Academic Program and Course Description Guide

2026-2025

Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (yearly, semesters), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

Concepts and terminology:

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

Course Description: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

Program Vision: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

Program Mission: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

Program Objectives: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

Curriculum Structure: All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

Teaching and learning strategies: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

Academic Program Description Form

University Name: Mosul University

Faculty/Institute: College of Engineering

Scientific Department: Electrical Engineering

Academic or Professional Program Name: Electrical Engineering /
Power and Machines

Final Certificate Name: BSc. of science in Electrical Engineering /
Power and Machines

Academic System: Course System + Bologna Process

1 .Program Vision

To be distinguished in education research and community service in the field of electrical engineering.

2 .Program Mission

To provide a high-quality educational program that offers depth in the area of specialization while ensuring a strong foundation in engineering principles, to disseminate and advance engineering knowledge, and to serve industry and the wider community through academic and professional engagement.

3 .Program Objectives

1. Preparing efficient engineering staff in the field of power and Machines engineering, and power & machine engineering, as well as preparing specialized engineering staff with postgraduate degree and in the same field above in order to contribute to the comprehensive development and urban renaissance in the country.
2. Contribute to the provision of academic, scientific, practical and applied services and consultants to all sectors of the state, public, mixed and private, through cooperation agreements, as well as through consultancy bureau of College of Engineering.
3. Preparing research that works and contributes to solving engineering and industrial problems and obstacles facing industrial establishments and projects in the country.
4. Contribute to the dissemination and development of engineering knowledge and the transfer of the latest developments in the fields of electrical and electronic engineering to engineers in various fields of work through the establishment of continuing education courses and training courses, as well as through the publication of scientific research in specialized local and international scientific journals.
5. Development of academic staff by sending them in delegate scientific participation in conferences, seminars or joint workshops with Arab and international institutions and global or as well as by granting licenses to full -time work at universities outside the country, which helps in the exchange and development of expertise.
6. Participation in organizing and holding of conferences, seminars, workshops and scientific discussions inside and outside the country.

4 .Program Accreditation

The Program is under review by the National Council for Accreditation of Engineering Education (ICAEE)

5 .Other external influences

None

6 .Program Structure

Program Structure	Number of Courses	Credit hours	Percentage	Reviews*
Institution Requirements	8	16	7.2 %	
College Requirements	6	36	16.3 %	
Department Requirements	46	168	76.5 %	
Summer Training	1	None		
Other				

* This can include notes whether the course is basic or optional.

7 .Program Description

First Level

Semester 1 | 30 ECTS | 1 ECTS = 25 hrs

Code	Module	SSWL	USSWL	ECTS	Type	Pre-request
EE101	Basics of Electrical Engineering I	93	107	8.00	C	----
EE102	Mathematics I	63	87	6.00	B	----
EE103	Engineering drawing	63	37	4.00	S	----
EE104	Physics I	33	67	4.00	B	----
EE105	Mechanics Engineering	33	42	3.00	S	----
UOM1031	Computer 1	63	12	3.00	B	----
UOM1011	Arabic Language 1	33	17	2.00	B	----

Semester 2 | 30 ECTS | 1 ECTS = 25 hrs

Code	Module	SSWL	USSWL	ECTS	Type	Pre-request
EE108	Basics of Electrical Engineering II	93	107	8.00	C	----
EE109	Mathematics II	63	87	6.00	B	----
EE110	Computer Programming	63	87	6.00	B	----
EE111	Digital Techniques	48	27	3.00	C	----
EE112	Physics II	48	27	3.00	B	----
UOM1040	Democracy and Human Rights	33	17	2.00	B	----
UOM1021	English Language 1	33	17	2.00	B	----

Second Level

Semester 3 | 30 ECTS | 1 ECTS = 25 hrs

Code	Module	SSWL	USSWL	ECTS	Type	Pre-request
EEPM201	Electrical Circuits Analysis I	93	32	5.00	C	----
EEPM202	Mathematics III	78	47	5.00	B	----
EEPM203	Electromagnetic Fields	63	37	4.00	C	----
EEPM204	Electrical Transformers	63	62	5.00	C	----
EEPM205	Electronics Principles	48	52	4.00	B	----
EEPM206	Electrical Engineering Lab. I	33	42	3.00	C	----
UOM2050	The crimes of the Baath regime in Iraq	33	17	2.00	B	----
UOM2012	Arabic Language 2	33	17	2.00	B	----

Semester 4 | 30 ECTS | 1 ECTS = 25 hrs

Code	Module	SSWL	USSWL	ECTS	Type	Pre-request
EEPM208	Electrical Circuits Analysis II	93	32	5.00	C	----
EEPM209	Mathematics IV	78	47	5.00	B	----
EEPM210	DC Machines	63	62	5.00	C	----
EEPM211	Distribution Systems	63	62	5.00	B	----
EEPM212	Renewable Energies sciences	33	17	2.00	C	----
EEPM213	Electrical Engineering Lab. II	33	42	3.00	C	----
UOM2022	English language 2	33	17	2.00	B	----
UOM2032	Computer 2	63	12	3.00	B	----

Third Level

Semester 5 | 30 ECTS | 1 ECTS = 25 hrs

Code	Module	SSWL	USSWL	ECTS	Type	Pre-request
EEPM301	Mathematical Analysis	63	37	4.00	B	----
EEPM302	Transmission Systems	78	72	6.00	C	----
EEPM303	AC Machines	78	72	6.00	C	----
EEPM304	Electrical Measurements	63	37	4.00	B	----
EEPM305	Power Electronics I	63	87	6.00	C	----
EEPM306	Power and Machines Lab. I	63	37	4.00	C	----

Semester 6 | 30 ECTS | 1 ECTS = 25 hrs

Code	Module	SSWL	USSWL	ECTS	Type	Pre-request
EEPM307	Numerical Analysis	63	37	4.00	B	----
EEPM308	Generation Systems	63	62	5.00	C	----
EEPM309	Electrical Machines Drives	78	47	5.00	C	----
EEPM310	Power Electronics II	63	87	6.00	C	----
EEPM311	Programmable controllers	33	17	2.00	C	----
EEPM312	Power and Machines Lab. II	63	37	4.00	C	----
EEPM313	Engineering Project Design & Planning	33	17	2.00	C	
EEPM314	English language 3	33	17	2.00	S	----

Four Level

Code	Module	Theoretical	Practical	Applied	Units
EEP 407	Control systems I	2		1	3
EEP 401	Power System Analysis I	2		1	3
EEP 402	Power System Protection I	2		1	2
EEP 404	High Voltage Engineering I	2		1	2
EEP 403	Special Electrical Machines I	2			3
EEP 406	Electrical Power Generation Stations (Elective Subject)	2		1	2
EEP 408	Power and Machines Lab. III		4		2

Code	Module	Theoretical	Practical	Applied	Units
EEP 417	Control systems II	2		2	3
EEP 411	Power System Analysis II	2		1	3
EEP 412	Power System Protection II	2		1	2
EEP 414	High Voltage Engineering II	2			2
EEP 413	Special Electrical Machines II	2		1	3
EEP 418	Power and Machines Lab. IV		4		2
EEP 415	Graduation Project	2		1	2
EEC 420	Physics III	3			3
EEC 421	Chemistry	3			3

7. Expected learning outcomes of the program

Graduate Outcomes (GOs) for engineering from ICAEE,

1. An ability to distinguish, identify, define, formulate, and solve Power and Machines engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to produce engineering designs that meet desired needs within certain constraints by applying both analysis and synthesis in the design process.
3. An ability to create and carry out proper measurements and tests with quality assurance, analyze and interpret results, and utilize engineering judgment to make inferences.
4. An ability to skillfully communicate orally with a gathering of people and in writing with various managerial levels.
5. An ability to perceive ethical and professional responsibilities in engineering cases and make brilliant judgments, taking into account the consequences in worldwide financial, ecological, and societal considerations.
6. An ability to perceive the continual necessity for professional knowledge growth and how to find, assess, assemble, and apply it properly.
7. An ability to work adequately on teams and to set up objectives, plan activities, meet due dates, and manage risk and uncertainty.

Knowledge

Learning Outcomes (A)	Learning Outcome (GO 1) : An ability to distinguish, identify, define, formulate, and solve Power and Machines engineering problems by applying principles of engineering, science, and mathematics. Learning Outcome (GO 2) : An ability to produce engineering designs that meet desired needs within certain constraints by applying both analysis and synthesis in the design process. Learning Outcome (GO 3) : An ability to create and carry out proper measurements and tests with quality assurance, analyze and interpret results, and utilize engineering judgment to make inferences. Learning Outcome (GO 6) : An ability to perceive the continual necessity for professional knowledge growth and how to find, assess, assemble, and apply it properly.
-----------------------	--

Skills

Learning Outcomes (B)	Learning Outcome (GO 4) : An ability to skillfully communicate orally with a gathering of people and in writing with various managerial levels. Learning Outcome (GO 7) : An ability to work adequately on teams and to set up objectives, plan activities, meet due dates, and manage risk and uncertainty.
-----------------------	--

Ethics

Learning Outcomes (C)	Learning Outcome (GO 5) : An ability to perceive ethical and professional responsibilities in engineering cases and make brilliant judgments, taking into account the consequences in worldwide financial, ecological, and societal considerations.
-----------------------	---

8. Teaching and Learning Strategies

- Power point lectures
- Whiteboard Lectures
- Tutorial
- Laboratory experiments
- Computer laboratories

- Video lectures
- Team works
- Case Studies
- On-line lectures

10. Evaluation methods

- Mid-Term and Final exams
- Quizzes
- Technical Reports and Projects
- Laboratory Reports and Exams

11. Faculty

Faculty Members

Academic Rank	Specialization		Special Requirements /Skills (if applicable)		Number of the teaching staff	
	General	Special			Staff	Lecturer
Professor	Electronics and Communications	Solid state Eng.			1	
Professor	Power and Machines	Power and Machines			2	
Professor	Power and Machines	Power Electronics			1	
Assist. Professor	Power and Machines	Automatic Control			1	
Assist. Professor	Electronics and Communications	Communication Engineering			2	
Assist. Professor	Power and Machines	Power Electronics			3	
Assist. Professor	Power and Machines	Power Eng.			2	
Assist. Professor	Power and Machines	Power and Machines			1	
Assist. Professor	Electronics and Communications	Nanotechnology			1	
Lecturer	Electronics and Communications	Communication Engineering			3	
Lecturer	Power and Machines	Power Eng.			9	
Lecturer	Power and Machines	Protection Eng.			1	
Lecturer	Electronics and Communications	Electronics			5	
Lecturer	Electronics and Communications	Computer Network			1	

Assist. Lecturer	Electronics and Communications	Electronics and Communications			2	
Assist. Lecturer	Power and Machines Engineering	Power and Machines Engineering			5	
Assist. Lecturer	Electrical Power Stations and Systems	Electrical Power Stations and Systems			1	
Assist. Lecturer	Electronics and Communications	Electronics and Communications			1	

Professional Development

Mentoring new faculty members

The academic program is designed to comprehensively enhance the knowledge and skills of new faculty members across various educational fields. It begins by focusing on equipping faculty with the fundamental ability to effectively manage their courses. It then progresses to encompass the processes and procedures necessary to ensure the successful achievement of targeted learning outcomes in diverse programs.

To achieve these goals, the program includes the following key components:

1. **Educational Courses:** New faculty members participate in educational courses aimed at improving the quality of the educational learning process. These courses cover a range of topics, including:
 - **Training on Teaching Methods:** Instruction on effective strategies for engaging students and delivering course content.
 - **Designing Course Outlines:** Guidance on structuring and organizing course materials to optimize student learning.
 - **Modern Trends in University Teaching:** Exploration of innovative approaches to teaching and learning in higher education.
 - **Evaluating Student Learning:** Techniques for assessing student performance and understanding.
 - **Preparing Tests:** Strategies for creating fair and rigorous assessments.
 - **University Policies:** Familiarization with relevant laws, regulations, instructions, and e-learning platforms.
2. **Continuous Evaluation:** Faculty members, both full-time and part-time, undergo continuous evaluation to identify areas for development throughout their educational careers. This process helps ensure that faculty are continually improving and adapting to meet the evolving needs of students and the university.
3. **Professional Development Opportunities:** Faculty members are encouraged to participate in teaching staff development courses offered by the department or the university's continuing education unit. These courses provide

opportunities for faculty to enhance their skills, stay current with trends in education, and collaborate with colleagues.

12. Acceptance Criterion

To be eligible for admission to the Electrical Engineering Department at the undergraduate level, applicants must meet certain requirements. The admissions process is overseen by the Ministry of Higher Education and Scientific Research, which electronically manages and allocates student admissions to government institutions and faculties based on their secondary school grades. Here are some of the key requirements for student acceptance:

- ✓ Academic accreditation/64
- ✓ Scientific publications/64
- ✓ Academic accreditation/3
- A- Iraqi Nationality and Year of Birth: Applicants must hold Iraqi nationality and be born in 1999 or later.
- ✓ Miscellaneous seminars in the Renewable energy sources and technologies/50
- ✓ Participation in conferences, seminars, workshops, and training courses outside Iraq/1
- B- Iraqi Secondary School Certificate: Applicants need to possess a certificate issued by an Iraqi secondary school that is authorized by the Ministry of Education.
- ✓ Participation in conferences, seminars, workshops, and training courses inside Iraq/20
- C- Medical Certificate: Applicants must provide a medical certificate to demonstrate that they meet the necessary health requirements.

The faculty members actively participate in various workshops and training courses, dedicating their time, quality, and research studies in the department. In the academic years, 15 faculty members presented a total skills development (22 workshops/20 continuous education courses). The department encourages faculty members to attend conferences, seminars, workshops, and training courses for professional development.

- H- Acceptance of talented students.
- I- Admission 10% of the top graduates of technical institutes.

13. The most important sources of information about the program

Guidebook for Mosul University The departmental website:

<https://uomosul.edu.iq/en/engineering/electrical-engineering-dept/>

14. Program Development Plan

To enhance the quality of education, elevate graduate outcomes, and meet the competencies required by increasingly complex societies, the department council has decided to adopt the "Bologna process system of Education." This system incorporates the European Credit Transfer and Accumulation System (ECTS) instead of the traditional course-based system, aligning with the department's commitment to continuous improvement. The new system will be implemented starting in the academic year 2025-2026.

The adoption of the Bologna process is expected to yield several benefits:

- **Student-Centered Learning:** The system places students at the core of the learning process, enhancing the overall education system.
- **Increased Class Interaction:** The constant engagement between teachers and students promotes a more dynamic learning environment.
- **Focus on Professional and Practical Skills:** Emphasis is placed on acquiring practical skills relevant to professional development.
- **Opportunity for Continuous Learning:** Students will have the opportunity for ongoing learning, assessment, and feedback.
- **Biannual Performance Evaluation:** The system allows for the evaluation of student performance twice a year, providing more comprehensive feedback.
- **Enhanced Subject Understanding:** The system is expected to facilitate a deeper understanding of subjects among students.

Prerequisite module	None	Semester	
Co-requisites module	None	Semester	
Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
	1. To develop problem solving skills and understanding of DC circuit		

Module Aims أهداف المادة الدراسية	theory through the application of techniques. - To understand voltage, current and power from a given DC circuit. - This course deals with the basic concept of DC electrical circuits. - This is the basic subject for all DC electrical and electronic circuits. - To understand Kirchhoff's current and voltage Laws problems. - To perform mesh and Nodal analysis. - To perform Thevenin and superposition theory.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	- Recognize how electricity works in electrical circuits. - List the various terms associated with electrical circuits. - Summarize what is meant by a basic electric circuit. - Describe electrical voltage, current and power. - Define Ohm's law. - Identify the basic circuit passive and active elements and their applications. - Discuss the various properties of resistors. - Explain the two Kirchhoff's laws used in circuit analysis. - Explain the Analysis Methods used in Electrical Circuits.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - Circuit Components and values</u> DC circuits, Current and voltage definitions, Passive sign convention and circuit elements, Resistive networks, real and ideal elements, voltage and current sources. [9 hrs.] Lab. [6 hrs.] Revision problem and tutorial classes [6 hrs.] Quizzes [1 hr.] <u>Part B- Circuit reduction</u> combining sources, Combining resistive elements in series and parallel, delta and star transformation. [12 hrs.] Revision problem and tutorial classes [8 hrs.] Lab. [8 hrs.] Quizzes [1 hr.]
	<u>Part C- Circuit Theory</u> Kirchhoff's laws and Ohm's law. Introduction to mesh and nodal analysis, Introduction to Thevenin and Norton theory, maximum power transfer, introduction to superposition theory. [24 hrs.] Revision problem and tutorial classes [16 hrs.]

	Lab. [16 hrs.]
	Quizzes [1 hr.]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.
-------------------	--

Student Workload (SWL)

الحمل الدراسي للطالب محسوب لـ ١٥ اسبوعا

Structured SWL (h/sem) الحمل الدراسي المنتظم للطالب خلال الفصل	123	Structured SWL (h/w) الحمل الدراسي المنتظم للاطالاب أسبوعيا	8
Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطالب خلال الفصل	77	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للاطالاب أسبوعيا	5
Total SWL (h/sem) الحمل الدراسي الكلي للطالب خلال الفصل	200		

Module Evaluation

تقييم المادة الدراسية

		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	1	10% (10)	4,8,12	LO #1, 5, 8 and 9
	Assignments	10	5% (5)	2 to 12	LO #1, 2, 4, 6 7, 8 and 9
	Lab.	2	30% (12)	Continuous	All
	Report	0	0% (0)	----	----

Summative assessment	Midterm Exam	2 hr.	10% (10)	7	LO # 1-5
	Final Exam	3hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Basic Concept & Units: Electricity & atomic structure of substance, current and current density, current flow, electric circuit, E.M. F& potential difference
Week 2	international system of unit, abbreviation for multiples & sub-multiples, quantities derived from SI units, units of force-energy-torque and power, relation between energy and heat, electric units, efficiency & percentage efficiency, electromechanical equivalent of element
Week 3	Ohm's law, resistivity & conductivity
Week 4	temperature affect, internal resistance of a source, open circuit & short circuit
Week 5	equivalent resistance: Series-parallel-circulating current method-floating source method & grouping of E.M.F. sources, double subscript
Week 6	power calculation in D.C circuit
Week 7	Kirchhoff's laws: KVL-KCL
Week 8	Mid-term Exam
Week 9	introduction to network theorems, types of source: independent and dependent voltage and current sources and their transformation
Week 10	Maxwell's circulating currents (mesh analysis)
Week 11	nodal analysis
Week 12	superposition theorem
Week 13	Thevenin's theorem and Norton's theorem
Week 14	maximum power transfer theorem
Week 15	millman theorem, substitution theorem and reciprocity theorem

Week 16	Preparatory week before the final Exam
----------------	---

Delivery Plan (Weekly Lab. Syllabus)		
المنهاج الاسبوعي للمختبر		
	Material Covered	
Week 1	Lab 1: Introduction to lab. components	
Week 2	Lab 2: Introduction to AVO meter (analog and digital)	
Week 3	Lab 3: Introduction to resistance measurements (practical and color code)	
Week 4	Lab 4: resistance temperature affect, internal resistance of a source, open circuit & short circuit	
Week 5	Lab 5: ohm’s Law	
Week 6	Lab 6: series and parallel resistance	
Week 7	Lab 7: resistance delta and star transformation	
Week 8	Lab 8: Kirchhoff's Voltage Law	
Week 9	Lab 9: Kirchhoff's Current Law	
Week 10	Lab 10: implementation of Maxwell’s circulating currents (mesh analysis)	
Week 11	Lab 11: implementation of Nodal analysis	
Week 12	Lab 12: implementation of Superposition theorem	
Week 13	Lab 13: implementation of Thevenin’s / Norton's Theorem	
Week 14	Lab 14: implementation of maximum power transfer theorem	
Week 15	Lab 15: DC power measurements (methods and instrumentations)

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX - Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F - Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	8. Student be able to solve simultaneous linear equations and inequalities involving the square root and modulus function. 9. know addition and double-angle formulas for trigonometric functions and use them to express values of trigonometric functions in the surds form. 10. Student be able to recognize odd, even, periodic, increasing, decreasing functions. 11. understand the operation of composition of functions and the concept of functional inverse. 12. recognize linear, quadratic, power, polynomial, algebraic, rational, trigonometric, exponential, hyperbolic and logarithmic functions and sketch their graphs. 13. be able to calculate limits by substitution and by eliminating zero denominators. 14. know derivatives of power, trigonometric, exponential, hyperbolic, logarithmic and inverse trigonometric functions. 15. know the basic rules of differentiation and use them to find derivatives of products and quotients. 16. know the chain rule and use it to find derivatives of composite functions.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	On completion of this course students will be expected to 10. be able to solve algebraic equations and inequalities involving the square root and modulus function. 11. understand the difference between equations and identities, and be able to prove simple identities and inequalities. 12. know addition and double-angle formulas for trigonometric functions and use them to express values of trigonometric functions in the surds form. 13. be able to recognize odd, even, periodic, increasing, decreasing functions. 14. understand the operation of composition of functions and the concept of functional inverse. 15. to able to recognize linear, quadratic, power, polynomial, algebraic, rational, trigonometric, exponential, hyperbolic and logarithmic functions and sketch their graphs.
	trigonometric, exponential, hyperbolic and logarithmic functions and sketch their graphs.

	16. be able to calculate limits by substitution and by eliminating zero denominators. 17. be able to calculate limits at infinity of rational functions. 18. know derivatives of power, trigonometric, exponential, hyperbolic, logarithmic and inverse trigonometric functions. 19. know the basic rules of differentiation and use them to find derivatives of products and quotients. 20. know the chain rule and use it to find derivatives of composite functions.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A – Matrices</u> Basic Definitions, Addition, Subtraction and Multiplication, Determinants, The Inverse of a 3 x 3 Matrix, Cramers Rule, Solve equations by Matrices: Gaussian Elimination. the method of finding the inverse of a square matrix, solution of simultaneous linear equations by matrix method. [8 hrs.] Revision problem and tutorial classes [2 hrs.] Quizzes [1 hr.] <u>Part B - Coordinates and Graphs in the Plane</u> Directions and Quadrants, Distance between Points, Graphs of Equations, Intercepts and More about Graphing, Slope and Equations for Lines: Slope of Non-vertical Lines, Lines that are Parallel or Perpendicular, Point – Slope Equations, Slope – Intercept Equations, Functions and their Graphs, Domains and Ranges are Often Intervals, Even Functions and Odd Functions, Functions Defined in Pieces, Shifts, Circles, and Parabolas: How to Shift a Graph, Equations for Circles in the Plane, Equations for Parabolas, A Review of Trigonometric Functions: Radian Measure, The Six Basic Trigonometric Functions, Calculating Sines and Cosines, Graphs of Trigonometric Functions, Limits and Continuity: Limits, Examples of Limits, The Sandwich Theorem and $(\frac{0}{0})$, Limits Involving Infinity, Continuous Functions.. [14 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [2 hr.] <u>Part C- Derivatives</u> Slopes, Tangent Lines, and Derivatives, Defining Slopes and Tangent Lines, The Derivative of a function, The Slope of Lines, Differentiation Rules: Integer Powers, Multiples, Sums, and Differences, Second and Higher Order Derivatives, Negative Integer Powers of x, Velocity,
	Speed, and Other Rate of Change: Velocity, Speed, Acceleration, Derivatives of Trigonometric Functions: The Derivative of the Sine, The Derivative of the Cosine, The Derivative of the Other

	Basic Functions, The Chain Rule: Integer Powers of Differentiable Functions, Derivative Formulas that Include the Chain Rule, Implicit Differentiation and Fractional Powers: Lenses, Tangents, and Normal Lines, Using Implicit Differentiation to Find Derivatives of Higher Order, Fractional Powers of Differentiable Functions, Linear Approximations and Differentials. [24 hrs.] Revision problem and tutorial classes [6 hrs.] Quizzes [2 hr.]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Total SWL (h/sem) الحمل الدراسي الكلي للطالب خلال الفصل	150		

Module Evaluation

تقييم المادة الدراسية

		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative	Quizzes	3	15% (15)	4,8,12	LO #2, 5, 8, 9 and 11
	Assignments	1	5% (5)	7	LO #2, 3, 4, 5 and 6

assessment	Homework	3	12% (12)	4,8,10	LO #2-3, 4-7 and 8-9
	Report	1	8% (8)	8	
Summative assessment	Midterm Exam	1.5 hr	10% (10)	7	LO # 1-9
	Final Exam	3hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Matrices: Basic Definitions, Addition, Subtraction and Multiplication, Determinants, The Inverse of a 3 x 3 Matrix, Creamers Rule.
Week 2	Solve equations by Matrices: Gaussian Elimination. the method of finding the inverse of a square matrix, solution of simultaneous linear equations by matrix method.
Week 3	Coordinates and Graphs in the Plane: Directions and Quadrants, Distance between Points, Graphs of Equations, Intercepts and More about Graphing.
Week 4	Slope and Equations for Lines: Slope of Non-vertical Lines, Lines that are Parallel or Perpendicular, Point – Slope Equations, Slope – Intercept Equations.
Week 5	Functions and their Graphs: Domains and Ranges are Often Intervals, Even Functions and Odd Functions, Functions Defined in Pieces.
Week 6	Shifts, Circles, and Parabolas: How to Shift a Graph, Equations for Circles in the Plane, Equations for Parabolas.
Week 7	A Review of Trigonometric Functions: Radian Measure, The Six Basic Trigonometric Functions, Calculating Sines and Cosines, Graphs of Trigonometric Functions.
Week 8	Limits and Continuity: Limits, Examples of Limits, The Sandwich Theorem and $(\infty)/(\infty)$, Limits Involving Infinity, Continuous Functions.
Week 9	Derivatives: Slopes, Tangent Lines, and Derivatives, Defining Slopes and Tangent Lines The Derivative of a function, The Slope of Lines.
Week 10	Differentiation Rules: Integer Powers, Multiples, Sums, and Differences Second and Higher Order Derivatives, Negative Integer Powers of x.

Week 11	Velocity, Speed, and Other Rate of Change: Velocity, Speed, Acceleration
Week 12	Derivatives of Trigonometric Functions: The Derivative of the Sine, The Derivative of the Cosine, The Derivative of the Other Basic Functions.
Week 13	The Chain Rule: Integer Powers of Differentiable Functions, Derivative Formulas that Include the Chain Rule.
Week 14	Implicit Differentiation: Lenses, Tangents, and Normal Lines Using Implicit Differentiation to Find Derivatives of Higher Order.
Week 15	Fractional Powers: Fractional Powers of Differentiable Functions, Linear Approximations and Differentials.
Week 16	Preparatory week before the final Exam

Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			

Module Aims أهداف المادة الدراسية	17. To develop the engineer's ability to imagine projections and their models. 18. Engineering drawing exercises hand movement to complete quick sketches. 19. This course deals with theory of Orthographic Projection. 20. This is the basic subject for isometric drawing. 21. To teach students engineering drawings using AutoCAD program, and this includes both theoretical lectures and Lab. 22. To help students to use AutoCAD for engineering drawings efficiently in their designs & projects.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	21. Absorbing all the engineering characteristics of an object or a product in a clear manner. 22. Know the tools used in engineering drawing and how to use them correctly 23. understand and apply the basics of engineering processes. 24. Conclude projections and isometric for each geometric figure and recognize its dimensions. 25. students will be able to use AutoCAD commands to make drawings 26. create & insert symbols, dimension in a drawing, create blocks, and plot drawings with certain scales.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - tools, lines, scale, Engineering processes (part 1) & getting started, view commands</u> Introduction to engineering drawing, learn about engineering tools and how to use them. Types of pens, Billboard layout and address field preparation, Types of lines [3 hrs.] Classwork 1. [2 hrs.] Defining the drawing scale and its types, apply and draw engineering processes [3 hrs.] Classwork 2. [2 hrs.] Lab: Getting started, view Commands [10 hrs.] Quizzes [1 hr.] <u>Part B- Engineering processes (part 2) , Orthographic Projection (part 1) & Drawing , modify I Commands</u> Draw tangents, Types of projections resulting from vertical projection. [6 hrs.]
	Classwork 3. [2 hrs.] , Classwork 4. [2 hrs.]

	Lab: Drawing Commands, modify I Commands [10 hrs.] Quizzes [1 hr.] <u>Part C- Orthographic Projection (part 2) , Isometric Drawing & Modify II, Dimensions , text Commands</u> Arrangement and drawing of projections, draw the isometrically axis, Imagine and draw the isometrically body [8 hrs.] Classwork 5. [2 hrs.] , Classwork 6. [2 hrs.] Lab: Modify II Commands, Dimension Commands, Text Commands [8 hrs.] Quizzes [1 hr.]

Delivery Plan (Weekly Syllabus)

المناهج الاسبوعي النظري

	Material Covered
Week 1	Introduction and definition of engineering drawing, learn about engineering tools, Types of pens used, Drawing board layout
Week 2	Types of lines in engineering drawing, Defining the drawing scale and its types
Week 3	Classwork 1
Week 4	Engineering processes (part 1): Teaching students how to apply and draw line relationships
Week 5	Classwork 2
Week 6	Engineering processes (part 2): Making tangents, reverse curves
Week 7	Classwork 3
Week 8	Mid-term Exam
Week 9	Orthographic Projection (part 1): theory of Orthographic Projection, combination of views
Week 10	Classwork 4
Week 11	Orthographic Projection (part 1): Arrangement and drawing of projections
Week 12	Classwork 5
Week 13	Isometric Drawing, I: draw the isometrically axis, Imagine and draw the isometrically body
Week 14	Classwork 6
Week 15	Isometric Drawing II: isometric circles
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus)

المناهج الاسبوعي للمختبر

	Material Covered
--	------------------

Week 1	Lab 1: start a new drawing, user Interface, units, limits
Week 2	Lab 2: grid, snap, absolute & relative coordinate system, ortho.
Week 3	Lab 3: zoom, pan, osnap, polar tracking
Week 4	Lab 4: pline, pedit, selecting object, erase
Week 5	Lab 5: ltype, ltscale.
Week 6	Lab 6: line, arc, circle, ellipse
Week 7	Lab 7: polygon, rectangle
Week 8	Lab 8: copy, move, mirror, trim, rotate
Week 9	Lab 9: scale, undo, redo, stretch, divide
Week 10	Lab 10: extend, offset.
Week 11	Lab 11: array, Lweight , Measure
Week 12	Lab 12: Fillet , Chamfer, Explode
Week 13	Lab 13: Text, Mtext, Area
Week 14	Lab 14: Dimensions & Leaders, color
Week 15	Lab 15: Block, plot.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
	23. To understand many principles and units and their abbreviations correctly in the physics, such as State SI units, determine whether a physical quantity is a		

Module Aims أهداف المادة الدراسية	vector or a scalar, and distinguish between kinematic and kinetic energy. 24. To understand Differentiate between static and kinetic friction, and solve friction problems; State and apply Hooke's law for ideal springs; Define work, and calculate the work done by a constant force in one and two dimensions. 25. This course deals with Define, calculate, and distinguish between distance and displacement, average and instantaneous speed and velocity, and average and instantaneous acceleration; State, explain, and apply Newton's three laws of motion. 26. This course deals with the basic concept of the State the work-energy theorem, and use it to solve problems; Apply the principle of conservation of mechanical energy to solve simple problems in mechanics; Calculate both kinetic and potential energy; Calculate the power. 27. To develop problem, solve problems using Newton's law of universal gravitation and calculate the gravitation for different locations (i.e., Earth, Moon, Sun and etc.); Derive the equation of continuity for fluids. 28. To perform and analysis of heat transfer through the facades of the buildings; Define and describe the flow of heat through a material by direct molecular contact (conduction); Derive the equation of heat transfer by conduction. 29. To understand energy level and atomic structure through energy-band theory of materials; Internal structure of materials of materials including metals, insulators and semiconductors; Electrical conduction and characteristics of the all materials such as conductivity, Mobility, energy distribution of electrons, Fermi levels, work function, and electronic emission. 30. To perform current-voltage characteristics, charge control description for all types of both the diode and transistors. 31. To model small signal and large signal of the active electronic devices such as DC load line and AC load line concept.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	27. Determine whether a physical quantity is a vector or a scalar; State, explain, and apply Newton's three laws of motion; State and apply Hooke's law for ideal springs; State the work-energy theorem, and use it to solve problems; Express Newton's laws in terms of rates of change of linear momentum; Calculate the pressure and density of fluid at different depth. 28. Define and describe the Bohr model of an atom; Define electron, proton, neutron, and nucleus; Explain electron shells and orbits; Explain insulators, conductors, and semiconductors and how they differ; Define valence band and conduction band Compare a semiconductor atom to a conductor atom. 29. Understanding of the fundamental concepts of current and voltage; Explain the of electrical circuit element and its objects; Define Ohm's Law; Define
	Power and Energy; Calculate Power and Energy. 30. Describe Analysis the Electric Circuits in Parallel and Series connection; Define Kirchhoff's law; Analysis the Electric Circuits using Kirchhoff's law; Solve

	problems using Kirchhoff's law; Explain the electrical symbol for a diode; Define bias and its effect on the depletion region; Define barrier potential and its effects; Several Diode Applications. 31. Discuss the various properties of diodes and transistors. 32. Explain the homo-junction and Hetero-junction materials such as PN junction diodes, PNP transistors, and NPN transistors. 33. Explain the other types of semiconductor diodes: Varactor diode, tunnel diode, photodiode and photovoltaic (solar) cell, Light emitting diode, metal electronic.
--	--

Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - Introduction to physics</u> Physics quantities, Length, mass and time; Kinematics; Position, Displacement and Distance; Speed, Velocity and Acceleration; Forces and motion; Mass and gravity force; Newton's three laws of motion. Spring forces and Hooke's law; Friction forces; Uniform circular motion; Work; Kinetic and Potential Energy; The work-kinetic energy theorem; Conservation of total mechanical energy; and Power. Linear momentum; Momentum and kinetic energy; Rate of change of linear momentum and Newton's laws; Law of conservation of linear momentum; Impulse; and Simple Harmonic Motion. [8 hrs.] Revision problem and tutorial classes [2 hrs.] Quizzes [1 hr.] <u>Part B- Atoms:</u> Atoms Structure; Atomic Energy Level; and Materials Used in Electronics. Current and Voltage; electrical circuit; and Ohm's Law. Power and Energy; and Parallel and Series Networks. Kirchhoff's Law. [8 hrs.] Quizzes [1 hr.] <u>Part C- Diode Circuit Applications:</u> p-n junction in equilibrium, current-voltage characteristics, charge-control description of a diode, Transition and diffusion capacitance's, diode switching times, diode models, small-signal model and load line concept, and introduction to Hetero-junctions and double Hetero-junctions Rectifiers, Zener diodes voltage regulators, clipping circuits, clamping circuits and wave form generation. Other Types of Semiconductor Diodes: Varactor diode, tunnel diode, photodiode
	and photovoltaic (solar) cell, Light emitting diode, metal electronic. Transistors Principle of Operation and type, Transistor biasing circuits, Application Circuit. [8 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [1 hr.]

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Introduction to physics; Standards of length, mass and time; Scalar and Vector quantities; Kinematics; Position, Displacement and Distance; Speed, Velocity and Acceleration; Forces and motion; Mass and gravity force; Newton's three laws of motion.
Week 2	Spring forces and Hooke's law; Friction forces; Uniform circular motion; Work; Kinetic and Potential Energy; The work-kinetic energy theorem; Conservation of total mechanical energy; and Power.
Week 3	Linear momentum; Momentum and kinetic energy; Rate of change of linear momentum and Newton's laws; Law of conservation of linear momentum; Impulse; and Simple Harmonic Motion.
Week 4	Universal gravitation; Newton's law of universal gravitation; Free-fall acceleration and the gravitational force; and Solve problems using Newton's law of universal gravitation and calculate the gravitation for different locations.
Week 5	Fluid mechanics; Pressure and density of fluid at different depth; Hydrostatic pressure; Pascal's principle and the operation of a hydraulic lift; Buoyant forces and Archimedes's principle; the equation of continuity for fluids; and the Bernoulli's equation.
Week 6	Basic of Architectural Physics; and Solar Radiation.

Week 7	Basic of Architectural Physics; and Solar Radiation.
Week 8	Sound; Noise; Sound Intensity
Week 9	Sound Insulation; and Thermal Behavior of Materials
Week 10	Atoms Structure; Atomic Energy Level; and Materials Used in Electronics.
Week 11	Current and Voltage; electrical circuit; and Ohm's Law.
Week 12	Introduction of Diodes, current-voltage characteristics of diode. Forward and reverse biasing of diodes, Temperature effects for diode characteristics.
Week 13	Diode Circuit Applications: Rectifiers, clipping circuits, clamping circuits.
Week 14	Zener diodes voltage regulators, and wave form generation. Varactor diode, tunnel diode, photodiode and photovoltaic (solar) cell, Light emitting diode, metal electronic.
Week 15	Introduction of transistors, Principle of Operation and type. Current-Voltage characteristics of transistors, DC Load line with state Q-Point. Transistors biasing circuits.
Week 16	Preparatory week before the final Exam

Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
	32. The module aims of Mechanical and Thermodynamics typically include providing students with a comprehensive understanding of the principles and applications of mechanical engineering and thermodynamics. The specific aims		

Module Aims أهداف المادة الدراسية	may vary depending on the educational institution or course, but here are some common objectives: 33. Understanding Fundamental Concepts: The module aims to introduce students to the fundamental concepts and principles of mechanical engineering and thermodynamics. This includes topics such as mechanics, kinematics, dynamics, energy, heat transfer, and thermodynamic processes. 34. Analytical and Problem-Solving Skills: The module aims to develop students' analytical and problem-solving skills related to mechanical and thermodynamic systems. This involves teaching them how to apply mathematical and scientific principles to solve engineering problems, analyze mechanical systems, and evaluate thermodynamic processes. 35. Thermodynamic Systems: The module aims to familiarize students with the behavior of thermodynamic systems and their applications. This includes studying topics such as the laws of thermodynamics, properties of pure substances, gas laws, energy conversion processes, power cycles, and refrigeration cycles. 36. Heat Transfer: The module aims to teach students about the principles of heat transfer and its applications in engineering. This involves studying modes of heat transfer, including conduction, convection, and radiation, as well as heat exchangers, thermal insulation, and heat transfer analysis in various systems. 37. Mechanical Systems and Dynamics: The module aims to provide students with an understanding of mechanical systems and their dynamics. This includes topics such as statics, dynamics, forces, motion, and mechanical components like gears, bearings, and linkages.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Mechanical Engineering: 34. Apply fundamental principles of mechanics to analyze and solve engineering problems. 35. analyze mechanical components and systems considering factors such as strength, stiffness, and safety. 36. knowledge of thermodynamics and fluid mechanics to analyze energy conversion systems. Thermodynamics: 37. Understand the basic concepts and laws of thermodynamics, including energy, entropy, and the First and Second Laws of Thermodynamics. 38. Apply thermodynamic principles to analyze and solve problems related to heat transfer, work, and energy conversion. 39. Analyze thermal systems, including power cycles, refrigeration cycles, and heat
	exchangers. 40. Apply thermodynamic principles to analyze combustion processes and internal combustion engines. 41. Apply thermodynamic principles to analyze renewable energy systems, such

	as solar and wind power systems. 42. Understand the impact of thermodynamics on environmental sustainability and energy efficiency.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A</u> Static: Force system, Units system, Forces + Components, Resultant, Moment and Couples, Equilibrium, Centroid, Moment of Inertia, Friction. Revision problem and tutorial classes. [15 hr.] Revision problem and tutorial classes [5 hrs.] Quizzes [1 hr.] <u>Part B</u> Dynamics: Rectilinear motion, Curvilinear motion, Projectile, Circular motion, Acceleration Components (Rectangular Comp., Normal Tangential Comp.), Kinetic -2nd Law of Newton. [15 hrs.] Revision problem and tutorial classes [5 hrs.] Quizzes [1 hr.] <u>Part C</u> Thermodynamics: Properties of Substance, Pressure and Temperature, Work and Energy, Ideal Gas, First Law of Thermodynamics, 2nd Law of Thermodynamics. Hook's law. [15 hr.] Revision problem and tutorial classes [5 hrs.] Revision problem and tutorial classes [6 hrs.] Quizzes [1 hr.]
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims	The module aims to prepare students to work with computers. It also teaches		

أهداف المادة الدراسية	students the fundamentals of computers and their components. Students will learn about computer operating systems, with a focus on Windows. Students will also learn how to use Microsoft Office applications: Word, Excel, and PowerPoint.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. The ability to identify, analyze, and solve complex engineering problems based on the principles of engineering, science, and mathematics. 2. The ability to acquire and apply new knowledge using appropriate learning strategies. 3. The ability to participate in and work professionally and ethically on multidisciplinary teams and projects. Students who pass this module are expected to learn the following topics: 1. Computers and operating systems 2. Software and hardware interaction 3. Windows File Management 4. Operating System Customization 5. Computer Hardware 6. Monthly Lab Exam 7. Exploring Microsoft Office 8. Getting Started with MS Word Essentials 9. Editing and Formatting Documents 10. Getting Started with MS Excel Essentials 11. Organizing and Enhancing Worksheets 12. Creating Formulas and Charting Data 13. Getting Started with MS PowerPoint Essentials 11. Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy for teaching this module is to encourage student participation in laboratory activities and refine and expand their critical thinking skills. This will be achieved through classes, laboratory work, and external research involving computer technology that interests students. 1. Lectures: • Structured lectures introduce fundamental concepts and practical applications. • Emphasis is placed on fundamental understanding, practical application, and actual use of the software. 2. Problem-solving sessions • Guided tutorials focus on solving real problems related to the software. • Students practice the fundamentals of the software.
	• Active student participation is encouraged through in-class discussions. 3. Project-Based Learning: • Individual or group mini-projects involve the practical use of the software. 4. Self-Directed Learning: • Students are encouraged to engage in independent study through textbooks, research papers, and online resources. • Homework assignments and reading tasks support a deeper understanding.

	5. Continuous Feedback: Regular formative feedback is provided through assignments, quizzes, labs, and reports.

Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Objectives أهداف المادة الدراسية	الهدف من هذا الفصل الدراسي هو تعريف الطلاب بالموضوعات الرئيسية لمادة اللغة العربية. سيعطي الفصل الدراسي المتطلبات الأساسية لتعاريف اللغة العربية، قواعد نحوية للأزمنة، تنمية القدرات النحوية لصيغ المفرد والجمع والممنوع من الجرد، بالإضافة الى البلاغة والتطبيق. وفي نهاية الفصل، سيكون لدى الطلاب معرفة واسعة بالمفاهيم وسيتم تحقيق ذلك من خلال المحاضرات النظرية والدروس والواجبات البتية والتقارير ذات الصلة بالمواضيع المطروقة.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	CLO1: تعريف الطلاب بألفاظ اللغة العربية الصحيحة وتراكيبها وأساليبها السليمة بطريقة مشوقة وجذابة. CLO2: أن يستغل الطالب وقت فراغه بالقراءة والاطلاع والرجوع إلى المكتبة. CLO3: تمكين الطالب من القراءة الصحيحة، وأن يكتسب القدرة على استعمال اللغة استعمالاً صحيحاً في الاتصال مع الآخرين. CLO4: تنمية الذوق الأدبي لدى الطالب حتى يدرك النواحي الجمالية في أساليب الكلام ومعانيه وصورة. CLO5: تنمية قدرة ومهارة الطالب الإملائية والخطية بحيث يستطيع الكتابة الصحيحة للاكتب والمخاطبات الرسمية. CLO6: تمكين الطالب على كتابة التقارير العملية والنظرية والعروض التقديمية بلغة عربية واضحة وصحيحة. CLO7: القدرة على اكتساب وتطبيق المعرفة الجديدة واستخدام استراتيجيات تعليم مناسبة. CLO8: القدرة على المشاركة والعمل بمهنية واخلاقية للعمل في فرق متعددة التخصصات.
Indicative Contents	الجزء الأول: مقدمة عن اللغة العربية (4 ساعات)
لمحتويات الإرشادية	٦٨ مقدمة عن اللغة العربية^١ ٦٨ تعريف اللغة العربية^١ ومم^kاتها الجزء الثاني: قواعد نحوية وتشمل: (6 ساعات) ٦٨ الفعل الما^k r_W ٦٨ الفعل الما^k r_W ٦٨ الافعال الخمسة الجزء الثالث: تنمية القواعد النحوية وتشمل: (6 ساعات) ٦٨ المث^k والجمع (المذكر السالم والمؤنث السالم)

	٦٨	التعجب
	٦٨	الممنوع من الإف
	٦٨	المجرد والمعتد
	الجزء الرابع: البلاغة والتطبيق (8 ساعات)	
	٦٨	الاستعارة
	٦٨	الجناس
	٦٨	الطاق
	٦٨	الـشاه
	الجزء الخامس: قواعد املائية: (3 ساعات)	
	سوف يتم تعريف الطالب عن الأخطاء الاملائية الشائعة وطرق تجنبها بالإضافة الى كتابة المخاطبات الادرية.	
	الجزء السادس: قواعد العد والمعدود: (3 ساعات)	
	تعريف الطالب بقواعد واحكام العد والمعدود في اللغة العربية.	

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies الاستراتيجيات	توسيع مدارك الطلاب لمادة اللغة العربية، والإلمام بالمفاهيم الأساسية للغة العربية والبلاغة، والقدرة على التمييز بين الأزمنة. يحتوي هذه الفصل على العديد من المكونات التي تشمل دراسة المحاضرات والبرامج التعليمية والمناقشة والواجبات المنزلية ومنصات التعلم الإلكتروني. سيتم تدريس الدورة باللغة العربية، ويجب تقديم جميع المهام الإلزامية في غضون المواعيد النهائية للقبول في الامتحان.

Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
	38. To develop problem solving skills and understanding of AC circuit		

Module Aims أهداف المادة الدراسية	theory through the application of techniques. 39. To understand voltage, current and power from a given AC circuit. 40. This course deals with the basic concept of AC electrical circuits. 41. This is the basic subject for all AC electrical and electronic circuits. 42. To understand Kirchhoff's current and voltage Laws problems. 43. To perform mesh and Nodal analysis. 44. To perform Thevenin and superposition theory. 45. To understand the resonant circuits.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	43. Recognize how electricity works in electrical circuits. 44. List the various terms associated with electrical circuits. 45. Summarize what is meant by a basic AC electric circuit. 46. Describe electrical AC voltage, current and power. 47. Define Ohm's law in AC circuits. 48. Identify the basic circuit passive and active elements and their applications. 49. Discuss the various properties of impedance. 50. Explain the two Kirchhoff's laws used in AC circuit analysis. 51. Explain the Analysis Methods used in AC Electrical Circuits.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - Circuit Components and values</u> AC circuits, Current and voltage definitions, circuit elements, impedance networks, real and ideal elements, voltage and current sources. [9 hrs.] Lab. [6 hrs.] Revision problem and tutorial classes [6 hrs.] Quizzes [1 hr.] <u>Part B- Circuit reduction</u> combining sources, Combining impedances elements in series and parallel, delta and star transformation. [12 hrs.]
	Revision problem and tutorial classes [8 hrs.] Lab. [8 hrs.] Quizzes [1 hr.] <u>Part C- Circuit Theory</u> Kirchhoff's laws and Ohm's law. Introduction to mesh and nodal analysis, Introduction to Thevenin and Norton theory, maximum power transfer, introduction to superposition theory, the resonant circuits. [24 hrs.] Revision problem and tutorial classes [16 hrs.]

	Lab. [16 hrs.]
	Quizzes [1 hr.]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.
-------------------	--

Student Workload (SWL)

الحمل الدراسي للطالب محسوب لـ ١٥ اسبوعا

Structured SWL (h/sem)		Structured SWL (h/w)	
الحمل الدراسي المنتظم للطالب خلال الفصل	123	الحمل الدراسي المنتظم للا طالب أسبوعيا	8

Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للطلاب خلال الفصل	77	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للطلاب أسبوعيا	5
Total SWL (h/sem) الحمل الدراسي الكلي للطلاب خلال الفصل	200		

Module Evaluation					
تقييم المادة الدراسية					
		Time/Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	1	10% (10)	4,8,12	LO #1, 5, 8 and 9
	Assignments	10	5% (5)	2 to 12	LO #1, 2, 4, 6 7, 8 and 9
	Projects / Lab.	2	25% (25)	Continuous	All
	Report	0	0% (0)	----	----
Summative assessment	Midterm Exam	2 hr.	10% (10)	7	LO # 1-5
	Final Exam	3hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)	
المنهاج الاسبوعي النظري	
	Material Covered
Week 1	Basic Concept & Units in AC circuits, waveforms of AC sources
Week 2	Average and RMS values, Form Factor, Crest Factor
Week 3	Ohm's law, impedance and admittance calculations
Week 4	equivalent impedance: Series-parallel and delta - star transformation
Week 5	power calculation in A.C circuit and power factor
Week 6	Kirchhoff's laws: KVL-KCL

Week 7	Phasor diagram
Week 8	Mid-term Exam
Week 9	introduction to network theorems, types of source: independent and dependent voltage and current sources and their transformation
Week 10	Maxwell's circulating currents (mesh analysis)
Week 11	nodal analysis
Week 12	superposition theorem
Week 13	Thevenin's theorem and Norton's theorem
Week 14	maximum power transfer theorem
Week 15	Resonant circuits
Week 16	Preparatory week before the final Exam

Delivery Plan (Weekly Lab. Syllabus)

المنهاج الاسبوعي للمختبر

	Material Covered
Week 1	Lab 1: Introduction to lab. components
Week 2	Lab 2: Introduction to AVO meter (using in AC circuits) and oscilloscope
Week 3	Lab 3: Introduction to AC function generator
Week 4	Lab 4: ohm's Law application in AC circuit
Week 5	Lab 5: series and parallel impedance, delta and star transformation
Week 6	Lab 6: Kirchhoff's Voltage Law
Week 7	Lab 7: Kirchhoff's Current Law
Week 8	Lab 8: implementation of Maxwell's circulating currents (mesh analysis)
Week 9	Lab 9: implementation of Nodal analysis
Week 10	Lab 10: implementation of Superposition theorem

Week 11	Lab 11: implementation of Thevenin's / Norton's Theorem
Week 12	Lab 12: implementation of maximum power transfer theorem
Week 13	Lab 13: AC power measurements (methods and instrumentations)
Week 14	Lab 14: power factor measurements
Week 15	Lab 15: resonance circuits validation

Learning and Teaching Resources

مصادر التعلم والتدريس

	Text	Available in the Library?
Required Texts	Engineering Circuit Analysis 7th Edition by William Hayt , Jack Kemmerly , Steven Durbin	Yes
Recommended Texts	Schaum's Outline of Basic Circuit Analysis, Second Edition (Schaum's Outlines) 2nd Edition, by John O'Malley	No
Websites	AC Electrical Circuit Analysis: A Practical Approach Copyright Year: 2017.	

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX - Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F - Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	1. Provide students with a strong support for basic learning calculus concepts: limits, derivatives, and integration. 2. Help students communicate mathematical ideas through the practice of proper mathematical notations. 3. Help students to verify mathematical ideas through the practice of proper mathematical proof techniques. 4. Developing mathematical thinking and understanding in students by guiding them towards deep thinking rather than “memorizing all the rules”. 5. Increase students’ awareness of alternate means of learning such as group study, as well as strategies that will enhance the learning of mathematics.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon completion of the course, the student will be able to: 1. how to calculate the area under and between curves. 2. interpret a volume of revolution of a function’s graph around a given axis as a (Riemann) sum of disks or cylindrical shells, convert to definite integral form and compute its value. 3. express the length of a curve as a (Riemann) sum of linear segments, convert to definite integral form and compute its value. 4. express the surface area of revolution of a function’s graph around a given axis as a (Riemann) sum of rings, convert to definite integral form and compute its value. 5. antidifferentiate products of functions by parts. 6. recognize and implement appropriate techniques to anti-differentiate products of trigonometric functions. 7. devise and apply a trigonometric substitution in integrals involving Pythagorean

	Quotients. 8. decompose a rational integrand using partial fractions. 9. determine convergence of improper integrals with discontinuities in their domain or infinite limits of integration.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Definite Integrals</u> Areas between Curves: The Basic Formula, Curves That Cross Boundaries with Changing Formulas, Integrating with Respect to y, Combining Integrals with Formulas from Geometry, Volumes of Solids of Revolution: Disc Method, Washer Method, Cylindrical Shells Method, Lengths of Curves in the Plane: The Basic Formula, Dealing with Discontinuities in dy/dx, The Short Differential Formula, Area of Surfaces of Revolution: The Basic Formula, Revolution about the y-axis, The Short Differential Form. [16 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [2 hr.] <u>Techniques of Integration:</u> Basic Integration Formulas: Algebraic Procedures and Trigonometric Identities, Integration by Parts: The Formula, Repeated Use, Solving for the Unknown Integral, Tabular Integration, Trigonometric Integrals: Products of Sines and Cosines, Eliminating Square Roots, Integrals of Powers of $\tan x$ and $\sec x$, Integrals of Odd Functions, Definite Integrals of Even Functions, Trigonometric Substitution: Trigonometric Substitution for Combining Squares, Integrals involving $2 + \sin^2 x$, $\cos^2 x$, $\sec^2 x$, Two Useful Formulas, Rational Functions and Partial Fractions: General Description of the Method, The Substitution $u = \tan(x/2)$. [24 hrs.] Revision problem and tutorial classes [6 hrs.]
	Quizzes [2 hr.] <u>Plane Curves and Polar Coordinates:</u> Polar Coordinates, Definition of Polar Coordinates, Negative Values of r, Changing to Radian Measure, The Use of Radian Measure, Elementary Coordinate, Equations and Inequalities, Cartesian Versus Polar Coordinates, Graphing in Polar Coordinates: Symmetry and Slope, Faster Graphing, Finding the Points Where Curves Intersect. [6 hrs.] Revision problem and tutorial classes [2 hrs.] Quizzes [1 hr.]

Delivery Plan (Weekly Syllabus)

المنهاج الأسبوعي النظري

	Material Covered
Week 1	Calculus and Area: Regions Bounded by Curves, Area under the Graph of a Nonnegative Continuous Function.
Week 2	Definite Integrals: Constant Functions, Area is Strictly a Special Case.
Week 3	Indefinite Integrals: The Indefinite Integral of a Function, Rules of Algebra, The Integrals of 2

	2 , Solving Initial Value Problems with Indefinite Integrals.
Week 4	Integration by Substitution-Running the Chain Rule Backward: The Generalized Power Rule in Integral Form, Sines and Cosines, The Substitution Method of Integration, Substitution in Definite Integrals.
Week 5	Application of Definite Integrals: Areas between Curves: The Basic Formula, Derived from Riemann Sums, Curves That Cross Boundaries with Changing Formulas, Integrating with Respect to y, Combining Integrals with Formulas from Geometry.
Week 6	Volumes of Solids of Revolution: Disc Method, Washer Method, Cylindrical Shells Method.
Week 7	Lengths of Curves in the Plane: The Basic Formula, Dealing with Discontinuities in dy/dx , The Short Differential Formula.
Week 8	Area of Surfaces of Revolution: The Basic Formula, Revolution about the y-axis, The Short Differential Form.
Week 9	Techniques of Integration: Basic Integration Formulas: Algebraic Procedures and Trigonometric Identities.
Week 10	Integration by Parts: The Formula, Repeated Use, Solving for the Unknown Integral, Tabular Integration.
Week 11	Trigonometric Integrals: Products of Sines and Cosines, Eliminating Square Roots, Integrals of Powers of $\tan x$ and $\sec x$, Integrals of Odd Functions, Definite Integrals of Even Functions.
Week 12	Trigonometric Substitution: Trigonometric Substitution for Combining Squares, Integrals involving $\sqrt{a^2 - x^2}$, $\sqrt{x^2 - a^2}$, $\sqrt{x^2 + a^2}$, Two Useful Formulas.
Week 13	Rational Functions and Partial Fractions: General Description of the Method, The Substitution $u = \tan(\theta/2)$.
Week 14	Plane Curves and Polar Coordinates: Polar Coordinates, Definition of Polar Coordinates, Negative Values of r, Changing to Radian Measure, The Use of Radian Measure, Elementary Coordinate, Equations and Inequalities, Cartesian Versus Polar Coordinates.
Week 15	Graphing in Polar Coordinates: Symmetry and Slope, Faster Graphing, Finding the Points Where Curves Intersect.
Week 16	Preparatory week before the final Exam

Prerequisite module	None	Semester	
Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
	1. Introduction of MATLAB program (m file).

Module Aims أهداف المادة الدراسية	2. To understand Types of variables, numbers, Expressions, operation and function. 3. To understand Solving of Electrical circuit in MATLAB program. 4. To perform Solving equations by symbols. 5. To solve the Function and its application (pulse & ramp functions). 6. To perform Engineering graphics (two dimensions and three dimensions) such as vector diagram mesh, bar plots). 7. To perform Matrix and its applications.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Proficiency in MATLAB: Students should develop a strong understanding of the MATLAB programming language, syntax, and functionality. They should be able to write, debug, and modify M-file programs effectively. 2. Problem-solving skills: MATLAB is often used for scientific and engineering applications, so students should learn how to apply MATLAB to solve complex problems in their respective fields. They should be able to analyze problems, develop algorithms, and implement them using MATLAB. 3. Data analysis and visualization: MATLAB offers powerful tools for data analysis and visualization. Students should learn how to import, manipulate, analyze, and visualize data using MATLAB functions and techniques. 4. computation: MATLAB is well known for its mathematical computing capabilities. Students should become proficient in using MATLAB for performing mathematical computations, including linear algebra and differential equations. 5. Algorithm development: MATLAB allows students to develop algorithms and implement them in M-file programs. They should learn how to break down complex problems into smaller, manageable tasks, design algorithms to solve those tasks, and integrate them into a complete MATLAB program. 6. Code optimization: Students should develop skills in optimizing MATLAB code for improved performance and efficiency. 7. Debugging and troubleshooting: MATLAB programs may encounter errors or produce unexpected results. Students should learn how to effectively debug

	and troubleshoot their M-file programs, identify and resolve issues, and improve the overall reliability of their code. 8. Documentation and code organization: Writing clear and well-organized code is crucial for collaboration and future maintenance. Students should learn to document their MATLAB programs, including comments, variable naming conventions, and overall code structure 9. Project implementation: In some cases, students may be required to develop larger-scale projects using MATLAB. They should learn how to plan, manage, and implement MATLAB-based projects, ensuring that their programs meet the specified requirements and deliver the desired outcomes.
Indicative Contents المحتويات الإرشادية	Part A - Circuit Components and values Introduction to MATLAB, Types of variables, Numbers and Expressions, Operation, Functions, Solving set of linear equations, Function and its application (pulse & ramp functions). [14 hrs.] Lab. [14 hrs.] Revision problem and tutorial classes [4 hrs.] Part B- Circuit reduction Differentiation, Integration, Solving of Electrical circuit, Engineering graphics (two dimension and three dimensions) such as vector diagram mesh and bar plots, Solving of ordinary differential equation, Curve fitting and interpolation, Matrix and its applications [14 hrs.] Lab. [14 hrs.]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy for delivering this module is to encourage student participation in exercises that refine and expand critical thinking skills. This will be achieved through classes and interactive tutorials, as well as by conducting simple experiments involving sampling activities that interest the students.

Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			

Module Aims أهداف المادة الدراسية	46. To develop problem solving skills and understanding of Digital circuit theory through the application of techniques. 47. To understand Digital circuit, latches and Flip-flops, asynchronous binary counters, synchronous binary counters. 48. This course deals with the basic concept of latches and Flip-flops, asynchronous binary counters, synchronous binary counters. 49. To construct data storage units/shift registers using flip flops 50. To analyze sequential logic circuits using appropriate tools. 51. To design and analyze synchronous binary, up/down counters.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	52. Recognize how combinational logic circuits works. 53. Design combinational logic circuits using combination logic design process. 54. Define and describe various latches and Flip-flops 55. Construct data storage units/shift registers using flip flops 56. Define asynchronous and synchronous Digital circuit 57. Identify how to design and analyze asynchronous binary counters. 58. Explain how to design and analyze BCD asynchronous counters 59. Explain the Synchronous counters Binary Counters 2: bit, 3-bit. 60. Explain the types of shift registers and Shift register counters Ring Counter.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - Circuit Components and values</u> Introduction to Digital Technique, Basic Definitions, System of Numbers, General number formula: Binary, octal, decimal & hexadecimal numbers, Numbers Base Conversion (Arithmetic operation in different numbers complements, binary codes, BCD, Ex-3, gray codes). [9 hrs.] : Revision problem and tutorial classes [6 hrs.] : Quizzes [1 hr.] <u>Part B- Circuit reduction</u> Boolean algebra: (Basic definitions, basic theorem & properties, Boolean functions), Canonical & Standard Forms Digital Logic Gates. [12 hrs.]: Revision problem and tutorial classes [8 hrs.]: Quizzes [1 hr.] <u>Part C- Circuit Theory</u>

	Karnaugh Maps (AND & OR implementation, don't care condition), Adders Arithmetic Operation (Sub tractors, half & full adders & Subtractors, binary parallel adders), Code Conversion (Even and odd parity logic, decoders, encoders comparator, multiplexers & demultiplexers), Sequential Logic (Flip Flops (RS, T, D, JK...) Master slave FF, Counters, Shift registers).. [24 hrs.]: Revision problem and tutorial classes [16 hrs.]:Quizzes [1 hr.]

Prerequisite module	None		Semester
Co-requisites module	None		Semester
Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			

Module Aims أهداف المادة الدراسية	52. To develop problem solving skills of electronic circuit through the understanding solid state for each electronic passive and active elements such as RLC, diodes, transistors, and integrated circuits. 53. To understand energy level and atomic structure through energy-band theory of materials. 54. This course deals with the basic concept and Internal structure of materials of materials including metals, insulators and semiconductors. 55. To understand electrical conduction and characteristics of the all materials such as conductivity, Mobility, energy distribution of electrons, Fermi levels, work function, and electronic emission. 56. To understand the intrinsic and extrinsic semiconductors parameters. 57. To perform current-voltage characteristics, charge control description for all types of both the diode and transistors. 58. To model small signal and large signal of the active electronic devices such as DC load line and AC load line concept.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	61. Recognize the Semiconductors and compound semiconductors materials such as Si, Ge, and GaAs. 62. List the various terms associated with active electronics elements. 63. Summarize what is meant by an electronic circuit. 64. Describe energy band theory of all materials. 65. Discuss the various properties of diodes and transistors. 66. Explain the homo-junction and Hetero-junction materials such as PN junction diodes, PNP transistors, and NPN transistors. 67. Explain the other types of semiconductor diodes: Varactor diode, tunnel diode, photodiode and photovoltaic (solar) cell, Light emitting diode, metal electronic.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - Energy Level and Atomic Structure</u> The atom, models, wave nature of light, dual nature of matter, energy-band theory of metals, insulators and semiconductors, crystal structure, ionic, covalent and metallic bonding, energy band of crystals, Internal structure of materials cell, packing miller indices, crystal planes and directions. [8 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [1 hr.]
	<u>Part B- Electrical Conduction in Metals:</u>

	Mobility and conductivity, energy distribution of electrons, Fermi levels, work function, electronic emission. Semiconductors: Semiconductors materials (Si, Ge and compound semiconductors), extrinsic semiconductors, Fermi-level in semiconductor, diffusion and carrier life time, Hall effect. [8 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [1 hr.] <u>Part C- Semiconductor p-n Junction:</u> p-n junction in equilibrium, current-voltage characteristics, charge-control description of a diode, Transition and diffusion capacitance's, diode switching times, diode models, small-signal model and load line concept, and introduction to Hetero-junctions and double Hetero-junctions. [6 hrs.] Revision problem and tutorial classes [3 hrs.] Quizzes [1 hr.] <u>Part D- Diode Circuit Applications:</u> Rectifiers, Zener diodes voltage regulators, clipping circuits, clamping circuits and wave form generation. Other Types of Semiconductor Diodes: Varactor diode, tunnel diode, photodiode and photovoltaic (solar) cell, Light emitting diode, metal electronic. Transistors Principle of Operation and type, Transistor biasing circuits, Application Circuit. [8 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [1 hr.]
--	--

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Energy Level and Atomic Structure: The atom, models, wave nature of light, dual nature of matter. Energy-band theory of metals, Insulators and semiconductors, Crystal structure, Ionic, Covalent and metallic bonding.
Week 2	Energy band of crystals, Internal structure of materials cell, packing miller indices, crystal planes and directions.
Week 3	Electrical Conduction in Metals: Mobility and conductivity, energy distribution of electrons.
Week 4	Electrical Conduction in Metals: Fermi levels, Work function, Diffusion Current, Electronic emission.
Week 5	Introduction of semiconductors: Semiconductors materials (Si, Ge and compound semiconductors).
Week 6	Introduction of semiconductors: Intrinsic semiconductors, and Fermi-level in semiconductor.
Week 7	Introduction of semiconductors: Extrinsic semiconductors, and Fermi-level in semiconductor.
Week 8	Introduction of semiconductors: Demonstrated of electrical conductance in semiconductors materials. Diffusion Current in semiconductors, carrier life time, and Hall effect.
Week 9	Introduction semiconductor P-N junction: P-N junction in equilibrium, current-voltage characteristics. charge-control description of a diode.
Week 10	Diffusion current, diffusion current density, draw Energy-band level. Transition and diffusion capacitance's, diode switching times.
Week 11	diode models, small-signal model and load line concept, and introduction to Hetero-junctions and double Hetero-junctions.
Week 12	Introduction of Diodes, current-voltage characteristics of diode. Forward and reverse biasing of diodes, Temperature effects for diode characteristics.
Week 13	Diode Circuit Applications: Rectifiers, clipping circuits, clamping circuits.
Week 14	Zener diodes voltage regulators, and wave form generation. Varactor diode, tunnel diode, photodiode and photovoltaic (solar) cell, Light emitting diode, metal electronic.
Week 15	Introduction of transistors, Principle of Operation and type. Current-Voltage characteristics of transistors, DC Load line with state Q-Point. Transistors biasing circuits.
Week 16	Preparatory week before the final Exam

Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
	The aim of studying the democracy and human rights topics is to: 1. Understand the concept of human rights and explore their sources, including		

Module Aims أهداف المادة الدراسية	international, regional, national, and religious sources. 2. Define administrative corruption, explore its types, and understand its detrimental effects on society. Study methods to combat administrative corruption and promote transparency, accountability, and good governance. 3. Trace the historical development and evolution of human rights, examining key milestones and movements that have shaped the modern understanding of human rights. 4. Differentiate between different categories of human rights, including civil and political rights, economic and social rights, and environmental, cultural, and developmental rights. 5. Explore legal, institutional, and societal guarantees to prevent human rights violations, including guarantees of human rights in Islam, national-level protections, and international safeguards. 6. Comprehend the concept of democracy, including its principles, values, and various forms of democratic governance such as direct, semi-direct, indirect, and digital democracy. Overall, studying these topics aims to develop a comprehensive understanding of human rights, democracy, and combating corruption, empowering individuals to actively promote and protect human rights and democratic values in society.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	After these module aims, students should be able to: 1. Demonstrate a comprehensive understanding of the concept of human rights and their sources, including international, regional, national, and religious sources. 2. Identify and explain the fundamental characteristics of human rights, such as universality, indivisibility, interdependence, and inalienability. 3. Analyze the historical emergence and evolution of human rights, including key milestones and movements that have shaped their development. 4. Differentiate between different categories of human rights, including civil and political rights, economic and social rights, and environmental, cultural, and developmental rights. 5. Evaluate and apply legal, institutional, and societal guarantees to prevent human rights violations, considering guarantees in Islam, at the national level, and within the international framework. 6. Understand and discuss the concept of democracy, including its principles, values, and different forms of democratic governance. 7. Evaluate the Islamic stance on democracy and engage in critical analysis of the strengths and weaknesses of the democratic system. 8. Recognize and assess the impact of administrative corruption on society and propose methods to combat and prevent corruption in administrative systems. 9. Demonstrate critical thinking skills by analyzing and evaluating different perspectives on human rights, democracy, and corruption.
	10. Apply acquired knowledge and skills to promote and protect human rights,

	democracy, and good governance in personal, professional, and civic contexts. Overall, students should have a solid understanding of democracy and human rights, democracy, and corruption issues, and be able to apply this knowledge to contribute to the advancement of human rights and democratic values in society.
Indicative Contents المحتويات الإرشادية	The indicative content includes: 1. Definition and sources of democracy and human rights (international, regional, national, religious). [3h] 2. Characteristics of democracy and human rights: universality, indivisibility, interdependence, inalienability. [3h] 3. Emergence and evolution of human rights: historical development, key milestones, influential movements. [3h] 4. Types of human rights: civil and political, economic and social, environmental, cultural, and developmental. [3h] 5. Guarantees to prevent human rights violations: legal, institutional, societal safeguards, Islamic guarantees, national and international levels. [3h] 6. Concept of democracy: principles, values, forms of governance (direct, semi-direct, indirect). [3h] 7. Islamic stance on democracy: compatibility, strengths, weaknesses. [3h] 8. Critique of the democratic system: analysis of strengths and weaknesses. [3h] 9. Administrative corruption: definition, types, societal impact. [3h] 10. Methods to combat administrative corruption. [3h]

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	When it comes to learning and teaching strategies for a human rights module, there are several approaches can be taken to enhance understanding and engagement. Here are some effective strategies: 1. Interactive Discussions: Encourage students to actively participate in discussions, debates, and group activities. This promotes critical thinking, allows for different perspectives to be shared, and fosters a deeper understanding of human rights issues. 2. Case Studies: Present real-life case studies that highlight human rights violations or achievements. Analyzing these cases helps students apply theoretical concepts to practical situations and develops their problem-solving skills.

	3. Research Projects: Assign research projects on specific human rights topics or issues. This encourages independent learning, critical analysis, and the development of research skills. 4. Collaborative Learning: Foster collaboration among students through group projects or assignments. This encourages teamwork, peer learning, and the exchange of diverse perspectives. 5. Assessment Variety: Use a variety of assessment methods, including essays, presentations, debates, and quizzes, to assess students' understanding of human rights concepts and their ability to apply them to real-world situations.

	Material Covered
Week 1	Transient Response of First-Order RL and RC circuits.
Week 2	Natural Response, and Complete response of First-Order RL and RC circuits.
Week 3	, General response, sequential switching of First-Order RL and RC circuits
Week 4	Forced response and natural response of First-Order RL and RC circuits
Week 5	Transient Response of Second Order RLC circuits
Week 6	Natural response of series RLC circuits. of Second Order RLC circuits, Natural response of series RLC circuits.
Week 7	Analysis of overdamped, underdamped and critically damped RLC circuits.
Week 8	Complete analysis of RLC circuits.
Week 9	Transient analysis of parallel RLC circuits.
Week 10	Coupling: Magnetic coupling, Coefficient of coupling, the linear transformer.
Week 11	T- and PI model the ideal transformer: impedance matching.
Week 12	Two-Port Networks.
Week 13	Terminal equations: a, b, y, z, g and h parameters.
Week 14	Analysis of a terminated 2-port network. Interconnected 2-port networks.

Week 15	Poly-phase Circuits: Single-phase and three phase wire system.
Week 16	Preparatory week before the final Exam

Learning and Teaching Resources

مصادر التعلم والتدريس

	Text	Available in the Library?
Required Texts	Engineering Circuit Analysis Eight Edition (William H. Hayt) 2012	Yes
Recommended Texts	Electric Circuits Tenth Edition (James W. Nilsson) 2015	No
Websites	Fundamentals of Electric Circuits (Charles K. Alexander) 2009	

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX - Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F - Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

MODULE DESCRIPTION FORM

Module Information			
معلومات المادة الدراسية			
Module Title	Mathematics III		Module Delivery
Module Type	Basic		☒ Theory ☐ Lecture ☐ Lab ☒ Tutorial ☐ Practical ☐ Seminar
Module Code	EPPM202		
ECTS Credits	5		
SWL (hr./sem)	125		
Module Level	2	Semester of Delivery	
Administering Department	2 - (Electrical Engineering)	College	UoM2 - (Engineering)
Module Leader	Omar Sharaf Deen	e-mail	o.yehya@uomosul.edu.iq
Module Leader's Acad. Title	Assistant Professor	Module Leader's Qualification	Ph.D.
Module Tutor	Ibrahim Ismael Alnaib	e-mail	ibrahim-85353@uomosul.edu.iq
Peer Reviewer Name	Dr. Ahmad Salam	e-mail	ahmed.salim@uomosul.edu.iq
Scientific Committee Approval Date	01/06/2023	Version Number	1.0
Relation with other Modules			
العلاقة مع المواد الدراسية الأخرى			
Prerequisite module	None	Semester	
Co-requisites module	None	Semester	

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	9. Develop problem-solving skills and understand partial differentiation. 10. Understand the chain rule and the total derivative. 11. Understand vectors and units, space coordinates, and space vectors. 12. Understand gradient, divergence, and Curl in curved coordinates. 13. Solving linear differential equations of the first and second order with constant coefficients. 14. Understanding Fourier series.

Module Learning Outcomes مخرجات التعلم للمادة الدراسية	10. Understand the concept of partial derivatives for functions of two or more variables. 11. Understand the concept of the total derivative and its relationship to partial derivatives. 12. Determine whether a critical point is a maximum, minimum, or saddle point using the second derivative test or other methods. 13. Understand vector representation and components in Cartesian coordinates. 14. Understand the geometric interpretation of the vector product. 15. Express gradient, divergence, and curl in terms of curvilinear coordinates. 16. Solve first and second-order linear differential equations with constant coefficients. 17. Understand the need for Fourier series in representing periodic functions. 18. Understand double integrals and their properties.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - Partial Differentiation and Vectors</u> Partial Differentiation, function of two or more variables, partial derivatives, The Chain Rule and total Derivative, maxima, minima and saddle point, Vectors component and Units, Space coordinate and Space Vector, Scalar Product and Vector Product, Product of Three Vectors, Applications [20 hrs.] Revision problem and tutorial classes [5 hrs.]
	Quizzes [1 hr.] <u>Part B- Vector Calculus and Differential Equations</u> Vector Functions and Their Derivatives, Gradient of Scalar Field, Divergence of Vector Field, Curl of Vector Field, Directional Derivatives, Gradient, Divergence, and Curl in Curvilinear Coordinates, 1st and 2nd order linear differential equations. [20 hrs.] Revision problem and tutorial classes [5 hrs.] Quizzes [1 hr.] <u>Part C- Fourier Series and Multiple Integrals</u> Fourier series, Periodic functions and Fourier Series-Euler formulas, Double integrals, areas, and volumes [20 hrs.] Revision problem and tutorial classes [5 hrs.] Quizzes [1 hr.]

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Delivery Plan (Weekly Syllabus)

المناهج الاسبوعي النظري

	Material Covered
Week 1	Partial Differentiation: Function of two or more variables, partial derivatives.
Week 2	The Chain Rule and Total Derivative, Maxima, minima, and saddle points.
Week 3	Vectors: Vector components and units, Space coordinates and space vectors.
Week 4	Scalar Product and Vector Product, Units and plane equations.
Week 5	Equations of lines and planes, Product of Three Vectors, Applications of vectors.
Week 6	Vector Functions and Their Derivatives, Gradient of Scalar Field.
Week 7	Divergence of Vector Field, Curl of Vector Field.
Week 8	Mid-term Exam
Week 9	Directional Derivatives, Gradient, Divergence, and Curl in Curvilinear Coordinates.
Week 10	Introduction to Differential Equations, 1st and 2nd order linear differential equations.
Week 11	Application of differential equations to electrical systems.
Week 12	Transformation of higher order linear differential equations onto coupled differential equations.
Week 13	Periodic functions and Fourier Series-Euler formulas.
Week 14	Application of Fourier series in Electrical Engineering.
Week 15	Double integrals, areas, and volumes
Week 16	Preparatory week before the final Exam

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	The aims of this module are to: 1. Introduce fundamental coordinate systems and vector analysis required for electromagnetic field theory. 2. Develop a solid understanding of electrostatic fields and forces produced by discrete and continuous charge distributions. 3. Enable students to apply Gauss's law to analyze electric fields and electric flux density for highly symmetric charge configurations. 4. Provide a clear understanding of electric potential, potential difference, and energy concepts in electrostatic fields. 5. Explain the behavior of electric fields in conductors and dielectric materials, including boundary conditions and capacitance. 6. Introduce magnetostatic field concepts and enable analysis of magnetic fields produced by steady current distributions. 7. Develop the ability to apply Biot-Savart law and Ampere's circuital law to practical magnetic field problems. 8. Explain magnetic forces, work, power, and inductance in electromagnetic systems. 9. Introduce time-varying electromagnetic fields and electromagnetic induction principles. 10. Provide a foundation for understanding Maxwell's equations and electromagnetic wave propagation in free space. 11. Prepare students for advanced studies in electromagnetics, antennas, microwave engineering, and communication systems.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	19. Apply coordinate systems and vector analysis a. Use rectangular, cylindrical, and spherical coordinate systems. b. Manipulate scalars and vectors using vector algebra, vector components, unit vectors, and vector operations. 20. Analyze electrostatic fields a. Apply Coulomb's law to determine electric force and electric field intensity due to point charges. b. Evaluate electric fields due to multiple point charges and continuous charge distributions (line, surface, and volume charges). 21. Apply Gauss's law

	a. Calculate electric flux density and electric field using Gauss's law for symmetric charge distributions, including point, line, surface, and volume charges. 22. Evaluate electric potential and energy a. Determine work done in moving charges. b. Analyze electric potential and potential difference in electrostatic fields. 23. Analyze conductors, dielectrics, and capacitors a. Explain electric fields in material media. b. Apply boundary conditions at dielectric-dielectric, conductor- dielectric, and conductor-free space interfaces. c. Analyze capacitance and capacitor configurations. 24. Analyze magnetostatic fields a. Apply Biot-Savart law and Ampere's circuital law to determine magnetic fields due to various current distributions. b. Analyze magnetic fields of solenoids, toroids, and coaxial transmission lines. 25. Evaluate magnetic forces, energy, and inductance a. Calculate magnetic force on moving charges and current-carrying conductors. b. Analyze magnetic flux, flux density, work, power, and inductance of conductors and toroids. 26. Analyze time-varying electromagnetic fields a. Apply Faraday's law to determine induced electromotive force. b. Understand electromagnetic induction phenomena. 27. Apply Maxwell's equations a. Use vector calculus operators and the divergence theorem. b. Derive and apply Maxwell's equations to uniform plane waves and wave propagation in free space.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part A: Mathematical Foundations (6 hours) • Coordinate systems: rectangular, cylindrical, and spherical (2 hrs) • Scalars and vectors (1 hr) • Vector algebra, vector components, unit vectors (2 hrs) • Vector addition, subtraction, and multiplication (1 hr) Part B: Electrostatics (9 hours) • Coulomb's law and electric force (2 hrs) • Electric field intensity (1 hr) • Electric field of a point charge and multiple point charges (2 hrs) • Electric fields due to continuous charge distributions: - o Line charge (2 hrs)

- o Surface and volume charges (2 hrs)

Part C: Electric Flux Density and Gauss's Law (6

hours)

- Electric flux and electric flux density (1 hr)
- Gauss's law: theory and physical interpretation (1 hr)
- Applications of Gauss's law:
 - o Point charge (1 hr)
 - o Line charge (1 hr)
 - o Surface charge (1 hr)
 - o Volume charge (1 hr)

Part D: Electric Potential and Material Media (6 hours)

- Work done in moving a point charge (1 hr)
- Electric potential and potential difference (2 hrs)
- Conductors and dielectrics: electric fields in material space (1 hr)
- Boundary conditions:
 - o Dielectric-dielectric
 - o Conductor-dielectric
 - o Conductor-free space (1 hr)
- Capacitance and capacitors (1

hr) Part E: Magnetostatics (9 hours)

- Static magnetic fields and magnetic field concepts (1 hr)
- Biot-Savart law (2 hrs)
- Magnetic field due to different current distributions (1 hr)
- Right-hand rule (0.5 hr)
- Solenoids and applications (1.5 hrs)
- Toroids (1 hr)
- Ampere's circuital law and applications (2 hrs):
 - o Infinite line current
 - o Infinite sheet of current
 - o Infinitely long coaxial transmission

line Part F: Magnetic Forces and Inductance (5 hours)

- Magnetic flux and magnetic flux density (1 hr)
- Magnetic force on a moving charge (1 hr)
- Work and power in magnetic fields (1 hr)
- Inductance:
 - o Inductance of a conductor (1 hr)
 - o Inductance of a toroid (1 hr)

	Part G: Time-Varying Fields and Maxwell's Equations (4 hours) - Faraday's law of electromagnetic induction (1 hr) - Induced electromotive force (1 hr) - Vector operator (del) and divergence theorem (0.5 hr) - Derivation and applications of Maxwell's equations (1.5 hrs) Part H: Electromagnetic Waves (2 hours) - Uniform plane waves (1 hr) - Wave propagation in free space (1 hr) Part I: Revision and Examination Preparation (3 hours) - Comprehensive revision - Problem-solving and exam-oriented examples

	Final Exam	3hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المناهج الاسبوعي النظري

	Material Covered
Week 1	coordinate systems: rectangular coordinate system, cylindrical coordinate system, spherical coordinate system. vector analysis: scalars and vectors.
Week 2	Vector analysis: vector algebra, vector components and unit vectors, vector addition and subtraction. vector multiplication. coulomb's law and electric force: the experimental law of coulomb.
Week 3	Electric field intensity: electric field of a point charge, electric field of n point charges. Electric fields due to continuous charge distributions: electric field of a line charge. electric field of a volume of charge.
Week 4	Electric flux density and gauss's law: gauss's law application on a point charge, gauss's law application on a line charge.
Week 5	Electric flux density and gauss's law: gauss's law application on a surface charge. electric flux density and gauss's law: gauss's law application on a volume charge.
Week 6	Work, potential & potential difference: work done in moving a point charge. work, potential & potential difference: potential & potential difference. Conductors, dielectrics, and capacitance: electric fields in material space. conductors, dielectrics, and capacitance.

Week 7	dielectric – dielectric boundary conditions, conductor – dielectric boundary conditions, conductor – free space boundary conditions. Conductors, dielectrics, and capacitance: capacitance and capacitors.
Week 8	Magneto-statics: the static magnetic fields, biot-savart law. magnetic field due to different current distributions. right-hand rule. solenoid, applications of solenoid, toroid. ampere's circuital law, applications of ampere's law. applications of ampere's law: infinite line current, infinite sheet of current. infinitely long coaxial transmission line.
Week 9	Magneto-statics: magnetic flux and magnetic flux density. inductance: inductance of a conductor, inductance of toroid.
Week 10	Magnetic forces, work & power: force on a moving charge. work and power.
Week 11	Magnetic forces, work & power: power. time varying fields: faraday's law. time varying fields: induced electromotive force.
Week 12	Maxwell's equations: the vector operator (del) and the divergence theorem
Week 13	Maxwell's equations: derivation of Maxwell's equations and applications.
Week 14	Maxwell's equations: the uniform plane wave.
Week 15	Maxwell's equations: wave propagation in free space.
Week 16	Preparatory week before the final Exam

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	1. To understand the principle of transformers, E.M.F and transformer construction. 2. To understand and study transformer on no load and on load. 3. To understand the transformer equivalent circuit and Separation of core losses. 4. To study the Regulation of transformer, Losses and efficiency. 5. To study the Parallel operation of transformer, Three-phase transformer, connections and cooling of transformers.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Identify the principle of transformers. 2. Identify the transformer on no load and on load. 3. Identify the Regulation of transformer, Losses and efficiency. 4. Summarize the Parallel operation of transformer, Three-phase transformer.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Transformers working, principle of transformers. Transformer construction, E.M.F equation. Transformer on no load and on load. Transformer equivalent circuit. Open and short circuit test. Separation of core losses. Regulation of transformer. Losses and efficiency. All-Day efficiency. Auto transformer. Parallel operation. Three-phase transformer, connections. Open-Delta Scott connection, cooling of transformers.

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Introduction and Applications of Transformers. - Basic Concepts: Understanding electromagnetism, Faraday's law, and mutual induction. - Construction and Working Principle: Core Design: Material selection, core type, and core design considerations.
	- Winding Design: Materials, insulation, and layout. - Thermal Design: Cooling methods, temperature rise, and thermal performance.
Week 2	Types of Transformers: Step-up, step-down, power, distribution, and instrument transformers.
Week 3	Transformer Parameters Equivalent Circuit: Deriving the equivalent circuit parameters.
Week 4	Transformer Parameters Impedance and Losses: Core losses (hysteresis and eddy current), copper losses, and efficiency.
Week 5	Transformer Testing - Open Circuit Test: Determining core losses and magnetizing reactance. - Short Circuit Test: Determining copper losses and leakage reactance. - Polarity Test: Importance and procedure for testing polarity.

Week 6	Transformer Testing • Polarity Test: Importance and procedure for testing polarity.
Week 7	Mid-term Exam
Week 8	Transformer Performance • Efficiency: Calculating efficiency under different load conditions.
Week 9	Transformer Performance
	• Voltage Regulation: Importance, calculation, and factors affecting voltage regulation. • Load Characteristics: Performance under varying loads.
Week 10	Transformer Performance All day efficiency
Week 11	Transformer Theory • Ideal Transformer: Assumptions, voltage transformation ratio, and basic equations. • EMF Equation: Derivation and significance. • Turns Ratio and Voltage Regulation: Impact on performance and efficiency.
Week 12	Three-Phase Transformers • Connections: Y-Y, Y-Δ, Δ-Y, Δ-Δ connections, and phase shift implications.
Week 13	Three-Phase Transformers • Parallel Operation: Conditions for successful parallel operation, load sharing, and voltage regulation. • Open-Delta and Scott Connection
	Special Transformers

Week 14	Autotransformers: Construction, working principle, advantages, and disadvantages.
Week 15	Special Transformers - Instrument Transformers: Current transformers (CTs) and potential transformers (PTs) for measurement and protection. - Isolation Transformers: Applications and significance in safety.
Week 16	Preparatory week before the final Exam

Module Aims, Learning Outcomes and Indicative Contents
--

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	15. To develop problem solving skills of electronic circuit through the understanding solid state for each electronic passive and active elements such as RLC, diodes, transistors, and integrated circuits. 16. To understand the Basic Transistor Construction through graphical analysis of transistors Connections and biasing. 17. This course deals with the basic concept of the small-signal analysis of the transistors such as D.C. and A.C. Equivalent Circuits. 18. To understand the Load Line Analysis, Operating Point Transistor Parameters, and Rating Amplification Stabilization. 19. To understand the H-parameters, Hybrid Equivalent Circuit. Z-parameters, R-parameters Equivalent Circuit. 20. To perform current-voltage characteristics, charge control description for all types of both the diode and transistors. 21. To Describe and operation of the Multistage Transistor Amplifiers
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	28. Recognize the regions of operation, graphical analysis of BJT, regions of operation stability. 29. List the various terms associated with bias configuration of the transistors. 30. Summarize what is meant of the practical circuit of transistor amplifier. 31. Describe the types of multistage amplifiers. 32. Discuss the various properties of transistors used as an amplifier 33. Explain the transistor construction and operation such as amplifier and switching. 34. Explain the operation of the linear amplifier through the a.c. load line and DC load line analysis.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A - Transistor Construction, Operation, and Stabilization</u> Transistor Construction. Transistor Symbols. Transistor Operation. Transistor Connections: Common Base CB Connection, Common Emitter CE Connection, Transistor Curves, Cutoff and

	Saturation. Transistor as a switch. Common Collector Connection. Transistor Load Line Analysis, Operating Point, Transistor Parameters and Rating Amplification. Stabilization, Stability Factor Methods of Transistor Biasing. [15 hrs.] Revision problem and tutorial classes [5 hrs.] Quizzes [1 hr.]
	<u>Part B- D.C and A.C Equivalent Circuits of the transistors</u> Practical Circuit of Transistor Amplifier, D.C. and A.C. Equivalent Circuits. Transistor ac Equivalent Circuits h-parameters, Hybrid Equivalent Circuit. r-parameters, r-parameters Equivalent Circuit. The Linear Amplifier. [15 hrs.] Revision problem and tutorial classes [5 hrs.] Quizzes [1 hr.]
	<u>Part C- Transistor Bias Configuration and Multistage Transistor Amplifiers</u> The a.c. Load Line, A.C. Analysis Using re Model for Transistor Common Emitter Fixed Bias Configuration, Common-Emitter Emitter Bias Configuration, Common – Emitter Collector Feedback Configuration, Common – Emitter Voltage Divider Configuration. The Common – Collector Amplifier, the Common – Base Amplifier. Multistage Transistor Amplifiers. [15 hrs.] Revision problem and tutorial classes [5 hrs.] Quizzes [1 hr.]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.
-------------------	---

Student Workload (SWL)

الحمل الدراسي للطالب محسوب لـ ١٥ اسبوعا

Structured SWL (h/sem)		Structured SWL (h/w)	
الحمل الدراسي المنتظم للطالب	63	الحمل الدراسي المنتظم	4

Unstructured SWL (h/sem) الحمل الدراسي غير المنتظم للاطلاب خلال الفصل	37	Unstructured SWL (h/w) الحمل الدراسي غير المنتظم للاطلاب أسبوعيا	2
Total SWL (h/sem) الحمل الدراسي الكلي للاطلاب خلال الفصل	100		

Module Evaluation

تقييم المادة الدراسية

		Time/ Number	Weight (Marks)	Week Due	Relevant Learning Outcome
Formative assessment	Quizzes	3	15% (5)	4,8,14	LO #1, 4, 6 and 7
	Assignments	3	12% (4)	2 to 13	LO #1, 2, 3, 4, 5 and 7
	Onsite Assignments	1	5% (5)	----	-----
	Report	1	8% (8)	Continuous	All
Summative assessment	Midterm Exam	2 hr	10% (10)	7	LO # 4-7
	Final Exam	3hr	50% (50)	16	All
Total assessment			100% (100 Marks)		

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Transistor Construction. Transistor Symbols. Transistor Operation.
Week 2	Transistor Connections: Common Base CB Connection, Common Emitter CE Connection.
Week 3	Transistor Curves, Cutoff and Saturation. Transistor as a switch. Common Collector Connection.

Week 4	Transistor Load Line Analysis, Operating Point, Transistor Parameters and Rating Amplification.
Week 5	Stabilization, Stability Factor Methods of Transistor Biasing.
Week 6	Practical Circuit of Transistor Amplifier.
Week 7	D.C. and A.C. Equivalent Circuits. Transistor ac Equivalent Circuits.
Week 8	Transistor ac Equivalent Circuits h-parameters, Hybrid Equivalent Circuit.
Week 9	Transistor ac Equivalent Circuits, r-parameters, r-parameters Equivalent Circuit.
Week 10	The Linear Amplifier.
Week 11	The a.c. Load Line, A.C. Analysis Using re Model for Transistor Common Emitter Fixed Bias Configuration.
Week 12	The a.c. Load Line, A.C. Analysis Using re Model for Transistor Common – Emitter Emitter – Bias Configuration, Common – Emitter Collector Feedback Configuration.
Week 13	The a.c. Load Line, A.C. Analysis Using re Model for Transistor Common – Emitter Voltage Divider Configuration.
Week 14	The Common – Collector Amplifier, the Common – Base Amplifier.
Week 15	Multistage Transistor Amplifiers.
Week 16	Preparatory week before the final Exam

Learning and Teaching Resources

مصادر التعلم والتدريس

	Text	Available in the Library?
Required Texts	Floyd, Thomas L. Electronics Fundamentals: Circuits, Devices and Applications (Floyd Electronics Fundamentals Series). Prentice-Hall, Inc., 2006.	Yes
Recommended Texts	Donald A. Neamen. (2003). "SEMICONDUCTOR PHYSICS AND DEVICES". 3rd Edition, ISBN 0-07-232107-05, USA. (can be downloaded from the Course web page/classroom).	Yes
Websites	Nashelsky, L., & Boylestad, R. L. (2021). Electronic Devices and Circuit Theory Eleventh Edition.	

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX - Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F - Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	22. To handle laboratory equipment and electrical elements professionally and scientifically. 23. To analyze electrical circuits and comprehend their operational principles. 24. To cultivate a scientific mindset in the student by interpreting practical results based on theoretical concepts. 25. To enhance the student's capability to design basic electronic circuits in accordance with their scientific aptitude. 26. To analyze and simulate circuit processes using various software tools on electronic calculators and compare the analysis results with practical outcomes.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	35. Dealing with laboratory equipment and electrical elements in a professional and scientific manner(i). 36. Ability to analyze electrical circuits and understand the nature of their work(ii). 37. Building a scientific mentality for the student through his ability to interpret the practical results according to theoretical concepts(iii). 38. Develop the student's ability to design simple electronic circuits in line with his scientific abilities(iv). 39. Analyze and simulate the process circuit using different software on the electronic calculator and match the results of the analysis with the practical results(v).
Indicative Contents المحتويات الإرشادية	Indicative content includes the following.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	1- تنمية مهارات الطلبة في استخدام اللغة العربية استخدامًا سليمًا في السياقات الأكاديمية والعلمية. 2- تمكين الطلبة من فهم النصوص العلمية والهندسية المكتوبة باللغة العربية وتحليلها. 3- تطوير قدرة الطلبة على التعبير الكتابي والشفهي بأسلوب واضح ودقيق. 4- تعزيز مهارات الكتابة الوظيفية المرتبطة بالتخصص الهندسي مثل التقارير والمراسلات الرسمية. 5- ترسيخ قواعد اللغة العربية الأساسية بما يخدم التواصل العلمي والمهني. 6- تنمية مهارات التفكير النقدي والتحليل اللغوي لدى الطلبة. 7- تعزيز الثقة بالنفس في استخدام اللغة العربية في العروض والمناقشات العلمية.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1- يميز بين بناء الفعل للمعلوم وبناءه للمجهول، ويستخدم كليهما استخدامًا صحيحًا في الجمل والنصوص الوظيفية. 2- يتعرف على أقسام الأفعال في اللغة العربية (ماضي، مضارع، أمر) ويفرق بينها من حيث الصيغة والدلالة والاستعمال. 3- يحدد علامات الجزم وعلامات النصب للأفعال المضارعة، ويطبقها تطبيقًا سليمًا في الكتابة الأكاديمية. 4- يستخدم الأعداد في اللغة العربية استخدامًا صحيحًا من حيث التذكير والتأنيث، والإعراب، وتمييز العدد. 5- يفرق بين حرفي الضاد والطاء نطقًا وكتابةً، ويتجنب الأخطاء الشائعة المرتبطة بهما. 6- يوظف علامات الترقيم توظيفًا صحيحًا في النصوص الكتابية بما يحقق الوضوح والدقة في المعنى. 7- يتعرف على الأغلاط اللغوية الشائعة في الاستعمال الكتابي والشفهي، ويصححها وفق القواعد اللغوية. 8- يميز بين المفعول فيه (الظرف) والمفعول معه من حيث التعريف والدلالة والإعراب. 9- يعرب الجمل التي تحتوي على المفاعيل المختلفة إعرابًا صحيحًا. 10- يطبق القواعد النحوية المدروسة في صياغة جمل ونصوص علمية ووظيفية سليمة لغويًا. 11- ينمي مهارته في التحليل اللغوي وربط القاعدة بالتطبيق العملي. 12- يظهر دقة لغوية ومسؤولية أكاديمية في الكتابة والتعبير
Indicative Contents المحتويات الإرشادية	بناء الفعل في اللغة العربية

• تعريف الفعل المعلوم والفعل المجهول

• صيغ بناء الفعل للمعلوم

• صيغ بناء الفعل للمجهول

• تحويل الفعل من المعلوم إلى المجهول

• تطبيقات لغوية من نصوص علمية

• ووظيفية 2. أقسام الأفعال في اللغة

العربية

• الفعل الماضي: خصائصه ودلالته

• الفعل المضارع: خصائصه ودلالته

• فعل الأمر: صوغه واستعماله

• دلالة الزمن في الأفعال

• تطبيقات عملية على استعمال

الأفعال 3. نصب الفعل المضارع

وجزئه

• أدوات نصب الفعل المضارع

• علامات النصب الأصلية والفرعية

• أدوات جزم الفعل المضارع

• علامات الجزم الأصلية والفرعية

• الفرق بين النصب والجزم في الاستعمال

• تمارين تطبيقية

• وإعرابية 4. الأعداد في

اللغة العربية

• تعريف العدد وتمييزه

• أنواع الأعداد (المفردة، المركبة، المعطوفة، العقود)

• تذكير العدد وتأنيثه

• إعراب الأعداد وتمييزها

• أخطاء شائعة في استعمال الأعداد

• تطبيقات من السياقات العلمية

والهندسية 5. الضاد والطاء

• الفرق الصوتي والكتابي بين الضاد والطاء

	• مواضع شيوخ كل حرف • كلمات شائعة يخطئ فيها الطلبة • تدريبات على النطق والكتابة • الصحيحة 6. علامات الترقيم • مفهوم علامات الترقيم وأهميتها • الفاصلة، الفاصلة المنقوطة، النقطة • علامة الاستفهام والتعجب • النقطتان، الأقواس، الشرطة • توظيف علامات الترقيم في النصوص • العلمية 7. الأغلاط اللغوية الشائعة • أخطاء نحوية شائعة في الكتابة • أخطاء إملائية وصرفية • أخطاء في التراكيب والأساليب • أساليب تصحيح الأخطاء • اللغوية 8. المفاعيل في اللغة العربية • المفعول فيه (الظرف): تعريفه وأنواعه • المفعول معه: تعريفه ودلالته • الفرق بين المفعول فيه والمفعول معه • إعراب المفاعيل وتطبيقاتها • أمثلة من النصوص العلمية • والوظيفية 9. التطبيقات اللغوية • تحليل نصوص مختارة • إعراب جمل مختارة • كتابة جمل ونصوص قصيرة وفق القواعد المدروس

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	This course equips students with the skills to analyze circuits in the S-domain, apply transfer functions, and calculate system outputs using partial fractions and convolution. It covers sinusoidal steady-state response, frequency response, and the design of first-order RL and RC filters. Students will study resonance in series and parallel circuits, Bode plot scaling, and key parameters like resonant frequency, Q-factor, and bandwidth. The course also introduces passive and active filter design, the use of OPAMPs as amplifiers and buffers, and the implementation of Butterworth and cascaded filters for practical applications.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Analyze electrical circuits in the S-domain using Laplace transform techniques. 2. Apply transfer functions to model linear systems and determine their dynamic behavior. 3. Calculate system outputs using partial fraction expansion and convolution methods. 4. Analyze sinusoidal steady-state responses and evaluate circuit behavior in the frequency domain. 5. Design and analyze first-order RL and RC filters and assess their performance characteristics. 6. Understand and analyze resonance phenomena in series and parallel RLC circuits. 7. Interpret and construct Bode plots, including magnitude and phase scaling. 8. Evaluate key resonance parameters such as resonant frequency, quality factor (Q-factor), and bandwidth. 9. Design and implement passive and active filters for practical engineering applications. 10. Use operational amplifiers (OPAMPs) as amplifiers and buffers in analog circuit design.
	11. Design and analyze Butterworth filters and cascaded filter structures to meet specific frequency response requirements.
	1. Transient response of first-order RL and RC circuits: natural response and complete response. [12 hrs.]

Indicative Contents المحتويات الإرشادية	2. Forced and natural response of first-order RL and RC circuits: general response and sequential switching. [12 hrs.] + [1 hr. Quiz] 3. Transient response of second-order RLC circuits: natural response of series RLC circuits. [12 hrs.] + [1 hr. Quiz] 4. Analysis of overdamped, underdamped, and critically damped RLC circuits. [12 hrs.] 5. Mutual inductance: self-inductance and mutual inductance equations. [12 hrs.] 6. Magnetic coupling: coefficient of coupling and linear transformer. [12 hrs.] + [1 hr. Quiz] 7. Ideal transformer models: T-model and π -model, impedance matching. [12 hrs.] 8. Two-port networks and their applications. [12 hrs.] + [1 hr. Quiz]

	Final Exam	3 hr.	50% (50)	15	All
Total assessment			%100		

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Analysis of circuits in S-domain circuit elements.
Week 2	Applications the transfer function.
Week 3	Output calculation using partial fraction.
Week 4	Output calculation using convolution integral.
Week 5	Sinusoidal steady state response from TF.
Week 6	Frequency Response.
Week 7	First- Order RL and RC filters.
Week 8	Series resonance other resonance from scaling bode plots.
Week 9	Parallel RLC resonant circuit resonant frequency: Q-factor, bandwidth cutoff frequencies.
Week 10	Passive filter design.
Week 11	Active filter design.
Week 12	First – order low- pass and high – pass filter.
Week 13	The use of OPAMP as amplifier and Buffer.
Week 14	Butterworth filter.

Week 15	Cascaded filter.
Week 16	Preparatory week before the final Exam

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX - Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F - Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	27. To develop problem-solving of Eigenvalues and eigenvectors 28. To understand Laplace Transforms. 29. This course deals with the basic concept of DC electrical circuits. 30. To understand the application of Laplace Transforms in electronic circuits. 31. To understand the Fourier, transform and their applications in electrical engineering
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Recognize Eigenvalues and eigenvectors. 2. Summarize series and series geometric. 3. Identify the Laplace Transforms. 4. Identify the Fourier transform their applications. 5. Identify the application in Electrical Circuits.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Eigenvalues and eigenvectors; diagonalization. Sequence and series, sequence convergence, series geometric series, nth partial sum, test of convergence, Laplace Transforms: Introduction to transforms and operators, Laplace transforms of basic functions; unit step function, transforms of 1st and 2nd derivatives, Application to electric circuits; Transforms of piecewise continuous functions Inverse Laplace transforms, derivation using partial fractions. Direct (s-domain) analysis of electrical circuits, Interpretation of s-domain functions Initial & final value theorems.
	Fourier transform for different functions (unit step function, unit impulse function, singularity function, applications in electrical engineering. Fourier transform for different functions (unit step function, unit impulse function, singularity function, applications in electrical engineering.

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents			
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	Power Distribution Systems: The module aims to familiarize students with the distribution of electrical power from the transmission grid to end-users. It covers distribution network design, components, and operation, including substations, distribution transformers, switchgear, and protection systems. Students learn about the challenges associated with distribution system operation, such as voltage regulation, power quality, and reliability.		
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon completion of the course, the student will be able to: 1. Familiarity with Power Distribution Systems: Students will gain a solid understanding of power distribution systems, including network design, components, and operation. They will become knowledgeable about substations, distribution transformers, switchgear, and protection systems. They will understand the challenges associated with voltage regulation, power quality, and system reliability in distribution networks. 2. Students will be able to apply engineering principles and concepts to solve practical problems related to distribution systems. They will develop problem-solving skills and apply their knowledge to design efficient and reliable power systems, address system vulnerabilities, and optimize system performance.		
	Indicative content includes the following.		

Indicative Contents المحتويات الإرشادية	<u>Distribution Systems:</u> Introduction, Classification of Distribution System, Methods of Connection, Comparison among Distribution Systems, Type of D.C Distributions: D.C Distributor fed at One End-Concentrated Loading, D.C Distributor fed at Both End-Concentrated Loading, D.C Distributor fed at One End with Uniformly Distributed Load, D.C Distributor fed at Both Ends with Uniformly Distributor Load, D.C Ring Distributor, Ring Distributor with Inter-Connector, Stepped Distributor, Classification of A. C. Distribution Systems. Methods of Connection, Single Phase Distribution Systems, Three Phase Distribution Systems. Types of A. C. Distribution Systems. A. C. Radial Systems: A. C. Distributor fed at one end. A. C. Distributor fed at both ends. A. C. Ring Systems Protection of Distribution Systems, Distribution Transformers, Types of Sub-Stations, Sub-Stations Measurements Devices. [24 hrs.] Revision problem and tutorial classes [6 hrs.] Quizzes [3 hr.]

Module Aims, Learning Outcomes and Indicative Contents
--

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	- Understanding the physical and engineering principles underlying technologies for converting renewable energy into usable electrical or thermal energy. - Enabling students to analyze renewable energy resources and assess their potential in different regions, especially in hot and arid environments like Iraq. - Giving students basic skills in designing renewable energy systems (such as photovoltaic solar systems). - Developing the ability to evaluate the performance and efficiency of renewable energy systems through technical calculations and operational data. - Familiarizing students with the economic and environmental aspects of renewable energy projects, such as investment costs, payback periods, and emissions reduction. - Enhancing students' awareness of the role of renewable energy in sustainable development and energy security. - Preparing students to review global standards and trends in renewable energy issued by international organizations such as the International Renewable Energy Agency (IRENA).
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	By the end of the course, the student will be able to - analyze renewable energy resources, - design simple systems based on them, - evaluate their performance and economic and environmental feasibility, - link theoretical aspects to practical applications in the local context.
Indicative Contents المحتويات الإرشادية	W1 Understanding Electrical Energy and Its Sources - The concept of energy and its forms - Classification of energy sources

- Definition of electrical energy and electrical power
- Mathematical questions

W2 Introduction to Renewable Energy Sciences

- Introduction to Traditional and Renewable Energy Sources
- Motivations for the Transition to Renewable Energy
- Energy Challenges in the World and Iraq
- Advantages and Disadvantages of Renewable Energy
- Understanding the Concept of Energy Security
- Reviewing Statistics Issued by the International Renewable Energy Agency (IRENA).

W3 Solar and Photovoltaic Energy

- Principle of photovoltaic conversion
- Types of solar cells
- Current-voltage (I-V) and power-voltage (PV) curves
- Effect of temperature and radiation
- Series and parallel connections
- Calculation of voltage, current, and power
- Standard rating factors (STC)

W4 Solar thermal energy

- The concept of solar thermal energy and the difference between it and photovoltaic solar energy
- The principle of converting solar radiation into thermal energy
- Types of solar thermal energy systems:
- Types of solar thermal collectors:
- Basic components of a solar thermal system:
- Methods of storing thermal energy
- Factors affecting system performance:
- Technical and environmental advantages of solar thermal energy
- Technical and economic challenges
- Suitability of solar thermal energy systems for hot and arid environments (such as Iraq)

W5 wind energy

- Wind Turbine Working Principle
- Types of Wind Turbine Farms

- Turbine Power Curve
- Cutoff, Input, and Output Speeds
- Selecting the Right Site
- Calculating Power Generation

W6 Hydroelectric energy

- The Concept of Hydropower and Its Importance in Renewable Energy Systems
- The Principle of Converting Water Energy into Mechanical Energy and then into Electrical Energy
- Basic Components of a Hydropower Plant
- Types of Hydropower Plants
- Types of Water Turbines
- Factors Affecting Power Generation
- The Basic Equation for Calculating Hydropower

W7 Geothermal energy

- The concept of geothermal energy and its natural sources
- The Earth's thermal structure and geothermal heat sources
- The principle of converting geothermal energy into electrical energy
- Types of geothermal resources
- Types of geothermal power plants
- Basic components of a geothermal power plant
- Direct uses of geothermal energy

W8 Tidal energy (ocean energy)

- The concept of ocean energy and its main types
- The concept of tidal energy and its physical source
- The principle of converting tidal energy into electrical energy
- Tidal energy utilization methods and technologies
- Basic components of a tidal energy system
- Operating principle of tidal turbines
- Characteristics of the energy resource

W9 Biofuel energy

- The Concept of Biofuels and Their Importance in Renewable Energy Systems
- Sources of Biofuels (Agricultural Crops, Agricultural Waste, Organic Waste)
- Types of Biofuels
- Biofuel Production Technologies

- Different Generations of Biofuels (First, Second, and Third Generation)
- Physical and Energy Properties of Biofuels
- Comparison of Biofuels to Fossil Fuels

W10 Storage system

- The Concept of Energy Storage and Its Importance in Renewable Energy Systems
- The Role of Storage Systems in Addressing the Fluctuations of Renewable Energy Sources
- Classification of Energy Storage Systems
- Electrochemical Storage Systems
- Mechanical Storage Systems
- Thermal Storage Systems
- Chemical (Hydrogen) Storage Systems
- Basic Components of Storage Systems
- Key Performance Indicators (KPIs) for Storage Systems

W11 hydrogen fuel cell

- Introduction to Hydrogen as an Energy Carrier
- The Concept and Principle of Operation of a Hydrogen Fuel Cell
- Electrochemical Reactions within a Fuel Cell
- Types of Fuel Cells (PEMFC, SOFC, AFC, MCFC)
- Basic Components of a Fuel Cell System
- Performance and Efficiency Characteristics of Fuel Cells
- Methods of Hydrogen Production
- Methods of Hydrogen Storage and Transportation
- Integrating Fuel Cells with Renewable Energy Systems
- Applications of Hydrogen Fuel Cells (Transportation, Buildings, Standby Systems, Backup Generation)

W12 Hybrid Renewable Energy Systems

- The Concept of Hybrid Systems
- Combining Solar with Wind or Diesel
- Control Strategies
- Improving Reliability

W13 Economic Aspects of Renewable Energy Projects

- Investment Costs
- Operating and Maintenance Costs
- Backup Period
- Comparison of Renewable and Conventional Systems

	W14 Environmental and Social Impacts and Supporting Policies • Emissions Reduction • Impact on Rural Development • The Role of Policies and Legislation • The Role of International Organizations such as the International Renewable Energy Agency and the International Energy Agency W15 Case study and practical application of a renewable energy project • Real site analysis • Resource estimation • Selection of the appropriate system • Presenting and discussing design results
--	--

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1. Lectures • Structured lectures introduce fundamental concepts, theories, and analytical techniques . • Emphasis is placed on conceptual understanding, mathematical formulation, and physical interpretation. 2. Problem-Solving Sessions • Active student participation is encouraged through in-class discussions. • Forming groups of students to prepare specialized reports on the scientific subject and present them during discussion sessions with the students. 3. Self-Directed Learning • Students are encouraged to engage in independent study through textbooks, research papers, and online resources. • Homework assignments and reading tasks support deeper understanding. 4. Continuous Feedback • Regular formative feedback is provided through assignments, quizzes, and reports. • Feedback helps students identify strengths and areas for improvement.

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX - Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F - Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	This course deals with general and different topics in the fields of electronic and power within the framework of the student's curriculum and includes practical experiences in studying the characteristics of the diode and its applications and the types of connection of the transistor and its advantages. This course also covers the study of transient conditions in electrical circuits and transformer tests and DC machines
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	This course designed to develop the students' abilities about using the different measurement equipment's that necessary to execute the practical experiments. Also this course covered the need of students to investigate the theoretical subjects according to practical method that's will improve the scientific level of students through this course By the end of this course, student should be able to: • Dealing with laboratory equipment and electrical elements in a professional and scientific manner(i). • Ability to analyze electrical circuits and understand the nature of their work(ii). • Building a scientific mentality for the student through his ability to interpret the practical results according to theoretical concepts(iii). • Develop the student's ability to design simple electronic circuits in line with his scientific abilities(iv). • Analyze and simulate the process circuit using different software on the electronic calculator and match the results of the analysis with the practical results(v).
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part A - Circuit Components and values DC circuits, Current and voltage definitions, Passive sign convention and circuit elements,

	Resistive networks, real and ideal elements, voltage and current sources. [9 hrs.] Lab. [6 hrs.] Revision problem and tutorial classes [6 hrs.] Quizzes [1 hr.] Part B- Circuit reduction combining sources, Combining resistive elements in series and parallel, delta and star transformation. [12 hrs.] Revision problem and tutorial classes [8 hrs.] Lab. [8 hrs.] Quizzes [1 hr.] Part C- Circuit Theory Kirchhoff's laws and Ohm's law. Introduction to mesh and nodal analysis, Introduction to thevenin and Norton theory, maximum power transfer, introduction to superposition theory. [24 hrs.] Revision problem and tutorial classes [16 hrs.]

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
	1. Introduction to power transmission systems: The module aims to provide an

Module Aims أهداف المادة الدراسية	overview of power transmission systems, including their importance in electrical power distribution networks. Students learn about the role of power transmission in delivering electricity from power plants to distribution substations. 2. Study of transmission system components: The module aims to familiarize students with the various components of a power transmission system. This may include topics such as transformers, circuit breakers, transmission lines, insulators, and protective devices. Students learn about the functions, characteristics, and operational considerations of these components. 3. Understanding transmission line parameters: The module aims to provide an understanding of transmission line parameters such as resistance, inductance, capacitance, and conductance. Students learn how these parameters affect the performance and efficiency of power transmission systems. 4. Safety and environmental considerations: The module aims to emphasize safety practices and environmental considerations associated with power transmission systems. Students learn about safety protocols, grounding techniques, electromagnetic fields, and environmental impacts of transmission line construction and operation.
	5. Practical application and problem-solving: The module aims to develop practical skills in students for designing, analyzing, and troubleshooting power transmission systems. This may involve laboratory experiments, simulation exercises, case studies, and projects to reinforce theoretical concepts.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon completion of the course, the student will be able to: 1. Demonstrate knowledge and understanding of the principles, theories, and concepts related to power transmission systems. 2. Explain the role and importance of power transmission systems in electrical power distribution networks. 3. Identify and describe the components of power transmission systems, such as transformers, circuit breakers, transmission lines, and protective devices. 4. Understand the parameters and characteristics of transmission lines, including resistance, inductance, capacitance, and conductance. 5. Apply problem-solving skills to troubleshoot and resolve issues related to power transmission system operation and performance. 6. Apply knowledge of power system reliability and maintenance techniques to ensure the proper functioning of transmission systems. 7. Utilize appropriate tools and techniques to analyze and improve the efficiency and reliability of power transmission systems.
	Indicative content includes the following. Introduction of Transmission Systems: Choice of Transmission Voltage, Overhead Transmission

Indicative Contents المحتويات الإرشادية	Lines (OHTL), Electrical Calculations of OHTL, Mechanical calculations of OHTL, Insulators of OHTL, Corona. Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتقات الإرشادية

Module Aims أهداف المادة الدراسية	1. Understand the concept of rotating magnetic field and understand the principles of the rotating AC machines (induction machines and synchronous machines). 2. Understand and know how to use the equivalent circuit of the induction machine and the synchronous machine. 3. Understand power flows and the power flow diagram. 4. Understand the torque-speed characteristic curve. 5. Understand the philosophy and benefits of speed control methods, starting methods and braking methods. 6. Understand the induction machine used as a generator. 7. Understand the phasor diagrams for a synchronous machine. Understand the equations for power and torque in a synchronous machine, understand how terminal voltage varies with load in a synchronous generator operating alone. 8. Understand the conditions required to parallel two or more synchronous generators, and understand the operation of synchronous generators in parallel with infinite bus. 9. Understand the static stability limit of a synchronous generator. Understand synchronous machine ratings, and what condition limits each rating value. 10. Understand the effect of governor set point changing, load changing and field current changing on the synchronous machine variables. 11. Understand how and why power factor varies as synchronous motor field current varies -the "V" curve.
	Upon successful completion of this module, students will be able to: 1- Explain the concept of a rotating magnetic field and its significance in AC machines. 2- Demonstrate a comprehensive understanding of the principles underlying the operation of induction machines and synchronous machines. 3- Apply equivalent circuit models to analyze and predict the behavior

Module Learning Outcomes مخرجات التعلم للمادة الدراسة	of induction machines and synchronous machines. 4- Analyze power flows and power flow diagrams in AC machines, considering factors affecting power transfer and distribution. 5- Interpret and analyze torque-speed characteristic curves, enabling the prediction of machine performance under different operating conditions. 6- Evaluate and understand the operation of induction machines as generators, including considerations for efficient generator mode operation. 7- Construct and interpret phasor diagrams for synchronous machines, and use them to analyze and predict machine behavior. 8- Formulate equations for power and torque in synchronous machines and demonstrate an understanding of how terminal voltage varies with load in a synchronous generator operating independently. 9- Identify and comprehend the conditions required for parallel operation of synchronous generators, and evaluate the operation of synchronous generators in parallel with an infinite bus. 10- Assess the static stability limit of synchronous generators and understand synchronous machine ratings, recognizing the factors that limit each rating value. 11- Analyze the effect of changing governor set points, loads, and field currents on synchronous machine variables, and predict the impact of these changes on machine performance. 12- Analyze the relationship between synchronous motor field current and power factor variations using the "V" curve, explaining how and why power factor varies in synchronous motors.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A: Overview [10hr]</u> 1- Introduction to AC Machines. - Overview of AC machines and their importance in electrical engineering . - Historical background and development of AC machines 2- Rotating Magnetic Field -Concept of a rotating magnetic field -Generation and properties of a rotating magnetic field <u>Part B: Induction Machines [25 hr]</u> -Construction and working principles of induction machines
	-Induction machine equivalent circuit. -Power and torque equations in induction motor -Torque-speed characteristics of induction machines. -speed control methods of induction motor. -Finding equivalent circuit parameters.

	-Induction machine as a generator. <u>Part C: Synchronous Machines [40 hrs]</u> -Construction and working principles of synchronous machines -Synchronous machine equivalent circuit -Phasor diagrams for synchronous machines -Power and torque equations in synchronous machines and Power Flow Diagrams -Variation of terminal voltage with load in synchronous generators -Synchronous Generators operating alone. -Parallel Operation of Synchronous Generators and Conditions required for parallel operation of synchronous generators -Operation of synchronous generators in parallel with an infinite bus -Stability and Ratings of Synchronous Generators -Effect of governor set point changes and field current changes on synchronous generator variables -Impact of load changes and field current changes on synchronous motor performance. Synchronous machine "V" Curves.

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	Lectures: Conduct regular lectures to deliver theoretical concepts and foundational knowledge. Use multimedia presentations, diagrams, and examples to enhance understanding. Encourage student participation through discussions and questions. Practical Laboratory Sessions in cooperation with the Course of the Power and Machine Lab to provide students with practical experience in operating AC machines. Case Studies and Problem-Solving Exercises: Assign case studies and problem-solving exercises that simulate real-world scenarios related to AC machines. Encourage students to apply their theoretical knowledge to analyze and solve these problems, fostering critical thinking and problem-solving skills. Group Discussions and Peer Learning: Organize group discussions and collaborative learning activities where students can discuss and share their understanding of AC

	machines. Encourage peer-to-peer teaching and learning, promoting active engagement and the exchange of ideas. Simulations and Virtual Labs: Utilize computer-based simulations and virtual labs to supplement practical learning. These tools can provide interactive experiences and allow students to experiment with different AC machine configurations and operating conditions. Guest Lectures and Industry Visits: Invite industry experts or guest lecturers to share their practical experiences and insights related to AC machines. Arrange visits to relevant industrial facilities to provide students with exposure to real-world applications and challenges. Online Resources and Learning Management Systems: Provide access to online resources, including lecture notes, reference materials, and interactive tutorials. Utilize a learning management system to facilitate communication, assignment submissions, and online discussions. Assessments: Design a variety of assessments, including quizzes, assignments, and examinations, to evaluate students' understanding of the course material. Incorporate practical assessments, such as simulation-based projects, to assess hands-on skills. Feedback and Progress Monitoring: Provide timely and constructive feedback to students on their assignments and assessments. Monitor students' progress throughout the course and offer additional support or clarification when needed. Industry-Engaged Projects: Assign project work that requires students to apply their knowledge of AC machines to real-world problems or industry-related challenges. This could involve designing a motor control system, optimizing power flows, or analyzing the performance of a synchronous generator. By employing a combination of these learning and teaching strategies, students can develop a solid theoretical understanding of AC machines while also gaining practical skills and the ability to apply their knowledge in real-world scenarios.

Delivery Plan (Weekly Syllabus) المنهاج الاسبوعي النظري	
	Material Covered
Week 1	Introducing to rotating electrical machines and their classifications, Introducing to Rotating MMF Theorem.
Week 2	Construction and characteristics of 3-phase induction motors, Equivalent circuit of three-phase induction machines.
Week 3	Power and torques in three-phase induction machines, Maximum torque and Torque-Speed characteristics.
Week 4	NEMA Design classes of induction motor rotors, Tests to obtain equivalent circuit parameters.
Week 5	Speed control, starting and braking methods of three-phase induction motors.
Week 6	Introduction to Induction generators, Induction generators operating.
Week 7	Construction and characteristics of 3-phase synchronous machines, Derive the equivalent circuit of the synchronous machines, and understand power and torques equations

Week 8	Phasor diagram of synchronous machines for different conditions
Week 9	Operating synchronous generator alone (P-F and Q-V characteristics), Conditions and advantages of parallel operation of S.G, operating with another generator.
Week 10	Parallel operation of S.G with infinite busbar, Understand the effect of Changing governor set point and changing of the field current
Week 11	Rating Limitations of Synchronous generator.
Week 12	Synchronous motors, equivalent circuit, PF control, effect of load changing and field current changing on the motor variables.
Week 13	Phasor diagrams of synchronous machine and V-curves for different cases, Starting methods of Synchronous motors
Week 14	Open and short circuit tests and obtain equivalent circuit parameters, Voltage regulation of synchronous generator
Week 15	General review.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	1. To understand what is the electrical measurements. 2. To learn what is instrumentation system. 3. To know what are the sources of errors in electrical measurements and how to fix them. 4. To familiarize the students to various types of measuring instruments and their performance characteristics. 5. To design the multi-range ammeters, voltmeters and ohmmeters for both AC and DC circuits. 6. To learn the bridges and their types and how to use them in electrical measurements. 7. To know the oscilloscopes and their applications 8. To explain what are the transducers and their types and their usage in measurements.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Student is able to understand the basic principles of measuring instruments related to Electrical Engineering and choose a proper measuring instrument suitable for any given application taking into consideration the operating conditions
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A – Electrical Measurement Principle</u> Basics, instruments classifications, linearity, Errors. Units [12 hrs.] Revision problem and tutorial classes [3 hrs.] Quizz [1 hr.] <u>Part B- Electromechanical instruments</u> Principle work, Torques types, PMMC, multi-range voltmeters, ammeters, ohmmeters, rectifier type voltmeter. [10 hrs.]

	Revision problem and tutorial classes [3 hrs.] Quizz [1 hr.] Mid-term exam [2 hr.] <u>Part C- Oscilloscope and bridges</u> Oscilloscopes and their applications, DC and AC bridges. [12 hrs.] Revision problem and tutorial classes [3 hrs.] Quizz [1 hr.] <u>Part D- Transducers</u> Transducers, types applications. [8 hrs.] Revision problem and tutorial classes [3 hrs.] Quizz [1 hr.] Final exam [3 hrs]

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	

Module Aims أهداف المادة الدراسية	12. Introduce the undergraduate students to the principle of switch-based conversion in power electronics. 13. The analysis of power components and important factors when dealing with nonsinusoidal quantities. 14. To introduce the features and characteristics the common semiconductor power switching devices. 15. To introduce the single-phase and three-phase phase-controlled power converter circuits. 16. To relate the steady state and transient analysis of phase-controlled power converter circuits to the converter performance and design. 17. To introduce the basics of AC controllers.
Module Learning Outcomes	By the completion of the course, the students should be able to: 1. Define the scope, tools types and applications of power converters. 2. Calculate the assess the figures of merits used to describe the quality of non-
مخرجات التعلم للمادة الدراسية	ideal waveforms in power electronics converters. 3. Describe the behavioral characteristics and ratings of power switching semiconductor devices such as diodes, Thyristors, MOSFETs and IGBTs. 4. Analyze single-phase and three-phase power diode circuits, evaluate input- output performance parameters with idealized load models. 5. Analyze single-phase and three-phase power SCR controlled rectifier circuits with various load models. 6. Describe and Analyze the single-phase and three-phase-AC controller circuits with R and RL loads.
	Indicative content includes the following. <u>Part A – Introduction, definitions and tools</u> Power Electronics: definitions, approach and applications. [2 hrs.] Figures of Merits: Ripple factor, Total harmonic distortion, Form factor, Power factor (non-sinusoidal waveform), conversion efficiency. [4 hrs.] Review of circuit analysis tools [6 hrs.] Quizzes [1 hr.] <u>Part B- Semiconductor Switching Devices</u> Ideal and semiconductor switching devices. Power losses in switching devices. [2hrs]

Indicative Contents المحتويات الإرشادية	Characteristics of power diodes and diode ratings, special power diodes. [2 hrs] SCR construction and principle of operation, characteristics, ratings and operation in basic circuits. Traics [4hrs] Fully controlled switching devices: GTOs, MOSFETs, IGBTs and smart power modules [3 hrs] Quizzes [1 hr.] <u>Part C- Phase-controlled AC-DC converters</u> Single-phase bridge rectifier with R, RL, C filter. Analysis of controlled rectifier with R, RLE loads. [6 hrs] Analysis of 6-pulse controlled rectifier with ideal and practical loads [10 hrs]. The effect of line inductance [4 hrs], Dual converter [2 hrs] Determination of Devices ratings. [2 hrs.]
--	--

	Quizzes [1 hr.] <u>Part D- Phase-controlled AC-AC controllers</u> Analysis of AC –Controller: Single phase with R/RL-Load, analysis of three-phase AC controller with R-Load [6 hrs]. Integral –Cycle control, cycloconverter [6 hrs]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering some activities through a simple project to guide the students to self-learning, report writing and scientific debate skills.

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Introduction: Definitions, Power and Energy, Types of Conversion, Power Electronics Approach. The role of switch in power converter, Energy recovery.
Week 2	Power Computations: Mean, RMS, Figures of Merits
Week 3	Methods of Analysis of switching circuits: closed form solution, discrete analysis, Fourier-based analysis

Week 4	Power Diodes: Steady-state characteristics, basic parameters and ratings, transient characteristics, Special Diodes.
Week 5	SCRs: Steady-state characteristics, basic parameters and ratings, controlling SCR by gate pulses.
Week 6	Half-wave diode rectifiers: R-load, RL-Load, freewheeling diode and capacitor filter.
Week 7	Full-Wave diode rectifier R, RL load and freewheeling diode.
Week 8	Controlled Full-Wave rectifier R, RL load and freewheeling diode.
Week 9	Three-phase three-pulse rectifier
Week 10	Six-pulse diode rectifier with R and highly inductive load
Week 11	Analysis of six-pulse rectifier with RLE load
Week 12	The effect of line inductance
Week 13	Diodes and SCR sizing / voltage and current selection
Week 14	AC –Controller: Single phase with R/RL-Load
Week 15	AC –Controller: Three - phase with R-Load

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	1- Measure and analyze transformer circuit model parameters and Identify and comprehend the different connection types of three-phase transformers. 2- Gain a basic understanding of the operation characteristics of DC generators. 3- Control the speed of DC motors and understand the underlying principles. 4- Apply triggering and gate drive approaches to power semiconductor devices and gain an understanding of rectifier, chopper, and inverter circuits. Additionally, explore the fundamentals of electrical machine drive systems. 5- Gain a basic understanding of Programmable Logic Controllers (PLCs) and their applications. 6- Develop foundational knowledge of electronic circuits, including decoders, encoders, and the 555IC.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon successful completion of the Power and Machine Lab I course, students will be able to: 1- Measure and analyze the circuit model parameters of transformers, gaining a comprehensive understanding of their characteristics and performance. Identify and differentiate between various connection types of three-phase transformers, understanding their applications and operational considerations. 2- Apply control methods to regulate the speed of DC motors, considering the underlying principles and techniques involved. 3- Measure, analyze and Identify the operation of dc and ac generator
	4- Utilize triggering and gate drive approaches for power semiconductor devices, while comprehending the basic principles and practical applications of rectifier, chopper, and inverter circuits. Additionally, develop a fundamental understanding of electrical machine drive systems. 5- Demonstrate a basic understanding of Programmable Logic Controllers (PLCs), including their functionality, programming

	concepts, and application in automation and control systems. 6- Acquire foundational knowledge in electronic circuits, specifically decoders, encoders, and the 555IC, comprehending their principles, applications, and integration into electronic systems.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A – power and machine</u> Open and short circuit test for single-phase Transformer. Speed and direction control of D.C. shunt motor using voltage control method Three-phase Power measurement. Speed Control of D.C shunt Motor using field control method. Speed Control of DC Shunt Motor Using Armature Voltage Control Method. No load test of D.C. shunt generator. shunt generator load test. Single phase transformer load test. [32 hrs.] Revision problem and tutorial classes [10hrs.] Quizzes [1 hr.] <u>Part B- Power Electronics</u> Thyristor Controllable Rectification Circuit. Three phase full wave Rectifier. The triac light dimmer control circuit. DC-DC Converters. [12 hrs.] Revision problem and tutorial classes [6hrs.] Quizzes [1 hr.] <u>Part c- Electronics</u> The operation Amplifier. Decoder, Encoder circuit. Integrating and differentiating circuit. Digital counter [12 hrs.] Revision problem and tutorial classes [6hrs.]
	Quizzes [1 hr.]

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. Through hands-on experiments, projects, and laboratory work, students will gain practical skills and knowledge in the areas of power

Strategies	applications, electrical machines, power electronics, and electronic circuits. This course aims to provide students with a comprehensive understanding of measurement techniques, control methods, and practical applications in the field of electrical engineering.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	1. Solving the 2 nd order differential equation and Bessel differential equations by series solutions.
---	---

	- Students learn the principals of the wave equation for one and two dimensions. - To introduce the fundamentals of numerical methods used for the solution of engineering problems and to improve the computer skills of the students.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Partial Differential Equations. One dimensional wave equation Separation of variables, Vibrating string, two-dimensional wave equation, transmission line, Introduction to Complex Variables Complex number system and its operations, Limits and sequences Continuous functions and their properties, Derivatives complex integration and Cauchy integral theorems. Concepts and role for the numerical method in engineering, Numerical Solution of Nonlinear Algebraic Equations, Open Methods, Numerical Solution of linear algebraic equations, Curve Fitting
Indicative Contents المحتويات الإرشادية	

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills.

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

	Material Covered
Week 1	Partial Differential Equations. One dimensional wave equation Laplace equation Derivatives
Week 2	Separation of variables
Week 3	vibrating string, two-dimensional wave equation, transmission line

Week 4	Introduction to Complex Variables
Week 5	Complex number system and its operations
Week 6	Limits and sequences Continuous functions and their properties
Week 7	complex integration and Cauchy integral theorems
Week 8	Mid-term Exam
Week 9	Concepts and role for the numerical method in engineering, approximations, and errors, the definition of Round-off error and truncation error, absolute and relative true/approximation error.
Week 10	Numerical Solution of Nonlinear Algebraic Equations (Roots of Equations): Bracketing Methods (Bisection, and False-Position method)
Week 11	Open Methods (Newton-Raphson and secant method).
Week 12	Numerical Solution of linear algebraic equations (system): the difference between the direct and indirect methods, Singular and ill/well-conditioned system, Partial and complete Pivoting, Convergence Criteria, Jacobi iterative method.
Week 13	The Gauss-Seidel iterative method, Gauss-Seidel iterative with the relaxation factor method. Tri-diagonal systems and its solution.
Week 14	Curve Fitting: Classification of Curve Fitting (Regression and Interpolation), the concepts of regression, and Least Square Criterion, Linear Regression.
Week 15	Introduction to another methods (finite difference, finite volume, finite element method)
Week 16	Preparatory week before the final Exam

Grading Scheme

مخطط الدرجات

Group	Grade	التقدير	Marks (%)	Definition
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance
	B - Very Good	جيد جدا	80 - 89	Above average with some errors
	C - Good	جيد	70 - 79	Sound work with notable errors
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria
Fail Group (0 - 49)	FX - Fail	راسب (قيد المعالجة)	(45-49)	More work required but credit awarded
	F - Fail	راسب	(0-44)	Considerable amount of work required

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	- Power Generation Technologies: The module aims to introduce students to different power generation technologies, such as thermal power plants, hydroelectric power plants, nuclear power plants, renewable energy sources (solar, wind, biomass, etc.), and their characteristics. It covers the principles of operation, components, efficiency, and environmental impacts of these power generation technologies. - Power Distribution Systems: The module aims to familiarize students with the distribution of electrical power from the transmission grid to end-users. It covers distribution network design, components, and operation, including substations, distribution transformers, switchgear, and protection systems. Students learn about the challenges associated with distribution system operation, such as voltage regulation, power quality, and reliability.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon completion of the course, the student will be able to: - Knowledge of Power Generation Technologies: Students will acquire a comprehensive understanding of various power generation technologies, including thermal, hydroelectric, nuclear, and renewable energy sources. They will grasp the principles of operation, components, efficiency, and environmental impacts associated with each technology. - Familiarity with Power Distribution Systems: Students will gain a solid understanding of power distribution systems, including network design, components, and operation. They will become knowledgeable about substations, distribution transformers, switchgear, and protection systems. They will understand the challenges associated with voltage regulation, power quality, and system reliability in distribution networks. - Students will be able to apply engineering principles and concepts to solve practical problems related to power generation and distribution systems. They will develop problem-solving skills and apply their knowledge to design efficient and reliable power systems, address system vulnerabilities, and

	optimize system performance.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Generation Systems:</u> Introduction and Definitions of Primary and secondary energy, commercial and noncommercial Energy, renewable and non-renewable energy, Definitions: Load factor, utilization factor, capacity factor, diversity factor, demand factor, availability. Energy Generation in Power Plants: Hydro power plants, Thermal Power Plants, Steam Power Plant, Gas Power Plant, Combined Cycle Gas Power Plant, Nuclear Power Plant, Diesel Power Plants. Renewable Energy Systems: Solar energy system, Solar Thermal Power Plants, Wind energy systems, Geothermal systems, Biomass systems, Fuel Cell. [24 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [2 hr.] <u>Distribution Systems:</u> Introduction, Classification of Distribution System, Methods of Connection, Comparison among Distribution Systems, Type of D.C Distributions: D.C Distributor fed at One End-Concentrated Loading, D.C Distributor fed at Both End- Concentrated Loading, D.C Distributor fed at One End with Uniformly Distributed Load, D.C Distributor fed at Both Ends with Uniformly Distributor Load, D.C Ring Distributor, Ring Distributor with Inter-Connector, Stepped Distributor, Classification of A. C. Distribution Systems. Methods of Connection, Single Phase Distribution Systems, Three Phase Distribution Systems. Types of A. C. Distribution Systems. A. C. Radial Systems: A. C. Distributor fed at one end. A. C. Distributor fed at both ends. A. C. Ring Systems Protection of Distribution Systems, Distribution Transformers, Types of Sub-Stations, Sub-Stations Measurements Devices. [24 hrs.] Revision problem and tutorial classes [6 hrs.] Quizzes [3 hr.]

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتقات الإرشادية

Module Aims أهداف المادة الدراسية	13- To introduce students to the fundamental concepts, theories, and principles of electrical machine drives. 14- To introduce students to the types of mechanical loads and understand steady state stability points in different operation quadrants. 15- To develop students' understanding of the different types of electrical machines and their operating characteristics. 16- To equip students with knowledge of power electronic converters used in electrical machine drives. 17- To familiarize students with control strategies for efficient and reliable operation of electrical machine drives. 18- To enable students to analyze and evaluate the performance of electrical machine drive systems. 19- To encourage critical thinking and problem-solving skills through real-world case studies in the field of speed control, starting and braking of the electrical machines such as DC, induction and synchronous motors. 20- To promote awareness of emerging trends and technologies in the field of electrical machine drives, such as the field of electrical vehicles.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon successful completion of this module, students will be able to: 1- Demonstrate a clear understanding of the fundamental concepts, theories, and principles underlying electrical machine drives. 2- Identify and classify different types of mechanical loads and comprehend the steady-state stability points associated with various operation quadrants. 3- Differentiate between different types of electrical machines, including DC, induction, and synchronous motors, and evaluate their operating characteristics.
	4- Explain the functioning and operation of power electronic converters used in electrical machine drives. 5- Apply control strategies to ensure efficient and reliable operation of electrical machine drives. 6- Analyze and evaluate the performance of electrical machine drive systems. 7- Utilize critical thinking and problem-solving skills through real-world case studies focused on speed control, starting, and braking of electrical machines, such as DC, induction, and synchronous motors. 8- Demonstrate awareness of emerging trends and technologies in the field of

	electrical machine drives, particularly in areas like electric vehicles, and discuss their potential impact and applications.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following.
	• Introduction to Electrical Machine Drives • Overview of electrical machine drives and their importance in various industries • Introduction to fundamental concepts, theories, and principles of electrical machine drives • Introduction to mechanical loads and steady-state stability points in different operation quadrants
	• Types of Electrical Machines • Classification and characteristics of electrical machines, including DC, induction, and synchronous motors • Operating principles, construction, and key features of each type of electrical machine • Analysis of the operating characteristics, performance parameters, and limitations of electrical machines
	• Power Electronic Converters • Introduction to power electronic converters and their role in electrical machine drives • Detailed study of converter topologies and their applications in different types of electrical machines • Understanding the functioning and control of power electronic converters in electrical machine drive systems
	• Control Strategies for Electrical Machine Drives • Overview of control strategies for efficient and reliable operation of electrical machine drives • Study of speed control techniques, starting methods, and braking mechanisms for DC, induction, and synchronous motors • Application of control strategies to optimize the performance of electrical machine drives
	• Performance Analysis of Electrical Machine Drives • Analysis and evaluation of the performance parameters of electrical machine drive systems
	• Examination of efficiency, power factor, and torque production, of electrical machine drives • Techniques for assessing and improving the overall performance and reliability of electrical machine drive systems
	• Emerging Trends and Technologies • Exploration of emerging trends and technologies in the field of electrical machine drives • Investigation of advancements in electric vehicles and their impact on electrical machine drives • Discussion of cutting-edge research, innovations, and future directions

in electrical machine drives

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies

Lectures: Conduct regular lectures to deliver theoretical concepts and foundational knowledge. Use multimedia presentations, diagrams, and examples to enhance understanding. Encourage student participation through discussions and questions.

Practical Laboratory Sessions in cooperation with the Course of the Power and Machine Lab to provide students with practical experience in operating Electrical machines drives .

Case Studies and Problem-Solving Exercises: Assign case studies and problem-solving exercises that simulate real-world scenarios related to Electrical machines drives . Encourage students to apply their theoretical knowledge to analyze and solve these problems, fostering critical thinking and problem-solving skills.

Group Discussions and Peer Learning: Organize group discussions and collaborative learning activities where students can discuss and share their understanding of AC machines. Encourage peer-to-peer teaching and learning, promoting active engagement and the exchange of ideas.

Simulations and Virtual Labs: Utilize computer-based simulations and virtual labs to supplement practical learning. These tools can provide interactive experiences and allow students to experiment with different AC machine configurations and operating conditions.

Guest Lectures and Industry Visits: Invite industry experts or guest lecturers to share their practical experiences and insights related to Electrical machines drives . Arrange visits to relevant industrial facilities to provide students with exposure to real-world applications and challenges.

Online Resources and Learning Management Systems: Provide access to online resources, including lecture notes, reference materials, and interactive tutorials. Utilize a learning management system to facilitate communication, assignment submissions, and online discussions.

Assessments: Design a variety of assessments, including quizzes, assignments, and examinations, to evaluate students' understanding of the course material. Incorporate practical assessments, such as simulation-based projects, to assess hands-on skills.

	Feedback and Progress Monitoring: Provide timely and constructive feedback to students on their assignments and assessments. Monitor students' progress throughout the course and offer additional support or clarification when needed. Industry-Engaged Projects: Assign project work that requires students to apply their knowledge of AC machines to real-world problems or industry-related challenges. This could involve designing a motor control system, optimizing power flows, or analyzing the performance of a synchronous generator. By employing a combination of these learning and teaching strategies, students can develop a solid theoretical understanding of Electrical machines drives while also gaining practical skills and the ability to apply their knowledge in real-world scenarios.

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

Material Covered

Week 1	Overview for electrical drives, concept, classification, parts and advantages of electrical drives, applications of electrical drives in electrical vehicles
Week 2	Dynamic of the motor load system, components of load torques, electrical braking, steady state stability, ratings of converters and motors, speed control and multi quadrant operation, drive specifications
Week 3	Characteristics of dc motors, types of dc motors, steady-state speed torque relations, methods of speed control, starting, braking, multi quadrant operation of separately excited dc motor
Week 4	Power electronics drives classification, overview of semiconductor switching devices, single-phase dc drive(half-wave converter, semi converter, full-converter, dual converter)
Week 5	Three-phase dc drives (half-wave converter, semi converter, full-converter)
Week 6	Chopper drives (principle of power control, principle of regenerative control, principle of rheostatic brake control,
Week 7	Chopper drives, two and four quadrant drives, and General review of dc drives and evaluation the dc part
Week 8	AC drives (classifications, induction motor drives, speed control methods, stator voltage control
Week 9	Induction motor drives speed control using frequency control, V/f control,
Week 10	Speed control and starting methods of synchronous motors
Week 11	Course projects about Synchronous Motor Drives (speed control and introductions to types of SM, cylindrical rotor, salient-pole, reluctance, permanent-magnet , switched reluctance , brushless dc and ac motors), stepper motor drives, and scalar and vector control of IM
Week 12	Modern drives of EV (Reports)
Week 13	Projects discussion
Week 14	Projects discussion
Week 15	AC drive review.

Module Aims, Learning Outcomes and Indicative Contents
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	This course is designed as the second part of Power Electronics I (EEPM305) course. In EEPM305 the students introduced to power switching devices and phase-controlled converters. This course focuses on PWM control applied to dc-dc and dc-ac converters with emphasis on design part. 1- DC-DC and DC-AC power conversion. The operating principles, design, characteristics and application of these electronic power converter circuits are treated, with the goal of equipping the students with capability to analyze and design such power supplies. 2- Various important topologies of power converter circuits for specific types of applications are covered and analyzed. These include DC-DC converters and inverters. 3- The course also analyze the qualities of waveforms at input and output ends of these converters. The quality of these waveforms is of major concern to users of modern power converter circuits. 4- The course covers some aspects of the design and application.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	By the completion of the course, the students should be able to: 1. Perform analysis of single- and multi-quadrant DC-DC chopper, and identify the fundamental control methods (current mode/voltage mode). 2. Analyze non-isolated DC-supply circuits: Buck, Boost, Buck-Boost and Cuk converters. 3. Perform a basic design (topology and components selection) of dc-supply circuit for a given application. 4. Describe the role of the transformer isolation and analyze the basic transformer-isolated dc-dc converters. 5. Present single-phase VSI half and full-bridges implementations. 6. Analyze the single-phase inverter operation in square-wave, quasi-square wave and PWM modes. 7. Define three-phase VSI, switching variables and operations as six step inverter. 8. Present carrier comparison control of three phase inverter.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following.
	<u>Chapter 1: DC Choppers: (3 weeks)</u> First quadrant, second quadrant, first and second quadrants, first and fourth quadrants and

	four quadrants choppers. Bridge Circuit switching function <u>Chapter 2: non-isolated D.C power supply circuits: (4 weeks)</u> Buck, boost, buck-boost, and Cuk regulators. <u>Chapter 3: Transformer-Isolated DC supplies (2 weeks):</u> Feedforward and flyback. <u>Chapter 4: Single-phase and three-phase inverters. (6weeks)</u> Square wave mode (half and full bridge circuits), quasi square wave operation and PWM of single-phase inverter Three phase inverter and its switching variables Pulse width modulation (PWM) strategies of three-phase inverter.
--	--

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering some activities through a simple project to guide the students to self-learning, software use, report writing and scientific debate skills.

المناهج الاسبوعي النظري

	Material Covered
Week 1	Introduction: PWM control explanation through an idealized converter.
Week 2	One and two dc quadrant choppers: topology and analysis.
Week 3	Four-quadrant chopper: analysis; voltage and current control.
Week 4	Non-isolated DC Power supply circuits Buck Converter, Boost Converter
Week 5	Buck-Boost, Cuk converter
Week 6	DC power supply circuits: discontinuous mode analysis
Week 7	DC power supply circuits comparison and design aspects
Week 8	Transformer Isolated DC supply circuit. The operation and analysis of transformer in power converters
Week 9	Fly-back Converter Forward Converter
Week 10	(Mid-term exam) Chapter 6: AC Inverters Single –Phase half-bridge inverter Square wave mode
Week 11	Single –Phase full-bridge Inverter Square wave mode Single –Phase Quasi square wave mode
Week 12	Single-Phase Inverter: PWM control
	Implementation and analysis using Fourier series analysis
Week 13	Three –Phase VSI: Square Wave Mode (six-step inverter)
Week 14	Session 1: Three –Phase VSI: Sinusoidal PWM

	Session 2:
	Three-Phase VSI: Carrier Comparison methods
Week 15	Analysis and design of three-phase inverter.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	An introductory course on programmable logic controllers (PLCs) and their basic applications. Topics include an overview of PLCs, PLC hardware components, basics of PLC programming, development of fundamental PLC ladder programming, timers and counters, data manipulation, concepts in analog data I/O advanced programming techniques, PLC sensors and actuators, and PLC communication Networks. Classroom instruction is supported by laboratory activities through which students use PLCs to perform
	industrial control functions, troubleshooting, and networking PLCs in situations of typical industrial projects
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	By the end of successful completion of this course, the student will be able to: 1. Apply modern PLC programming tools to develop functional ladder diagrams 2. Design a ladder program to control sequential processes. 3. Design a ladder program for timer and counter based systems 4. Assess communication links between computers, PLCs and various I/O devices
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Competency 1: The student will demonstrate an understanding of the building blocks of basic Boolean algebra by: 1. Applying basic number conversation to and from different numbers systems, such as: binary, decimal, hexadecimal, anecdotal 2. Describing and implementing basic logical operators such as: and, or and not 3. Simplifying Boolean functions using K-Maps 4. Converting Boolean functions into digital circuits and generating the corresponding truth tables 5. Describing and implementing the one's and two's complement binary notation Competency 2: The student will demonstrate an understanding of basic programmable logic controller (PLC) technology and the industrial control devices used currently in automation by:

	1. Defining and describing a PLC 2. Describing the functions of all the devices in a PLC system 3. Describing the differences and similarities among relay ladder logic and PLC ladder logic 4. Describing the differences between personal computers and PLCs 5. Designing and implementing basic ladder logic programs 6. Describing the electrical safety issues related to working with PLCs Competency 3: The student will demonstrate an understanding of the basic operation of electro-mechanical input devices by:
	1. Identifying and describing various manually operated switches typically used in PLCs such as: toggle, push button, selector, and push wheel 2. Identifying and describing the following output devices: solenoids, relays, contactors, and alarms 3. Interfacing basic input/output devices to a PLC system 4. Troubleshooting basic input/output devices in a PLC system Competency 4: The student will demonstrate an understanding of the operation of basic electronic and mechanical timers by: 1. Describing the main differences among mechanical and electronic timing relays 2. Identifying and describing the operation of a mechanical timing relay 3. Identifying and describing the operation of timer -on delay (TON) and timer -of delay (TOF) timer instructions 4. Troubleshooting input/output modules with timer instructions Competency 5: The student will demonstrate an understanding of the operation of basic electronic and mechanical counters by: 1. Describing the main differences between mechanical and electronic counters 2. Identifying and describing the operation of a mechanical counter 3. Designing and analyzing ladder diagrams for the up/down counter typically implemented

	in industrial automation 4. Designing and implementing, using a PLC system, the done bit, enable bit and overflow/underflow bit counters 5. Troubleshooting counters in a ladder logic design Competency 6: The student will demonstrate an understanding of the operation and function of electromechanical sequencing devices by: 1. Identifying and describing the operation and function of electro-mechanical sequencing devices 2. Describing the basic PLC sequencer function
--	---

	3. Designing and implementing the ladder logic diagram for the operation of a PLC sequencer with timing 4. Designing, describing and implementing the technique of cascading sequencers 5. Troubleshooting ladder logic rungs using sequencer instructions Competency 7: The student will demonstrate an understanding of the operation and function of analog sensors by: 1. Describing the operation and function of analog devices such as temperature, pressure, flow and position sensors 2. Enumerating and describing the components of an infrared system and their operations 3. Explaining the general closed-loop block diagram and stating the purpose of each of the blocks 4. Describing and explaining the general characteristics that differ between effective and ineffective control systems 5. Troubleshooting basic input/output analog devices
--	--

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	-Active Learning: Through class discussions and real world problems. - Coordination with lab classes to provide a parallel hands-on experience. -Use google classroom platform to enhance learning and provide supplementary material.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	7- Understand parallel operation and zig-zag connection of transformer. 8- Understand how the speed of dc motors can be controlled. 9- Understand the load test of dc motors. 10- Understand how to find Induction motor parameters. 11- Understand the triggering approaches of MOSFET transistor and learning the basic of the chopper and inverter circuits. 12- Apply the principles of electrical drives to real-world applications in industrial and commercial settings 13- Understand the basic of: Integrating and differentiating circuit., Shift Registers. Op- Amp and PLC.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon completion of Lab 2, students will be able to: 1- Demonstrate a comprehensive understanding of the parallel operation and zig-zag connection of transformers, including their benefits, challenges, and practical applications. 2- Apply load test to the DC machines. 3- Conduct load tests on DC machine, analyze the performance characteristics, and interpret the results. 4- Determine the parameters of induction motors through practical experiments, including measurements and calculations, allowing for a thorough understanding of their operating characteristics. 5- Utilize triggering approaches for MOSFET transistors, applying the principles to design and analyze basic chopper and inverter circuits. Understand the advantages, limitations, and applications of these circuits. 6- Apply the principles of electrical drives to real-world applications in industrial and commercial settings, considering factors such as motor selection, control strategies, and energy efficiency. 7- Gain a basic understanding of integrating and differentiating circuits, shift registers, operational amplifiers (Op-Amp), and Programmable Logic Controllers (PLCs), including their principles, functionalities, and applications in electronic systems.

Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A – power and machine</u> Determination of regulation of an alternator by Synchronous Impedance Method Three-phase induction motor (No-load & Locked rotor test) parallel Operation of Two Single-phase Transformers. Load test of D.C. series generator Three-phase induction motor. (Directional control and star -delta starting) Three-phase Synchronous generator (Load test) [32 hrs.] Revision problem and tutorial classes [10hrs.] Quizzes [1 hr.] <u>Part B- Power Electronics</u> PWM signal generation to control a D.C. chopper using Arduino Motor drive [12 hrs.] Revision problem and tutorial classes . full Bridge Inverter Automatic Control of Motor Drive ACH555 [12hrs.]
--	---

	Revision problem and tutorial classes [6hrs.] Quizzes [1 hr.] <u>Part c- Electronics</u> Design of a timer using the IC-555 Shift Registers . The concept of Analog to digital converter (ADC) using Arduino Introduction to PLC and Ladder Logic Programming [12 hrs.] Revision problem and tutorial classes [6hrs.] Quizzes [1 hr.]
--	---

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. Through hands-on experiments, projects, and laboratory work, students will gain practical skills and knowledge in the areas of power applications, electrical machines, power electronics, and electronic circuits. This course aims to provide students with a comprehensive understanding of measurement techniques, control methods, and practical applications in the field of electrical engineering.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	The student should be able to: 1. Select a realistic engineering project idea that serves their field of specialization. 2. Formulate the project problem, objectives, and outcomes in a scientific manner. 3. Prepare a preliminary design or an initial simulation model to verify the feasibility of the idea. 4. Learn how to use certain laboratory equipment and how to handle or operate it properly. 5. Prepare a work plan (timeline and implementation plan) that leads to the completion of the engineering project. 6. Write a project proposal and deliver a preliminary presentation.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	After completing the course, the student will be able to: 1. Formulate a well-structured proposal for the graduation project. 2. Select appropriate simulation/design tools according to the specialization. 3. Create a system block diagram, circuit diagram, or flowchart. 4. Interpret preliminary simulation results and identify the required improvements. 5. Prepare a timeline and organize the tasks of the project team. 6. Write a concise engineering report and deliver a clear presentation.
Indicative Contents المحتويات الإرشادية	First: Theoretical Component 1. The concept of the graduation project, its specifications, and success criteria. 2. Selecting a project idea and linking it to the needs of society and/or industry. 3. Formulating the Problem Statement, Objectives, and Scope. 4. Collecting scientific sources and managing references (IEEE style). 5. Fundamentals of the Engineering Design Process. 6. Requirements and constraints analysis (cost, time, availability of components, safety). 7. Comparing solutions and selecting the optimal alternative (Decision Matrix). 8. Introduction to modeling and simulation for electrical engineering projects. 9. Preparing an implementation plan (WBS + Gantt chart) through a Work Breakdown Structure by dividing the project into smaller parts (main tasks and sub-tasks) to make execution clear and manageable. 10. Writing the project proposal and a concise technical report. 11. Principles of testing and verification (Test Plan). 12. Overview of research ethics (citation, originality, plagiarism).
	13. Introduction to fundamental international standards in electrical engineering (IEC,

	IEEE, ISO, NFPA, ANSI, BS) and their impact on safety and design/execution quality.
	Second: Practical Component 1. Selecting a practical applied or computer-based project for each group (2-4 students). 2. Preparing a concise proposal. 3. Conducting a preliminary literature review (12-15 references). 4. Developing an initial simulation model (according to the specialization). 5. Identifying the tools and components required for the project. 6. Preparing a timeline with milestones, delivering a progress presentation, and a preliminary final presentation for the graduation project.

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1. Interactive lectures 2. Group mentoring and guidance sessions 3. Simulation, design, and hands-on laboratory sessions 4. Project-Based Learning (PBL) 5. Short weekly discussions and presentations

المناهج الاسبوعي النظري

	Material Covered
Week 1	Introduction to the Engineering Project: concept of a project, types of engineering projects, project life cycle, and the role of the electrical engineer.
Week 2	Defining the project idea and formulating the engineering problem (Problem Definition) and analyzing technical requirements.
Week 3	Engineering solution generation (Concept Generation) and comparison of alternatives using engineering and economic criteria.
Week 4	Engineering Design Process and its application to electrical engineering projects.
Week 5	Preparing the Project Proposal: objectives, scope, deliverables, and constraints.
Week 6	Project planning: Work Breakdown Structure (WBS) and defining activities and tasks.
Week 7	Project scheduling: Gantt charts, networks (PERT/CPM), and time estimation.
Week 8	Resource and cost management: cost estimation, budgeting, and human/technical resources.
Week 9	Risk management in engineering projects: risk identification, analysis, and mitigation strategies.
Week 10	Technical considerations in electrical projects: standards (IEC, IEEE), safety, reliability, and sustainability.
Week 11	Quality management and engineering documentation: technical reports, drawings, and specifications.
Week 12	Teamwork and engineering communication: team management, presentations, and engineering ethics.
Week 13	Project implementation and monitoring: progress tracking, change control, and performance evaluation.
Week 14	Project presentations and final evaluation: discussion of results, lessons learned, and future improvements.
Week 15	Introduction to the Engineering Project: concept of a project, types of engineering projects, project life cycle, and the role of the electrical engineer.
Week 16	Preparatory week before the final Exam

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims	The aims of the module are to
المادة الدراسية	1. Foster the development of problem-solving skills, with a particular emphasis on speaking, reading, writing, and listening, while also gaining a comprehensive understanding of the English language as a foreign language through the utilization of various techniques. 2. Comprehend the fundamental principles of the English language. 3. Explore the foundational concepts essential for learning the key principles of English grammar and expanding English vocabulary. 4. Establish a solid foundation for proficient English writing and speaking. 5. Gain a comprehensive understanding of constructing grammatically accurate English sentences.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon completing the course, students will be able to: 1. Demonstrate proficiency in utilizing main and auxiliary verbs, as well as possessive pronouns. 2. Compile a comprehensive list of words associated with questions and various subject pronouns. 3. Engage in conversations concerning social expressions and personal information, particularly regarding jobs, using affirmative, negative, and interrogative sentences. 4. Discuss the usage of adjectives and their placement within sentences. 5. Construct simple present sentences using "I," "we," "you," and "they," and accurately define the usage of articles. 6. Describe the present simple tense utilizing "he" and "she," and explore adverbs of frequency. 7. Identify basic question words and demonstrative pronouns, and effectively apply them in different contexts. 8. Examine the usage of "there is/are" and various prepositions. 9. Analyze the structure of simple past sentences and irregular verbs. 10. Explain the negative and interrogative structures of simple past tense sentences, along with adverbs associated with the past tense. 11. Recognize the usage of multiple adverbs and the use of "can/can't" in sentences, while explaining requests and offers. 12. Elaborate on the usage of "like" and "would you like," as well as the application of "some" and "any" in various expressions. 13. Discuss the application of the present continuous tense and distinguish it from the present simple tense.

	14. Explain the structures employed to refer to future plans.
Indicative Contents المحتويات الإرشادية	The indicative content of the course comprises the following: 1. Introduction to the significance of English language acquisition and its role in social communication.
	2. Application and practice of various tenses, such as present and past tenses. 3. Comprehensive exploration of key concepts, including offers, requests, future, personal expressions, and different tenses. 4. Utilization of a range of skills to facilitate English language learning, including listening, reading, writing, and speaking. Additionally, providing diverse examples to enhance understanding of concepts and structures.

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategies adopted in delivering this module include: • Encouraging active participation and fostering critical thinking skills through engaging students in discussions. • Applying the communicative approach to enhance students' English language learning skills and enable effective communication. • Incorporating authentic materials in the classroom to create a realistic and immersive learning experience. • Emphasizing student motivation and promoting their engagement in the learning process. • Enhancing interaction and communication skills to achieve greater success in English language proficiency.

المنهاج الأسبوعي النظري

	Material Covered
Week 1	Develops further knowledge of the grammar and of essential vocabulary in order to lead the students to an advanced level of proficiency.
Week 2	Emphasis is placed on developing listening
Week 3	Emphasis is placed on developing speaking,
Week 4	Emphasis is placed on developing reading
Week 5	Emphasis is placed on developing writing

Week 6	grammar and fundamental writing skills
Week 7	Midterm Exam
Week 8	Understand the main ideas of a variety of written and spoken texts

Week 9	Participate effectively in a short conversation using appropriate language.
Week 10	Select appropriate vocabulary to talk about feelings and experiences.
Week 11	Select appropriate vocabulary to talk about opinions and experiences.
Week 12	Recognize, understand and use a number of phrasal verbs and collocations.
Week 13	Effective organizational strategies that include introductions, and paragraphs.
Week 14	Effective organizational strategies that include transitions, and conclusion.
Week 15	Revision
Week 16	Preparatory week before the final Exam

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	The aim of this course is to provide students with a solid understanding of the analysis, modeling, and design of control systems. The course develops the ability to analyze system behavior, assess stability and performance, and design appropriate controllers for engineering applications. 1. Develop a strong foundation in mathematical modeling of dynamic systems using differential equations, transfer functions, and state-space representations. 2. Enable students to analyze the time-domain and frequency-domain behavior of control systems, including transient and steady-state performance. 3. Provide systematic methods for assessing stability using classical and modern techniques.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1-Model dynamic systems using differential equations, transfer functions, and state-space representations. 2- Analyze system behavior in the time and frequency domains. 3- Evaluate system stability using classical and modern stability criteria.
Indicative Contents المحتويات الإرشادية	W1-W3 Introduction and concept of control systems • Definition and classification of control systems • Basic components of a control system • Open-loop vs. closed-loop control systems • Advantages and disadvantages of feedback • Review of Laplace transform fundamentals • Basic matrix operations • Concept and definition of transfer functions W4-W5 Modelling of Control Systems and Transfer function • Block diagram representation of systems • Feedback loop representation • Concept of signal-flow graphs • Conversion between block diagrams and SFGs W6-W9 Representation of control systems as matrix form • Concept of state variables • State-space representation • State equations in vector–matrix form • Compact representation of multi-variable systems • Input, state, and output matrices • Examples of MIMO systems

	W10-W13 Analysis of control systems • Characteristic equation of state-space systems • Concept and importance of controllability • Controllability tests • Concept and importance of observability • Observability tests W14-W15 Time-Domain Analysis of Control Systems • Time response specifications • Analysis of first-order systems • Stability considerations • Time-domain performance indices • Steady-state error analysis • Error constants • Transient response of second-order systems • Damping ratio, natural frequency, overshoot, settling time
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1. Lectures • Structured lectures introduce fundamental concepts, theories, and analytical techniques in control systems. • Emphasis is placed on conceptual understanding, mathematical formulation, and physical interpretation. 2. Problem-Solving Sessions • Guided tutorials focus on solving numerical and analytical problems. • Students practice stability analysis, controller design, and performance evaluation. • Active student participation is encouraged through in-class discussions. 3. Project-Based Learning • Individual or group mini-projects involve modeling, analysis, and controller design for selected systems. 4. Self-Directed Learning • Students are encouraged to engage in independent study through textbooks, research papers, and online resources. • Homework assignments and reading tasks support deeper

	understanding. 5. Continuous Feedback - Regular formative feedback is provided through assignments, quizzes, and reports. - Feedback helps students identify strengths and areas for improvement.

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	The objective of Power system analysis is for designing entire power systems consisting of generators, transformers, capacitor banks, shunt elements, transmission lines and so on. Power system analysis makes sure the equipment works together so that the required power is delivered to the load centers at the prescribed voltage and frequency, and no component in the network is overloaded and no-fault condition jeopardizes the system.

Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Acquiring knowledge of modern techniques that support the development of electrical power stations. 2. Understanding the basic concepts of troubleshooting in electrical power stations and transmission lines. 3. Understanding the fundamentals of electrical power transmission and distribution. 4. Understanding the basics of dealing with electrical power systems. 5. Building the scientific foundation for students in the field of designing and constructing power systems and transmission lines. 6. Training students on modern techniques in electrical fault diagnosis and repair. 7. Studying the fundamental concepts of building high-quality power systems. 8. Equipping students with scientific and practical skills to diagnose and repair faults in electrical power systems.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A -</u> Introduction; Syllabus; basic components of a power system, single line diagram, per unit analysis, generator, transformer, transmission line and load representation for different power system, Construction of Y-bus and Z-bus, Power-flow problem and equations [12 hrs.] Revision problem and tutorial classes [3 hrs.] Quizzes [1 hr.] <u>Part B-</u> Gauss-Seidel method for solving power-flow equations, Newton-Raphson method for solving power-flow equations, balanced three-phase fault, short-circuit capacity, Bus impedance matrix, Fault analysis using bus impedance matrix, Symmetrical components and unbalanced faults (Review), Economical Operation of Power System neglecting generator limits and line losses [15 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [1 hr.] <u>Part C-</u> Economical Operation of Power System with generator limits and line losses. Introduction, Classification of Power System Stability. Dynamic Equation of Synchronous Machine, Stability Analysis Swing equation, Multi machine system, Machines swinging in unison or coherently Power flow under steady state, Steady-state Stability, Transient Stability-Equal area criterion Transient Stability Applications of sudden change in power input, Critical clearing angle and critical clearing time, Application of equal area criterion 1- Sudden loss of one parallel line 2-sudden short circuit on one of parallel lines a) Short circuit at one end of line b) Short circuit at the middle of a line. [15 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [1 hr.]
Learning and Teaching Strategies	

استراتيجيات التعلم والتعليم	
Strategies	1- Electronic illustration tools, such as presentations, slides, images, videos, and others, can be used to clarify concepts and scientific information to students. These tools can be used to illustrate examples and practical applications, present graphs and charts to clarify relationships and processes, and demonstrate results and statistical data. 2- Surprise daily tests can be conducted without prior notice to students to motivate them to regularly review the materials and prepare well for any test. These daily tests can be sudden and short-term, aiming to test students' immediate understanding of the study materials and concepts. As for weekly tests, they can be announced in advance to students, giving them sufficient time to prepare. The purpose of weekly tests is to assess the overall progress of students and their understanding of the study materials over a longer period. 3- Students can be given the opportunity to participate in open discussion sessions on the study topics. These sessions can be organized to allow students to discuss scientific materials, exchange ideas and opinions, ask questions, and clarify any doubts. These discussion sessions can be organized as part of the lessons or as independent activities. Additionally, students can be assigned research tasks to explore the latest applications of the scientific subject matter.

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية			
Module Aims أهداف المادة الدراسية	The aim of this course is to: - The development and applications of switchgear and protective relaying systems. - The construction, operation, and characteristics of H.R.C. fuses.		

	• Circuit breakers as protective and isolating equipment. • The philosophy and requirements of protective devices in power systems. • The role and operation of current transformers and voltage transformers. • Overcurrent and earth-fault protection principles and requirements. • Directional protection for looped circuits. • High-impedance and low-impedance differential protection principles. • Power transformer protection schemes. • Bus-bar differential protection principles and applications..
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon successful completion of this module, students will be able to: 1. Explain the fundamental principles, evolution, and applications of switchgear and protective relaying systems in modern power networks. 2. Describe and analyze the construction, operation, and performance characteristics of protective devices such as H.R.C. fuses and circuit breakers. 3. Evaluate the philosophy of power system protection, including selectivity, sensitivity, reliability, speed, and stability. 4. Apply the principles of current transformers (CTs) and voltage transformers (VTs) for measurement and protection purposes, including ratio selection and error analysis. 5. Design and assess overcurrent and earth-fault protection schemes based on system requirements and fault conditions. 6. Analyze directional protection techniques for looped and interconnected power systems. 7. Compare and justify the use of high-impedance and low-impedance differential protection schemes for various power system components. 8. Develop appropriate protection schemes for power transformers, considering different types of internal and external faults. 9. Design and evaluate bus-bar protection schemes using differential relaying techniques. 10. Integrate multiple protection strategies to ensure coordinated and reliable protection of electrical power systems. CLO Reference CLO1: Explain the fundamentals, classification, and development of switchgear and protective relaying systems in modern power systems. CLO2: Describe the construction, operation, and performance characteristics of H.R.C. fuses and evaluate their applications in fault protection.

	CLO3: Analyze the operating principles, types, and arc extinction methods of circuit breakers as protective and isolating devices. CLO4: Evaluate the philosophy of power system protection, including selectivity, sensitivity, reliability, speed, and stability. CLO5: Apply the principles of current transformers (CTs) and voltage transformers (VTs), including ratio selection, errors, and their role in protection schemes. CLO6: Design and assess overcurrent and earth-fault protection schemes, including relay characteristics and coordination requirements. CLO7: Analyze directional protection schemes for looped and interconnected power systems. CLO8: Compare and apply high-impedance and low-impedance differential protection schemes for various power system components. CLO9: Develop appropriate protection schemes for power transformers, including differential and restricted earth fault (REF) protection. CLO10: Design and evaluate bus-bar differential protection schemes for reliable and fast fault clearance.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part A – Switchgear and Fundamental Protection Concepts Overview of switchgear and protective relaying systems, including their development and role in modern power systems. H.R.C. fuses: construction, operation, and characteristics. Circuit breakers: types, operating mechanisms, and their use as protective and isolating equipment. Protection philosophy: selectivity, sensitivity, reliability, speed, and stability. [10 hrs.] Revision problems and tutorial classes [2 hrs.] Quizzes [1 hr.]

	Part B – Instrument Transformers and Overcurrent Protection Current transformers (CTs) and voltage transformers (VTs): construction, principles, errors, and applications in protection. Overcurrent and earth-fault protection: principles, relay characteristics, grading, and coordination. Directional protection for looped and interconnected systems. [11 hrs.] Revision problems and tutorial classes [2 hrs.] Quizzes [1 hr.] Part C – Differential Protection and Power System Equipment Protection Differential protection principles: high-impedance and low-impedance schemes, stability considerations, and applications. Power transformer protection: differential protection, restricted earth fault (REF), Buchholz relay, and overfluxing protection. Bus-bar protection: differential protection schemes, zone selection, and high-speed fault clearance. Integration and coordination of protection systems in modern power networks. [6 hrs.] Revision problems and tutorial classes [1 hr.] Quizzes [1 hr.]
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through 1. Formal face-to-face lectures, which provide you with a focus on the core analytical material in the course, together with qualitative, alternative explanations to aid your understanding. 2. Tutorials, which allow for exercises in problem solving and allow time for you to resolve problems in understanding of lecture material.

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	The module's aims can be inferred from the course description and objectives:

	1- To introduce students to the fundamentals of high voltage engineering and its applications. 2- To develop an understanding of electrical insulation behavior and design under high voltage stress. 3- To study breakdown mechanisms in gases, liquids, and solid materials. 4- To provide knowledge of high voltage generation techniques (AC, DC, and impulse). 5- To emphasize safety, testing methods, and protection systems in high voltage environments. 6- To prepare students for practical and industrial applications in power systems and related fields.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	By the end of the course, students will be able to: 1. Understand High Voltage Fundamentals a. Explain principles of high voltage generation and measurement. b. Analyze electric field distribution and breakdown mechanisms. 2. Study Insulation Materials & Techniques a. Evaluate insulation materials and their behavior. b. Apply insulation coordination in system design. 3. Learn High Voltage Testing & Safety a. Apply standard testing methods for HV equipment. b. Follow safety procedures in HV laboratories. 4. Explore High Voltage Equipment & Applications a. Describe operation of transformers, circuit breakers, and surge arresters. b. Identify industrial and power system applications. 5. Analyze Overvoltages & Protection Techniques a. Explain lightning and switching overvoltages. b. Apply protection methods such as grounding and shielding. 6. Prepare for Industry & Research a. Solve practical high voltage engineering problems. b. Understand modern trends like HVDC and smart grids.
Indicative Contents المحتويات الإرشادية	The indicative contents are based on the course topics: • Electric field in high voltage engineering • Electrical breakdown theory • Breakdown in gases • Breakdown in liquids • Breakdown in solid materials • Generation of high voltages - o AC high voltages

	- o DC high voltages - o Impulse voltages • High voltage applications and systems • Tutorial and revision sessions
--	---

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1. Lectures: Traditional lectures can be used to deliver theoretical concepts, principles, and foundational knowledge of high voltage engineering. Instructors can present information using visual aids, multimedia presentations, and demonstrations to enhance understanding. 2. Laboratory Work: Practical laboratory sessions allow students to apply theoretical knowledge to real-world scenarios. Hands-on experiments involving high voltage equipment, measurement techniques, and diagnostic tools can help students gain practical skills and reinforce theoretical concepts. 3. Case Studies: Engaging students in case studies and real-world examples can provide a deeper understanding of high voltage engineering principles. Analyzing and solving problems encountered in actual high voltage systems can develop critical thinking and problem-solving skills. 4. Group Discussions and Brainstorming: Encouraging students to participate in group discussions and brainstorming sessions fosters active learning. It promotes collaboration, idea sharing, and the exploration of different perspectives on high voltage engineering topics. 5. Simulations and Virtual Laboratories: Utilizing computer-based simulations and virtual laboratories can provide a safe and interactive learning environment. Students can simulate high voltage systems, perform experiments, and observe the outcomes, allowing for experimentation and exploration of different scenarios. 6. Guest Lectures and Industry Experts: Inviting guest lecturers from industry or research institutions can provide valuable insights into practical applications, current trends, and emerging technologies in high voltage engineering. It offers students exposure to real-world experiences and industry perspectives. 7. Problem-Solving Exercises: Assigning problem sets and exercises related to high voltage engineering challenges students to apply their knowledge and skills to solve specific problems. These exercises can range from calculations and design tasks to analyzing system failures and proposing solutions. 8. Field Trips and Site Visits: Organizing field trips or site visits to high voltage substations, power plants, or testing facilities allows students to observe high voltage equipment in operation and gain a practical understanding of the engineering practices in real-world settings.

	9. Multimedia Resources and Online Platforms: Utilizing multimedia resources, such as video lectures, online tutorials, and interactive learning platforms, can supplement classroom teaching and provide students with additional resources for self-study and revision. 10. Assessment and Feedback: Regular assessments, including quizzes, exams, and projects, help gauge students' understanding and progress. Providing constructive feedback on their performance enables them to identify areas for improvement and reinforce their learning.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	- To develop skills and understanding of principles of operation single-phase machines. - To develop skills and knowledge of the construction of single-phase machines. - To perform equivalent circuit analysis of a single-phase Phase Induction Motor (SPIM).
---	--

	- To perform cross-field and double-field revolving theory of SPIM. - To understand starting problem of SPIM. - This course deals with all operating conditions of SPIM. - To improve the starting condition of SPIM.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	At the end of this course, students can: - Explain electro-mechanical energy conversion concepts and their application in electrical machines. - Categorize various types of electrical machines and its starting. - Analyze electrical machines individually. - Recognize SPIM and its applications. - Discuss the various operating conditions of SPIM. - Explain the two field theories that were used to start SPIM. - Explain the Analysis equivalent circuit of the SPIM in different cases. - Explain the starting torque of the SPIM.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A – Starting Problems and distributed field</u> Introduction, Single phase induction motors (SPIM): Principal of operations, Types of SPIM, Motors with main winding only, Cross field theory, Rotating field theory (Double-field revolving theory), Transformer voltage, Rotational voltage, Torque speed characteristic, Fields in SPIM. [14 hrs.] Revision problem and tutorial classes [5 hrs.] Quizzes [1 hr.] <u>Part B- Equivalent Circuit and Modeling Cases</u> Equivalent circuit, Power diagram, Two phase induction motor, Symmetrical two-phase motor supplied from two-phase balance system, Symmetrical two-phase motor supplied from two phase unbalance system, Unsymmetrical two-phase motor supplied from two phase unbalance system. [16 hrs.] Revision problem and tutorial classes [12 hrs.] Quizzes [1 hr.] <u>Part C- Special cases and starting Torque</u> Special cases, SPIM with main and auxiliary windings, Improvement of torque production in SPIM, starting torque, adding resistance with auxiliary winding, adding capacitor with auxiliary winding, and performance improvement. [6 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [1 hr.]
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	This unit aims to introduce students to various power generation technologies, such as thermal power plants, hydroelectric power plants, nuclear power plants, and others in addition to direct generation systems. It covers their characteristics, operating principles, components, efficiency, primary energy sources, and provides examples of power generation calculations. The unit also explains voltage and frequency regulation in power plants.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1- Define about primary energy sources, their classifications, generator construction and operation. 2- Understand and study the equipment attached to power plants. 3- Study the construction, operation, and components of thermal power plants, and calculate efficiency and fuel quantities. 4- understand the construction and operation of gas turbines and diesel generators, fuel calculations, and work within combined cycle power plants. 5- Identify hydropower plants, study their classifications according to height, its parts and operation and calculations with examples. 6- Study the operation and installation of nuclear power plants. 7- Understand the direct energy generation systems in general. 8- Define Magneto-hydrodynamic generator (MHD): its structure and operation with its open-cycle and combined systems. 9- understand the DC, AC, and static excitation systems. 10- Define voltage regulators (AVR) and their components, and control speed and frequency using a speed governor. Also, understand the operation of a SCADA system.
	W1-W2 Primary energy sources and generation principles • Generation concepts and types of power plants • Primary energy sources and their classifications • Energy equivalents and its conversions W3-W9 Power generation plants: types, construction, operating principles, efficiency, characteristics and energy calculations • Thermal power plants • Gas generating stations • Hydroelectric power stations

Indicative Contents المحتويات الإرشادية	• Diesel power plants • Nuclear power plants • Direct energy generation systems • Magneto-hydrodynamic generator (MHD) W10-W15 Station equipment and regulation of voltage and frequency • Main equipment for stations • DC, AC And Static excitation system • AVR Concept • Frequency and active power control • Governor system • SCADA system
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1. Lectures • Fundamental concepts, theories, and technologies in power generation plants are taught through structured lectures. • Emphasis is placed on the structure, operation, and calculation applications. 2. Problem-Solving Sessions • The practical aspects of power plants are clarified through solving problems related to voltage and frequency regulation calculations, efficiency, and power generation. • Students learn about the factors that influence power generation, efficiency, and voltage and frequency stability in power plants. • Active student participation is encouraged through class discussions. 3. Self-Study • Students are encouraged to prepare individual or group reports on power plant details based on independent study using textbooks, research, and online resources. • Homework and reading assignments contribute to a deeper understanding. 4. Ongoing Feedback

	• Regular formative feedback is provided through assignments, tests, and reports. • Feedback helps students identify their strengths and areas for improvement.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	Power and Machines lab consists of a sum of laboratories that can be listed below:- 1- Machines Laboratory. In this lab. A student can conduct a series of experiments on different types of special machines (I). This lab. is given by (Dr. Wael Hashem, Dr. Saad Enad). 2- Control Laboratory. Demonstrate his/her understanding of the basics of control system laboratory including: Basics of transfer function of any control system and represented in MATLAB software, realization and implementation of control system in time domain and frequency domain response such step response, bode plot response, Nichols. PID controller. A state space model represents the transfer function of a control system. Implement a controller, such as a state-variable feedback design or a root-locus
---	--

	design, for speed control of a DC servo motor. Principle of Arduino microcontroller with many applications. This lab. is given by (Dr. Ibrahim Ismael, Dr. Hasan Adnan). 3- Transmission Line Laboratory. To study the behavior of the transmission line under open and short circuit tests and show the Ferranti effect of the Long Transmission Line model in order to calculate the transmission line parameters for PI representation. This lab. is given by (Dr. Shakir Mahmood). 4- Renewable Energy Laboratory. Recently, renewable energy has been more popular in household and rural locations due to the reduction of conventional energy sources. This laboratory helps the student to understand and design different types of renewable energy, such as photovoltaic energy systems, wind energy systems, etc. This lab. is given by (Dr. Omer Sharafaldeen). 5- High Voltage Laboratory. The first course provides principle knowledge associated with high voltage engineering methods, techniques and equipment. It is divided into two sections. The first section presents the fundamentals of the failure mechanisms of gaseous insulation at high voltages. It also discusses consequent design principles for high-voltage equipment, for the generation of high direct, alternating, and impulse voltages for testing high-voltage equipment. This lab. is given by Dr. Dawood Najem Saleh and Dr. Riyadh Zaki).
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Upon completing this course, the student should be able to: - Understand the operation of the transmission line. - Simulate and analyze all the input and output ratings of the transmission line. - Investigate the effect of the faults that occur in the transmission line and the protection - device performance. - Learn about spatial types of machines used in real life and understand their applications.
Indicative Contents المحتويات الإرشادية	Dividing and organizing the students into sum of groups and teams. No load and blocked rotor tests of single phase induction motor Variable load variable capacitor tests of single phase induction motor Study the control system's transfer function. Block diagram reduction of a control system in MATLAB.The power station and transmission system model short circuit and no-load test on a logic line Possibility of compensation and voltage regulation of T.L Study of a photovoltaic energy system Breakdown of air in uniform & non-uniform AC Field Review Exam No load and short circuit tests three phase synchronous generator Determine the zero and negative sequence impedance of three phase synchronous generator State space model of a control system in MATLAB. Root locus design in MATLAB.

	Load flow analysis of a power system Symmetrical and unsymmetrical fault analysis of T.L Study of wind energy system Breakdown of air in uniform & non-uniform DC Field

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	The aim of this course is to provide students with a solid understanding of the analysis, modeling, and design of control systems. The course develops the ability to analyze system behavior, assess stability and performance, and design appropriate controllers for engineering applications. - Provide systematic methods for assessing stability using classical and modern techniques. - Equip students with the skills to design and tune feedback controllers (such as PID controllers) to meet given performance specifications. - Introduce students to frequency-domain analysis tools, including Bode plots,

	Nyquist plots, and root locus methods. 7. Introduce PID controller design techniques. 8. Enable students to design and tune feedback controllers to meet specified engineering requirements.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	Analyze system stability using classical stability criteria. Evaluate system performance in time and frequency domains using standard control techniques. Design and tune basic controllers (e.g., PID) to satisfy given performance specifications.
Indicative Contents المحتويات الإرشادية	Week1-Week2: Stability of Linear Control Systems • Concepts and types of stability in linear control systems • Relationship between pole locations and system stability • Methods for determining stability • Formulation of the Routh array • Stability conditions using the Routh–Hurwitz criterion • Special cases and interpretation of results Week 3: State Feedback Design • State-space representation of dynamic systems • Concept of state feedback control • Pole placement technique • Examples of MIMO systems Week 4-Week 6: Root Locus Analysis • Introduction to root locus technique • Basic properties and construction rules • Effect of system gain on pole locations • Performance improvement using root locus • Selection of appropriate gain values • Time-domain performance specifications • Worked examples of root locus analysis Week 7: Midterm Examination Week 8 - Week 12: Frequency-Domain Analysis • Introduction to frequency-domain methods • Nyquist stability concept

	• Relationship between frequency response and stability • Construction of Nyquist plots • Application of the Nyquist stability criterion • Analytical and design examples • Magnitude and phase plots • Frequency response characteristics • Gain and phase margins • Manual construction of Bode plots • Logarithmic approximation techniques • Interpretation of results Week 13 – Week 15: Control System Design • Systematic design procedure • Integration of time-domain and frequency-domain methods • Controller selection • Structure of PID controllers • Effect of proportional, integral, and derivative actions • Practical design considerations • Principles of Ziegler–Nichols tuning • Open-loop and closed-loop tuning methods
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1. Lectures • Structured lectures introduce fundamental concepts, theories, and analytical techniques in control systems. • Emphasis is placed on conceptual understanding, mathematical formulation, and physical interpretation. 2. Problem-Solving Sessions • Guided tutorials focus on solving numerical and analytical problems. • Students practice stability analysis, controller design, and performance evaluation.

	- Active student participation is encouraged through in-class discussions. 3. Project-Based Learning - Individual or group mini-projects involve modeling, analysis, and controller design for selected systems. 4. Self-Directed Learning - Students are encouraged to engage in independent study through textbooks, research papers, and online resources. - Homework assignments and reading tasks support deeper understanding. 5. Continuous Feedback - Regular formative feedback is provided through assignments, quizzes, and reports. - Feedback helps students identify strengths and areas for improvement.

Module Aims, Learning Outcomes and Indicative Contents	
أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية	
Module Aims أهداف المادة الدراسية	The objective of Power system analysis is for designing entire power systems consisting of generators, transformers, capacitor banks, shunt elements, transmission lines and so on. Power system analysis makes sure the equipment works together so that the required power is delivered to the load centers at the prescribed voltage and frequency, and no component in the network is overloaded and no-fault condition jeopardizes the system.
Module Learning Outcomes	9. Acquiring knowledge of modern techniques that support the development of electrical power stations. 10. Understanding the basic concepts of troubleshooting in electrical

مخرجات التعلم للمادة الدراسية	power stations and transmission lines. 11. Understanding the fundamentals of electrical power transmission and distribution. 12. Understanding the basics of dealing with electrical power systems. 13. Building the scientific foundation for students in the field of designing and constructing power systems and transmission lines. 14. Training students on modern techniques in electrical fault diagnosis and repair. 15. Studying the fundamental concepts of building high-quality power systems. 16. Equipping students with scientific and practical skills to diagnose and repair faults in electrical power systems.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. <u>Part A -</u> Introduction; Syllabus; basic components of a power system, single line diagram, per unit analysis, generator, transformer, transmission line and load representation for different power system, Construction of Y-bus and Z-bus, Power-flow problem and equations [12 hrs.] Revision problem and tutorial classes [3 hrs.] Quizzes [1 hr.] <u>Part B-</u> Gauss-Seidel method for solving power-flow equations, Newton-Raphson method for solving power-flow equations, balanced three-phase fault, short-circuit capacity, Bus impedance matrix, Fault analysis using bus impedance matrix, Symmetrical components and unbalanced faults (Review), Economical Operation of Power System neglecting generator limits and line losses [15 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [1 hr.] <u>Part C-</u> Economical Operation of Power System with generator limits and line losses. Introduction, Classification of Power System Stability. Dynamic Equation of Synchronous Machine, Stability Analysis Swing equation, Multi machine system, Machines swinging in unison or coherently Power flow under steady state, Steady-state Stability, Transient Stability-Equal area criterion Transient Stability Applications of sudden change in power input, Critical clearing angle and critical clearing time, Application of equal area criterion 1- Sudden loss of one parallel line 2- sudden short circuit on one of parallel lines a) Short circuit at one end of line b) Short circuit at the middle of a line. [15 hrs.] Revision problem and tutorial classes [4 hrs.] Quizzes [1 hr.]
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1- Electronic illustration tools, such as presentations, slides, images, videos, and others, can be used to clarify concepts and scientific information to students. These tools can be used to illustrate examples and practical applications, present graphs and

	charts to clarify relationships and processes, and demonstrate results and statistical data. 2- Surprise daily tests can be conducted without prior notice to students to motivate them to regularly review the materials and prepare well for any test. These daily tests can be sudden and short-term, aiming to test students' immediate understanding of the study materials and concepts. As for weekly tests, they can be announced in advance to students, giving them sufficient time to prepare. The purpose of weekly tests is to assess the overall progress of students and their understanding of the study materials over a longer period. 3- Students can be given the opportunity to participate in open discussion sessions on the study topics. These sessions can be organized to allow students to discuss scientific materials, exchange ideas and opinions, ask questions, and clarify any doubts. These discussion sessions can be organized as part of the lessons or as independent activities. Additionally, students can be assigned research tasks to explore the latest applications of the scientific subject matter.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	The aim of this course is to:
	- Provide students with a comprehensive understanding of power system protection principles for major components including generators, motors, and transmission lines. - Develop the ability to analyze and evaluate protection schemes for electrical machines under normal and fault conditions. - Introduce the fundamental concepts of distance (impedance) protection, including relay characteristics, comparators, and performance under practical conditions. - Enhance students' knowledge of modern protection techniques, particularly digital (numerical) protective relays and their advantages over conventional

	systems. - Familiarize students with communication-based protection systems, specifically Power Line Carrier Communication (PLCC), and their applications in transmission networks. - Enable students to integrate and select appropriate protection strategies to ensure reliability, selectivity, and stability in power system operation.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	<i>At the end of this course, students will be able to:</i> Analyze generator protection systems by identifying fault types and evaluating appropriate protection schemes such as differential and restricted earth fault protection. Design and assess protection schemes for industrial motors, considering electrical, thermal, and mechanical fault conditions. Explain the principles of distance (impedance) protection for high-voltage transmission lines, including impedance measurement and relay operation. Derive and apply phase and magnitude comparator equations, and interpret the duality concept in determining relay characteristics and operating regions. Differentiate between distance relay types (Impedance, Reactance, and Mho) using Argand (R–X) diagrams and evaluate their performance in practical applications. Evaluate distance protection performance under abnormal conditions such as under-reach and over-reach, and recommend suitable mitigation techniques. Explain and apply digital (numerical) protective relay concepts, including basic signal processing techniques and advantages over conventional relays. Describe and evaluate Power Line Carrier Communication (PLCC) and its role in modern transmission line protection schemes. Integrate and select appropriate protection strategies to ensure reliability, selectivity, and stability in power system operation. CLO Reference LO1: Analyze generator protection systems by identifying fault types and evaluating appropriate protection schemes. LO2: Design and assess protection schemes for industrial motors under various operating and fault conditions. LO3: Explain the principles of distance (impedance) protection for high-voltage transmission lines. LO4: Derive and apply phase and magnitude comparator equations and interpret relay characteristics and operating regions. LO5: Differentiate between distance relay types (Impedance, Reactance, and Mho) using R–X diagrams and evaluate their performance. LO6: Evaluate distance protection performance under practical

	conditions such as under-reach and over-reach. • LO7: Explain and apply digital (numerical) protective relay concepts and basic signal processing techniques. • LO8: Describe and evaluate Power Line Carrier Communication (PLCC) in protective relaying systems. • LO9: Integrate and select appropriate protection strategies to ensure reliability, selectivity, and stability in power system operation
Indicative Contents المحتويات الإرشادية	Indicative content includes the following. Part A – Protection of Generators and Motors Protection of generators: types of faults (stator and rotor), abnormal operating conditions (loss of excitation, over/under voltage and frequency), generator protection schemes including differential protection and restricted earth fault (REF). Protection of industrial motors: types of faults, thermal protection, overcurrent protection, differential protection, and coordination of motor protection systems. [10 hrs.] Revision problems and tutorial classes [2 hrs.] Quizzes [1 hr.] Part B – Distance Protection of Transmission Lines High voltage transmission line protection using distance (impedance) relays. General equations of phase and magnitude comparators and duality of comparators. Determination of impedance relay characteristics and operating regions. Distance relay types based on Argand (R–X) diagram: impedance, reactance, and Mho relays. Distance protection performance under practical conditions: under-reach and over-reach. [11 hrs.] Revision problems and tutorial classes [2 hrs.] Quizzes [1 hr.] Part C – Digital Relays and Communication in Protection Digital (numerical) protective relays: principles, advantages, and basic concepts of signal processing (sampling, filtering). Power Line Carrier Communication (PLCC) in protective relaying: principles, components, and applications in transmission line protection. Integration and coordination of protection systems in modern power networks. [6 hrs.] Revision problems and tutorial classes [1 hr.] Quizzes [1 hr.]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through 1. Formal face-to-face lectures, which provide you with a focus on the core analytical material in the course, together with qualitative, alternative explanations to aid your understanding. 2. Tutorials, which allow for exercises in problem solving and allow time for you to resolve problems in understanding of lecture material.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	The module aims (derived from the course description) are: 1. To develop advanced knowledge of high voltage systems, measurements, and testing techniques. 2. To analyze over-voltage phenomena (temporary, slow-front, fast-front) and their impact on power systems. 3. To study protection methods such as earthing, shielding, and surge protection. 4. To understand insulation behavior and coordination in high voltage equipment. 5. To prepare students for safe, reliable, and efficient operation of high voltage systems in industry and research.
Module Learning	By the end of the course, students will be able to:

Outcomes مخرجات التعلم للمادة الدراسية	20. Understand High Voltage Fundamentals - Explain principles of high voltage generation and measurement. - Analyze electric field distribution and breakdown mechanisms. 21. Study Insulation Materials & Techniques - Evaluate insulation materials and their behavior. - Apply insulation coordination in system design. 22. Learn High Voltage Testing & Safety - Apply standard testing methods for HV equipment. - Follow safety procedures in HV laboratories. 23. Explore High Voltage Equipment & Applications - Describe operation of transformers, circuit breakers, and surge arresters. - Identify industrial and power system applications. 24. Analyze Overvoltages & Protection Techniques - Explain lightning and switching overvoltages. - Apply protection methods such as grounding and shielding. 25. Prepare for Industry & Research - Solve practical high voltage engineering problems. - Understand modern trends like HVDC and smart grids.
Indicative Contents المحتويات الإرشادية	The indicative contents are based on the course topics: - High voltage measurements - High voltage testing - Temporary over-voltages - Slow-front over-voltages - Fast-front over-voltages - Over-voltage protection methods - Earthing systems - Insulation coordination - Tutorial and revision

Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	11. Lectures: Traditional lectures can be used to deliver theoretical concepts, principles, and foundational knowledge of high voltage engineering. Instructors can present information using visual aids, multimedia presentations, and demonstrations to enhance understanding.

12. **Laboratory Work:** Practical laboratory sessions allow students to apply theoretical knowledge to real-world scenarios. Hands-on experiments involving high voltage equipment, measurement techniques, and diagnostic tools can help students gain practical skills and reinforce theoretical concepts.
13. **Case Studies:** Engaging students in case studies and real-world examples can provide a deeper understanding of high voltage engineering principles. Analyzing and solving problems encountered in actual high voltage systems can develop critical thinking and problem-solving skills.
14. **Group Discussions and Brainstorming:** Encouraging students to participate in group discussions and brainstorming sessions fosters active learning. It promotes collaboration, idea sharing, and the exploration of different perspectives on high voltage engineering topics.
15. **Simulations and Virtual Laboratories:** Utilizing computer-based simulations and virtual laboratories can provide a safe and interactive learning environment. Students can simulate high voltage systems, perform experiments, and observe the outcomes, allowing for experimentation and exploration of different scenarios.
16. **Guest Lectures and Industry Experts:** Inviting guest lecturers from industry or research institutions can provide valuable insights into practical applications, current trends, and emerging technologies in high voltage engineering. It offers students exposure to real-world experiences and industry perspectives.
17. **Problem-Solving Exercises:** Assigning problem sets and exercises related to high voltage engineering challenges students to apply their knowledge and skills to solve specific problems. These exercises can range from calculations and design tasks to analyzing system failures and proposing solutions.
18. **Field Trips and Site Visits:** Organizing field trips or site visits to high voltage substations, power plants, or testing facilities allows students to observe high voltage equipment in operation and gain a practical understanding of the engineering practices in real-world settings.
19. **Multimedia Resources and Online Platforms:** Utilizing multimedia resources, such as video lectures, online tutorials, and interactive learning platforms, can supplement classroom teaching and provide students with additional resources for self-study and revision.
20. **Assessment and Feedback:** Regular assessments, including quizzes, exams, and projects, help gauge students' understanding and progress. Providing constructive feedback on their performance enables them to identify areas for improvement and reinforce their learning.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	8. To develop skills and understanding of principles of operation of the different types of Special Electrical Machines. 9. To develop skills and knowledge of the construction of Special Electrical Machines. 10. To perform equivalent circuit analysis of the Special Electrical Machines. 11. To portray the torque-speed characteristics of the Special Electrical Machines. 12. To understand the applications of the Special Electrical Machines. 13. This course deals with all operating conditions of the Special Electrical Machines. 14. To explain the advantages and disadvantages of the Special Electrical
---	---

	Machines.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	At the end of this course, students can: 26. Categorize various types of the Special Electrical Machines, and it is applications. 27. Explain the construction, operation and analysis of the Reluctance motor. 28. Explain the construction, operation and analysis of the Hysteresis motor. 29. Explain the construction, operation and analysis of the Universal motor. 30. Explain the construction, operation and analysis of the Repulsion motor. 31. Explain the construction, operation and analysis of the Stepper motor. 32. Explain the construction, operation and analysis of the Linear induction motor. 33. Explain the construction, operation and analysis of the Schrage motor. 34. Explain the Permanent Magnet Synchronous Motor's (PMSM) construction, operation and analysis. 35. Explain the Pilot excitor synchronous generator with Generator excitation and voltage control systems' types, construction, operation and analysis.
Indicative Contents المحتويات الإرشادية	Indicative content includes the following: <u>Part A – Starting Problems and distributed field</u> Introduction about Special Electrical Machines, Single-phase synchronous motors: Variable Reluctance type motors, Switched Reluctance motors, Hysteresis motor. [16 hrs.] Revision problem and tutorial classes [8 hrs.] Quizzes [1 hr.] <u>Part B- Equivalent Circuit and Modeling Cases</u> Single-phase AC series commutator motor. The Universal motor. The Repulsion motor. Stepper motors: Types, construction, characteristics, equivalent circuit, applications, advantages and disadvantages. Linear induction motors: Types, features and applications. [16 hrs.] Revision problem and tutorial classes [8 hrs.] Quizzes [1 hr.] <u>Part C- Special cases and starting Torque</u> Three-phase ac commutator machines. Schrage motor. Permanent Magnet Synchronous Motor (PMSM). Pilot excitor synchronous generator, Generator excitation and voltage control systems. [16 hrs.] Revision problem and tutorial classes [8 hrs.] Quizzes [1 hr.]

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies	The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	Power and Machines lab consists of a sum of laboratories that can be listed below:- 1- Machines Laboratory. In this lab. A student can perform a series of experiments on different specialized machines (II). Also in this lab, an AC Motor Drive is used to study methods for controlling a three-phase induction motor, as well as modern methods for motor starting and dynamic braking. This lab is given by (Dr. Wael Hashem, Dr. Saad Enad). 2- Control Laboratory. Demonstrate his/her understanding of the basics of control system laboratory including: Basics of transfer function of any control system and represented in MATLAB software, realization and implementation of control system in time domain and frequency domain response such step response, bode plot response, Nichols. PID controller. State space model represents for transfer function of control system. Implement some controller such state variable feedback design and root locus design for speed control of dc servo motor. Principle of Arduino microcontroller with many applications. This lab. is given by (Dr. Ibrahim Ismael, Dr. Hasan Adnan). 3- Transmission Line Laboratory.
---	--

	To study the behavior of transmission lines under the principles of compensation and voltage regulation, along with load flow analysis and fault study. This lab. is given by (Dr. Shakir Mahmood). 4- Renewable Energy Laboratory. Recently, renewable energy has been more popular in household and rural locations due to the reduction of conventional energy sources. This laboratory helps the student to understand and design different types of renewable energy, such as photovoltaic energy systems, wind energy systems, etc. This lab. is given by (Dr. Omer Sharaf-aldeen, Raghad Adeeb). 5- High Voltage Laboratory. This lab provides principal knowledge associated with high voltage engineering methods, techniques, and equipment. It is divided into two sections. The first section uses methods to measure the insulation resistance, and the second section measures soil resistance (Dr. Dawood Najem Saleh and Dr. Riyadh Zaki).
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	At completing this course, the student should be able to: 36. Understand the operation of the transmission line. 37. Simulate and analyze all the input and output ratings of the transmission line. 38. Investigate the effect of the faults that occur in the transmission line and the protection 39. device performance. 40. Learn about spatial types of machines used in real life and understand their applications.
Indicative Contents المحتويات الإرشادية	Dividing and organizing the students into sum of groups and teams. Examine the construction of the universal motor, then determine the brushes' neutral point and find its no-load and full load characteristics while operating on AC and DC. Compare the starting torque for the Universal motor on both AC and DC supply. Dependence of the universal motor speed on the voltage while operating on an AC supply, then observe the effect of removing the compensating winding on both the AC and DC supply. Observe the effect of the universal motor inductive compensation on both AC and DC. Modern methods to control the starting and braking of a three-phase induction motor. State variable feedback design. Root locus design in MATLAB. High Voltage safety Breakdown voltage for the DC field. Soil resistivity test. polarity effects on breakdown voltage. Operation of Boost converters in PV System. Effect of irradiation and temperature on the PV Panel Output Power Generation. The power station and transmission system model short circuit and no-load test on a logic line Exam

Learning and Teaching Strategies

استراتيجيات التعلم والتعليم

Strategies

Focus on hands-on experiments that reinforce theoretical concepts. Use a combination of demonstrations, simulations, and real-world case studies to illustrate the functioning of machines and power systems. Encourage problem-solving and data analysis during experiments to foster critical thinking. Incorporate safety protocols and real-time troubleshooting to prepare students for industrial applications. Finally, assess learning through practical reports, quizzes, and project-based assignments.

Delivery Plan (Weekly Syllabus)

المنهاج الاسبوعي النظري

Week

	Material Covered
Week 1	Dividing and organizing the students into sum of groups and teams.
Week 2	Examine the construction of the universal motor then determine the brushes neutral point and find its no-load and full load characteristics while operating on AC and DC.
Week 3	Compare the starting torque for the Universal motor on both AC and DC supply. Dependency of the universal motor speed on the voltage while operating on AC supply then observe the effect of removing the compensating winding on both AC and DC supply. Observe the effect of the universal motor inductive compensation on both AC and DC.
Week 4	Root locus design in Matlab.

Week 5	State variable feedback design.
Week 6	Modern methods to control the starting and braking of a three phase induction motor.
Week 7	Operation of Boost converters in PV System.
Week 8	Effect of irradiation and temperature on the PV Panel Output Power Generation.
Week 9	Review
Week 10	Exam
Week 11	Breakdown voltage for DC field.
Week 12	Soil resistivity test.
Week 13	polarity effects on breakdown voltage.
Week 14	The power station and transmission system model short circuit and no-load test on a logic line
Week 15	Exam

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	- To develop applied skills in employing advanced electromagnetic laws to analyze electromechanical energy conversion systems (motors, generators, and relays). - To apply physical principles in modeling and optimizing renewable energy systems, specifically solar photovoltaics and wind turbines. - To deepen the understanding of solid-state physics as a foundation for designing and manufacturing power electronic components like Thyristor and Triac.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	- Ability to calculate electromagnetic and electrostatic forces in micro-electromechanical systems (MEMS). - Understanding photon physics and charge carrier dynamics to analyze the efficiency of solar cells.

	Analyzing the physical and thermal behavior of Thyristors and Triacs in high-power circuits.
Indicative Contents المحتويات الإرشادية	Part I: Physics of electromechanical forces, magnetic circuits, and electrostatic relays. Part II: Photon physics, energy bandgaps, solar conversion systems, and wind dynamics. Part III: Advanced semiconductor physics, carrier transport, and fabrication technology for power electronics and thermal sensors.
Learning and Teaching Strategies استراتيجيات التعلم والتعليم	
Strategies	1. Lectures - Structured lectures introduce fundamental concepts, theories, and analytical techniques in control systems. - Emphasis is placed on conceptual understanding, mathematical formulation, and physical interpretation. 2. Problem-Solving Sessions - Guided tutorials focus on solving numerical and analytical problems. - Students practice stability analysis, controller design, and performance evaluation. - Active student participation is encouraged through in-class discussions. 3. Project-Based Learning - Individual or group mini-projects involve modeling, analysis, and controller design for selected systems. 4. Self-Directed Learning

	- Students are encouraged to engage in independent study through textbooks, research papers, and online resources. - Homework assignments and reading tasks support deeper understanding. 5. Continuous Feedback - Regular formative feedback is provided through assignments, quizzes, and reports. Feedback helps students identify strengths and areas for improvement.

Module Aims, Learning Outcomes and Indicative Contents

أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية

Module Aims أهداف المادة الدراسية	• Strengthen chemical understanding of materials used in electrical engineering. • Explain chemical degradation and aging of insulation systems. • Support material selection for high-voltage and power applications. • Introduce chemical aspects of energy storage and sustainability. • Prepare students for advanced courses in high-voltage engineering, power systems, and renewable energy.
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	1. Explain atomic bonding and chemical structure of electrical materials. 2. Analyze chemical aging and degradation mechanisms in insulation systems. 3. Describe dielectric behavior of gases and liquids used in power equipment. 4. Evaluate corrosion and electrochemical effects in grounding systems. 5. Assess chemical principles behind modern energy storage technologies. 6. Apply sustainability concepts to electrical engineering materials.
Indicative Contents المحتويات الإرشادية	Part A – Chemical Foundations and Electrical Engineering Materials Atomic structure and periodic trends; chemical bonding and relation to electrical conductivity, dielectric strength, and thermal stability; structure-property relationships in conductors, insulators, and semiconductors. Metals and alloys; PVC, XLPE, epoxy, silicone rubber, ceramics, glass, composite insulation systems, fillers, stabilizers, and additives. [21 hrs.] Part B – Aging, Degradation, and Dielectric Media

	Oxidation, thermal degradation, hydrolysis, moisture effects, electrical treeing, water treeing, radiation, environmental effects, insulation lifetime, dielectric gases, SF6 chemistry and decomposition, eco-friendly alternatives, mineral and ester transformer oils, contamination, moisture, acidity, dissolved gases, oil aging and regeneration. [21 hrs.] Part C – Electrochemistry, Energy Storage, and Sustainability Electrochemical reactions, corrosion mechanisms, grounding systems, coatings, cathodic protection, battery chemistries, degradation, safety, recycling, environmental impact, green insulation materials, SF6 replacement, and regulatory considerations. [21 hrs.]
