## INTRODUCTION

The Department of Architecture at the Faculty of Engineering at Mosul University is an important engineering department that contributes to the community's provision of scientific and engineering expertise. Since its founding in 1978 and the commencement of the study in its corridors through a 45-year career to date, it has not failed in scientific giving and community service in various fields. Through the creation and development of experienced and competent engineering personnel capable of contributing actively to the development of society and advancing our country's progress in physical and related parts.

Graduates of the Faculty of Architectural Engineering at the University of Mosul have shown that they can take responsibility in various areas of reconstruction by contributing to the various reconstruction activities experienced in our country providing advice and scientific theory or applied expertise. It caters to the needs of society and helps public institutions expand and diversify their expertise.

The department focuses on a clear research curriculum and its academic curriculum with the aim of contributing to the revival of science and engineering courses. Desired national development as part of the approach of Mosul University and College of Engineering in achieving the goals of sustainable development in various areas of life.

In this context this guide aims to explain the admissions departments study approach and policy in a clear way when communicating with applicants to the Faculty of Engineering at the University of Mosul.

**2025-2026**

# Department of Architecture

## Department Management

**Assist. Prof. Dr. Omar Hazim Ahmed Kharofa**

- Head of Architecture Engineering Department
- Sustainable Architect

**Lect. Dr. Rana Mahfoodh Hamid**

- Coordinator of Architecture Engineering Department
- Urban Design

## Department Laboratories

### Computer lab 1

- **Laboratory Responsible (Engineer :Heba Essam)**

### Computer lab 2

- **Laboratory Responsible (Engineer Othman Auf, Engineer Steve Raad)**

# Department of Architecture

## **Vision:**

The Department of Architecture at the University of Mosul is a leading school of architecture that contributes to the cities sustainability by contributing to building a unique identity for the local urban environment by emulating local and international counterparts through its skills and expertise. Goals are achieved as part of being sexually targeted. The combination of originality and modernity Sustainable development based on ancient cultural heritage is pursued as a solid intellectual reference for urban sustainability and respect for international quality standards in accordance with modern scientific and technological developments.

## **Mission:**

The mission of the Department of Architecture is to complement the Faculty of Engineering and the University of Mosul by providing advanced higher education in various disciplines at all levels to produce more effective graduates who can contribute to the advancement of science. Community Economics and Science. Public: In addition to adhering to mental and professional ethical values Creating a stable environment for learning and intellectual creativity Respecting human rights Providing academic glide paths that contribute to the optimal use of environmental protection technologies and promoting the production of creative research is Providing the public with knowledge and technical advice Enhancing community institutions. Contributing actively to the community and providing building scientists capable of carrying out reconstruction work to the community and providing technical advice to meet community needs. On the one hand the adaptation of the city of Mosul and the development of Iraq with the times by preserving the cultural identity and values attached to the expression of ideas originating from the depths of the civilization of this ancient country. And the spirit and potential of the technology required. Moreover, we live in an era of technological revolution and technological progress is accelerating in various fields of life.

# Department of Architecture

## Goals:

The strategic goals of the Department of Architecture are aligned with the vision of the University of Mosul and the Faculty of Engineering with a focus on playing a leading role in the engineering education process and producing an experienced generation capable of taking on responsibilities in and outside Iraq. Strive to achieve the goal of sustainable national development by promoting community service through various educational means and promoting the desired progress of full national awakening through sound scientific research. This is achieved through:

1. Preparation of qualified personnel in various fields of knowledge as per high quality specifications.
2. Promote scientific research in theoretical and applied sciences to promote trends related to development programs monitor global scientific developments and project future trends.
3. Continued development of introductory and advanced courses in line with contemporary developments in methodology and technical understanding
4. Participation in community service by developing direct and continuous contact with national institutions for scientific advice and continuing education programs
5. Integrating architecture with various fields of engineering and building relationships with them as a basis for renaissance
6. Emphasize the role of architecture in building society and restoring the human environment.
7. Creation of a staff of architecture graduates and methods in accordance with scientific laws in the protection of heritage and inheritance in the field of architecture and urban planning in urban design and interior and Landscape design.
8. Implement a clear practical program focusing on sustainable technology details in line with developments in the developed world by providing a rules-based construction education program based on modern techniques in engineering and technology.
9. Focus on the quality of academic courses in architecture through ongoing renewal of specialization course selection and preparation of self-evaluation reports aimed at academic accreditation.
10. Strengthen the faculty of the Department of Architectural Engineering and increase the ratio of PhD degree holders compared to master's degree holders.

11. Interested in designing applied and applied scientific research projects to develop partnerships and relationships with recognized institutions and universities.
12. Support the departments mission by developing the skills and abilities of alumni developing continuing professional education and maintaining relationships with them.

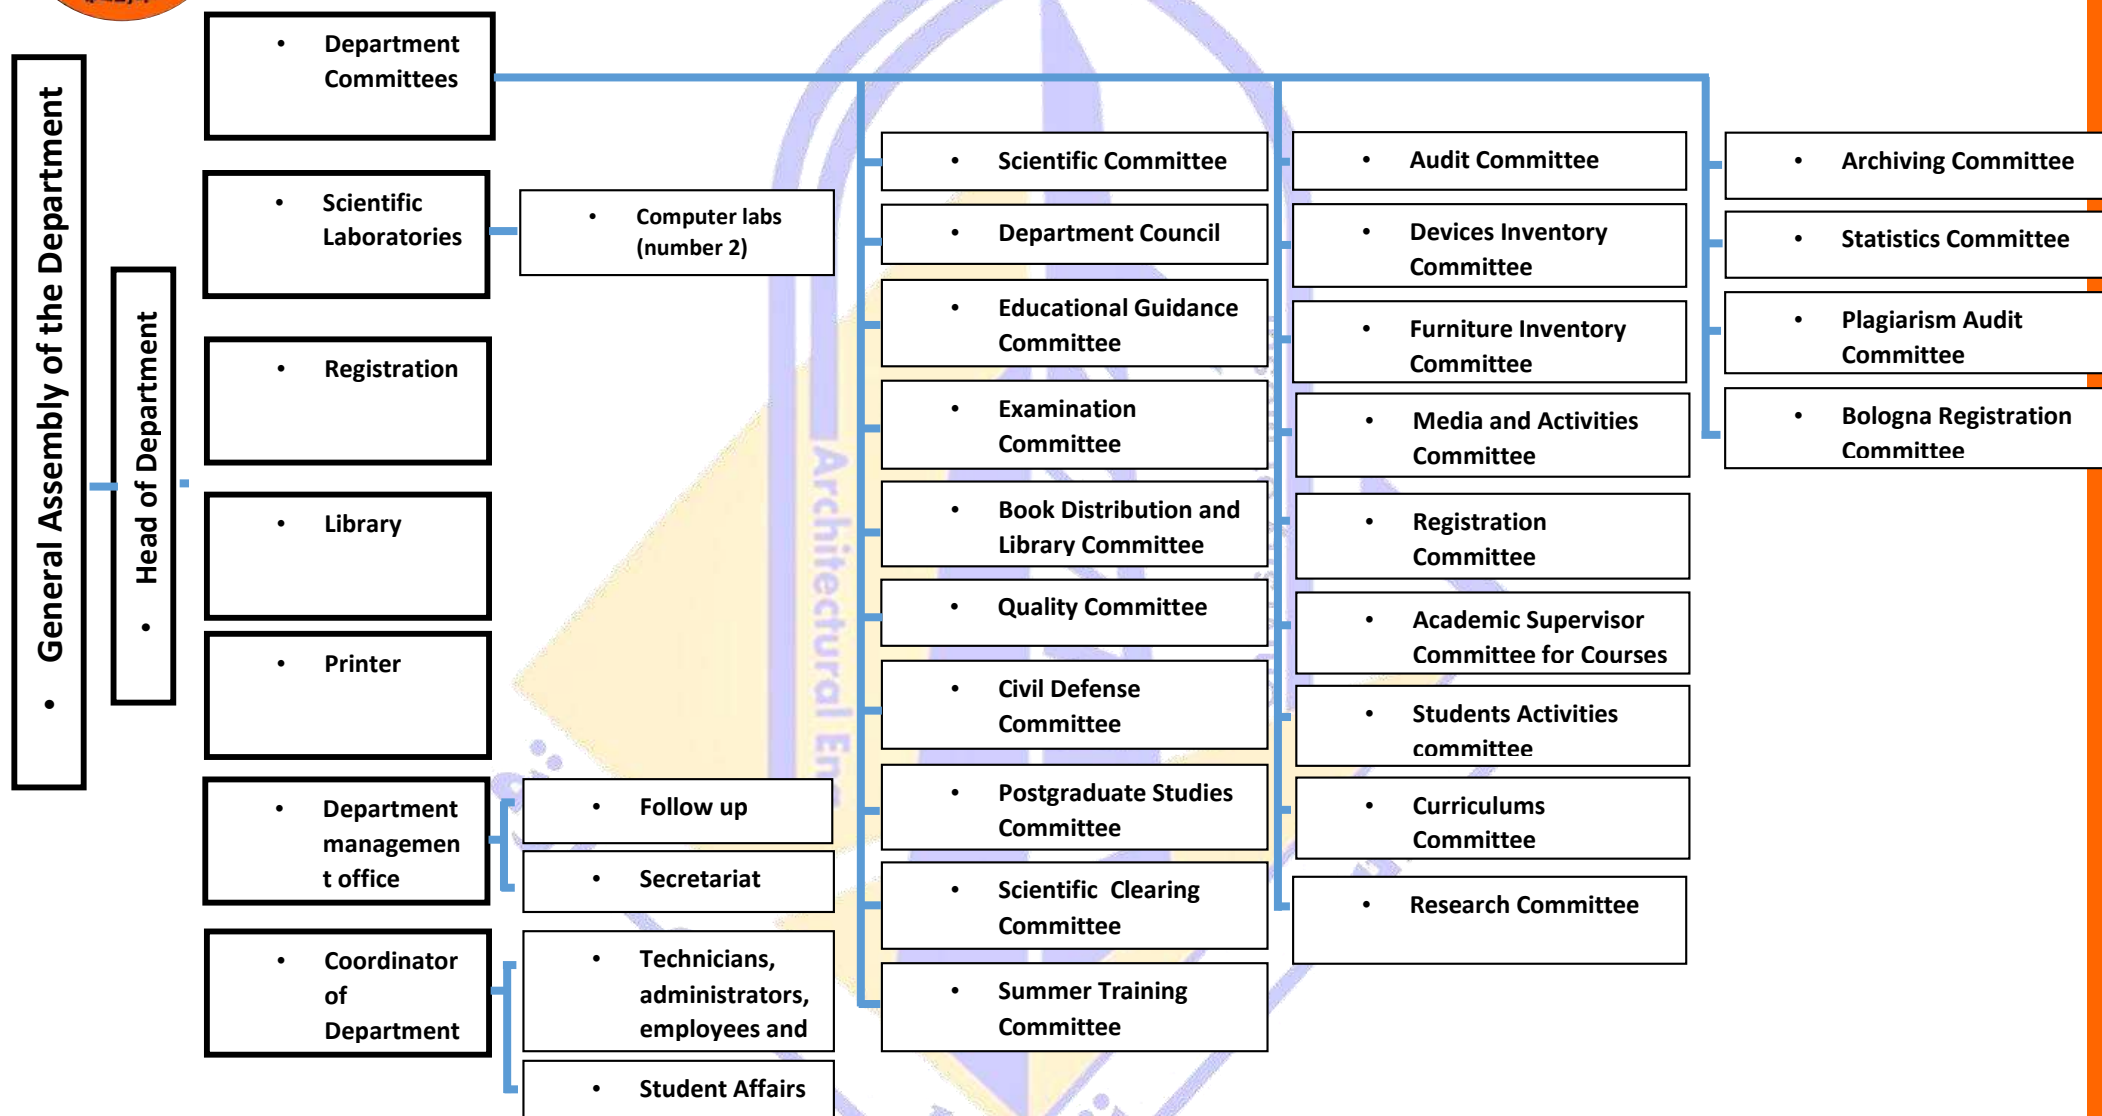

During the academic year students of the Faculty of Architectural Engineering prepare to practice engineering by acquiring knowledge and vocabulary from approved academic vocabulary to study architectural engineering related to various fields of knowledge as follows:

# Department of Architecture

# Department of Architecture

## Responsibilities

**Head of Department :** managing the department in terms of scientific, administrative, educational, cultural, financial, technical and student affairs, supervising the teaching process and teaching methods, preparing quarterly and annual scientific reports on the department's activities and submitting them to the dean, forming committees in the department, distributing duties to department members according to what the department's interests dictate, and issuing administrative orders to that effect.

**Department Coordinator:** Distributing lessons to faculty members, following up on student absences, daily status of student absences, following up on scientific seminars in the department.

**Department Council:** The Council participates with the Department Head in supervising the progress of the educational process and the progress of work in the department and following up on the implementation of the scientific plan and the plan to develop the academic and educational administrative cadres.

**Scientific Committee and Postgraduate Studies Committee:** The committee participates with the head of the department in all scientific decisions related to curricula and their development, reviewing academic promotions for faculty members, and obtaining research and assignments. It also deals with everything related to postgraduate students, from determining the admission examination committee for studies, preparing student discussion committees, considering postgraduate students' extension requests, naming the professor supervising the postgraduate student, and the comprehensive examination for students.

# Department of Architecture

**Quality Committee:** Disseminating the culture of quality and supporting related activities by applying quality standards in all aspects of work to improve the outcomes of the educational and pedagogical process. As well as supervising academic evaluation and accreditation activities, supporting continuous improvement and development of quality, following up on the preparation of descriptions and reports of the academic department's programs. Following up on the preparation of descriptions and reports of academic courses, and statistics in the department. Carrying out other tasks assigned to the unit in relation to quality and its application.

**Examination Committee:** Taking care of following up on the semester, mid-year and final exams for students, organizing the supervision schedules and distributing supervisors to the halls, receiving the exam questions and exam results from the instructors and working on organizing them and maintaining their confidentiality, conducting statistics on the final results and determining the success rates and failure rates for the students taking the exams, while following up on organizing the exam process for the students taking the supplementary exams.

**Audit Committee:** Its work coincides with the work of the examination committee in the department during examinations and the announcement of results, as its members audit the grades received from the instructors and the grades recorded on the grade cards and audit the examination results before announcing them to the students.

**Graduation Projects Committee:** Taking suggestions from lecturers regarding graduation projects. After organizing and presenting them to students, students are selected for the projects. The project is approved based on several criteria, and then announced to the students. This is followed up on and committees are formed to discuss the graduation projects.

# Department of Architecture

**Continuing Education and Seminars Committee:** Follows up on the continuing education courses conducted by the department's instructors for engineering staffs in the governorate's various departments, and the seminars and conferences held by the department.

**Guidance Committee:** Meeting with students to identify the problems and obstacles that students encounter from an academic perspective and preparing a report on that.

**Summer Training Committee:** Preparing official books for third-stage student training in government departments, following up on students, and receiving reports on students who have completed training.

**Media Committee:** Concerned with covering the various scientific and social events held by the department through photos and explanatory publications.

**Book Distribution Committee:** Distributing books to students at the beginning of the academic year and receiving books at the end of the year, organizing lists of books borrowed by faculty, staff and all postgraduate students.

**Schedules Committee:** The members of this committee prepare the lecture schedules for undergraduate and postgraduate students for the two semesters of each academic year.

**Archiving Committee:** It electronically archives completed master's and doctoral theses in all specializations in the department, in addition to graduation projects for higher diploma students in all branches and fourth-year students.

# Department of Architecture

**Inventory Committee:** Inventory of furniture and equipment available in all department rooms and laboratories.

**Social Solidarity Committee:** Follows up on the social cases of the department's students and also members who have an economic or social situation that requires assistance.

**Registration Committee:** Receives and registers new students at the beginning of each new academic year, and also registers students' direct enrollment for all academic levels, while following up on students' cases during the academic year, including transfer, hosting, postponement, etc., and preparing lists of students for all levels and according to the classrooms.

**Department Management Office:** Registering incoming official letters, then distributing outgoing mail from the department head and recording who distributed the mail, exporting official letters, following up on unanswered official letters, organizing incoming and outgoing letters in files that are easy to search.

**Printer:** Printing official books, recording daily absences, issuing a monthly schedule of student absence rates, receiving e-mail and sending it to the department's management office.

**Library:** Receiving master's theses electronically and in paper form from recently graduated students, organizing work in borrowing master's theses and books, as well as scientific laser discs for programs.

# Department of Architecture

## Department Building

The Architectural Engineering Department of Mosul University is one of the eight scientific departments of the Faculty of Engineering established and started in 1978-1979 and the first group of the department graduated in 1982-1983 with a 5-year study period. Higher studies of the department started in 1996-1997 with the inauguration of Masters degree and continued till the current year 2023-2024. In addition to the scientific and educational activity of the department it actively contributes to the realization of a large number of projects and construction projects in the city of Mosul and beyond by providing consultancy in other fields at the university level and abroad. The department has also participated in numerous local architecture competitions and international seminars. In the academic year 2023-2024 the department now has a teaching staff of 58 people to cover micro-disciplines in the disciplines of architectural engineering including some engineers. And the department continues to provide its services through modern laboratories and events that meet the needs of students through a new department building last year under the supervision of the staff and the dean of the engineering faculty and the dean of Mosul University.

Faculty Lounge	1	82
Service Spaces	4	94
Restrooms	13	180
Faculty Offices	25	628

# Department of Architecture

## Department Laboratories

The Architecture Engineering Department has two computer laboratories that are used for undergraduate students (first, second, third, and fourth).

### Computer Lab 1

A laboratory with a capacity of 35 students, containing 10 laptops, and dedicated to giving the following lectures:

1. The first stage - computer basics.
2. The second stage - architectural drawing by computer.
3. The third stage - architectural rendering by computer.
4. The fourth stage - integration of engineering systems.

However, the number of computers is insufficient compared to the number of students, so we rely on students' personal computers for applications.

## Computer Lab 2

The laboratory has a capacity of 40 students, but it lacks computers and relies on students' personal computers for applications. It is dedicated to giving the following lectures:

1. The first stage - computer basics.
2. The second stage - architectural drawing by computer.
3. The third stage - architectural rendering by computer.
4. The fourth stage - integration of engineering systems.

# Department of Architecture

## Research Directions/Aspects Considered in Department of Architecture Engineering

**The main research lines in Architecture Engineering are:**

### **Architectural Design:**

- A Process-Centered Research such as: Design Methodologies, Design Strategies, Design techniques, Digital Design, etc.
- A Designer or User-Centered Research such as: Design Thinking, Creativity and Cognition, etc.
- A Building-Centered Research such as: Building Typologies, Post-occupancy Evaluation Studies, etc.
- Design Education Research.

### **History and Theory of architecture:**

- Researches Approach in Theory of Architecture Deals with many topics; Changing Theories according to Architectural approaches that appeared in Architectural discourse during the last two centuries, the formal phenomena as a reflection of recent movements, the evolution of practicing Architecture, and identifying the causes, nature and pattern of these changes.
- The research on history and theory of architecture includes a wide range of fields related to architecture and its design and planning characteristics within ancient, historical, Islamic and contemporary periods and eras.

# Department of Architecture

It deals with all types of buildings, their styles, components, space organization, shapes of plans, and the relationship between Form and function, all aspects related to construction, and the quality of building materials and construction systems used, the nature and types of decoration and ornamentation, as well as the study of interior designs, outdoor spaces, and landscapes designs, and intellectual concepts reflected in the designs of each architectural period.

## Landscape architecture:

- Research in Landscape architecture involves the design, planning, management, and nurturing of the built and natural environments. Planting design, Landscape Ecology, Landscape Archaeology, Cultural Landscape, green infra structure, Urban open space.

## Interior architecture:

- Research in the theoretical aspects placed in interior design, what distinguishes interior design theory from architecture theory or design theory? Defining contemporary positions in interior design theory.
- Interior design research related to feminine materials or finishing and furniture materials, and what are their characteristics of those elements in the reflection of the spirit of the place and the identity of the space?
- Research in the theoretical frameworks of adaptation in interior design within the types of buildings that require little or limited structural changes to the current building.

# Department of Architecture

- Research in sustainability interior design, interior design is a multidisciplinary practice concerned with creating a set of interior environments that express the identity and spirit of a place through the manipulation of spatial size, and the placement of specific elements, such as furniture and surface treatment.
- Research in the internal architectural elements that affect human psychology and knowledge of behavior, and the level of awareness of the importance of this relationship is the primary preliminary factor, such as identity, privacy, safety impacts, health concerns, degree of accessibility.

## Sustainable architecture:

- Study architecture that continues through time and extends for the longest possible period with an increase in the life span of the building at all levels, functionally and structurally.
- Reducing the use and waste of energy and other resources, with the necessity to make optimal use of what is available from them and build a healthy environment inside and outside the buildings according to correct considerations
- Recycling of materials and making use of self-help methods in building construction while preserving the aesthetics of the building from the inside and outside visually and functionally.
- Keeping up with technology and taking advantage of its opportunity
- Create a new generation of environmentally friendly and environmentally friendly buildings.

# Department of Architecture

## Urban design:

- The scientific approach covers theoretical studies that reflect different worldwide experiences, whether within the historical or modern urban fabric, their methods and techniques of dealing with them. While scientific studies work on utilizing the results of the basic theoretical topics in applied research to resolve specific real problems and by employing mechanisms, technologies and software specialized in this field, with seeking to develop the researcher's professional training skills.

## Housing and Urban Planning:

- This scientific approach deals in housing with research in the basic characteristics of local housing design, both in its theoretical aspect concerned with the structural, functional and formal properties of local housing and its contemporary development as an expressive part of the contemporary life cultural identity of the local community at the level of Iraq and the city, or in its practical aspect, which deals with the mechanisms of developing and evaluating the housing design reality locally within the fields that meet the various basic needs of housing and residents by appropriate employment of economic, social, psychological and environmental influences that drive residential design.
- In urban planning, researches focuses on the local planning characteristics, whether in their traditional characteristics or in their contemporary development within the various planning elements and components of the city.
