.			
9	2	Topics covered: Modbus	Modbus,	I acturing in along	Homework
		Overview, Modbus Protocol	Modbus Plus	Lecturing in class	
		Structure, Modbus Function	and Modbus	Group discussion	
		Codes, Troubleshooting,	TCP		
		Modbus Plus Technical			
		Overview			
10	2	Topics covered: CAN			Report
		Technical Overview,		Lecturing in class	assignment
		Application Layers, CANopen,	DeviceNet	Group discussion	
		DeviceNet Technical		Group discussion	
		Overview, ODVA,			
11	2	Topics covered: Reduced IOS			
11	~	reference model, AS-interface,	AS-I	Lecturing in class	
		Technical Overview, AS-i	Interface	Croup discussion	
		Applications, AS-i		Group discussion	
		Consortium, AS-i			
		Troubleshooting			
12	2				Quiz 3
12	2	Introduction to Profibus,	Profibus	Lecturing in class	Quiz 3
		Profibus-PA (Process			
		Automation), Profibus-DP		Group discussion	
		(Decentralized Periphery),			
		Network design and			
		configuration			
13-14	4	- Understanding different	Industrial	Lecturing in class	
		industrial IoT devices and	Wireless		
		differences between IoT and	Sensor	Group discussion	
		IIoT.	Network

Email: mayada.faris	s@uomosul.edu.iq						
8. Course Objectiv	/es						
Course Objectives	On successful completion of this course students will be						
	able to:						
	Identify the main terminologies of Network security						
such as C-I-A triad and cryptography							
	Recognize the impact that malicious exploits and						
	attacks have on network security						
	Comparing between different algorithms for						

- encryption and other services of network security
- Evaluating the level of protection through the value of the encryption work factor
- Analyzing the steps of encryption and decryption algorithms
- Describing the ways of implementing access control
- Describing the modes of IPSec security
- Listing IPSec protocols and describing their principles of operation
- Understanding the establishment of the security parameters via security association

9. Teaching and Learning Strategies

Strategy

The main strategy that will be adopted in delivering this subject is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering some sampling activities that are interesting to the students.

Week	Hours	Required	Unit or Subject		Evaluation
		Learning	Name	Learning	Method
		Outcomes		Method	
1	2	Identify the main	Introduction to	Theory	Exam
		terminologies of	Network Security		
		Network security			
2	2	Identify the main	The OSI Security	Theory	Exam
		terminologies of	Architecture		Quiz

		Network security			
3	2	Recognize the impact that malicious exploits and attacks have on network security	Authentication	Theory	Exam
4	2	Identify the main terminologies of Cryptography	Cryptography Principles	Theory	Exam
5	2	Evaluating the level of protection through the value of the encryption work factor	Work factor and Data Encryption Standard (DES) Part 1	Theory	Exam
6	2	Analyzing the steps encryption and decryption algorithms	Work factor and Data Encryption Standard (DES) Part 2	Theory	Exam Assignment
7	2	Analyzing the steps encryption and decryption algorithms	Advanced Encryption Standard (AES) Part 1	Theory	Exam
8	2		Term Exam 1	Theory
