

# Well Logging

Mining Engineering Department/ 3<sup>rd</sup> Year

Dr. Maha Muneeb

# Fluid Drilling Mud

There are two main types of fluid drilling: *Water-Based mud (WBM)* and *Oil-Based mud (OBM)*.

## 1- Invasion with Water – Based Drilling Muds

- In *Water-Bearing Formations*, the mud filtrate **replaces all** of the formation water close to the borehole and this decrease with depth of invasion.
- In *Oil-Bearing Formations*, the mud filtrate **replaces all** the formation water and **most of the oil** close to the borehole wall, again decreasing with distance into the formation

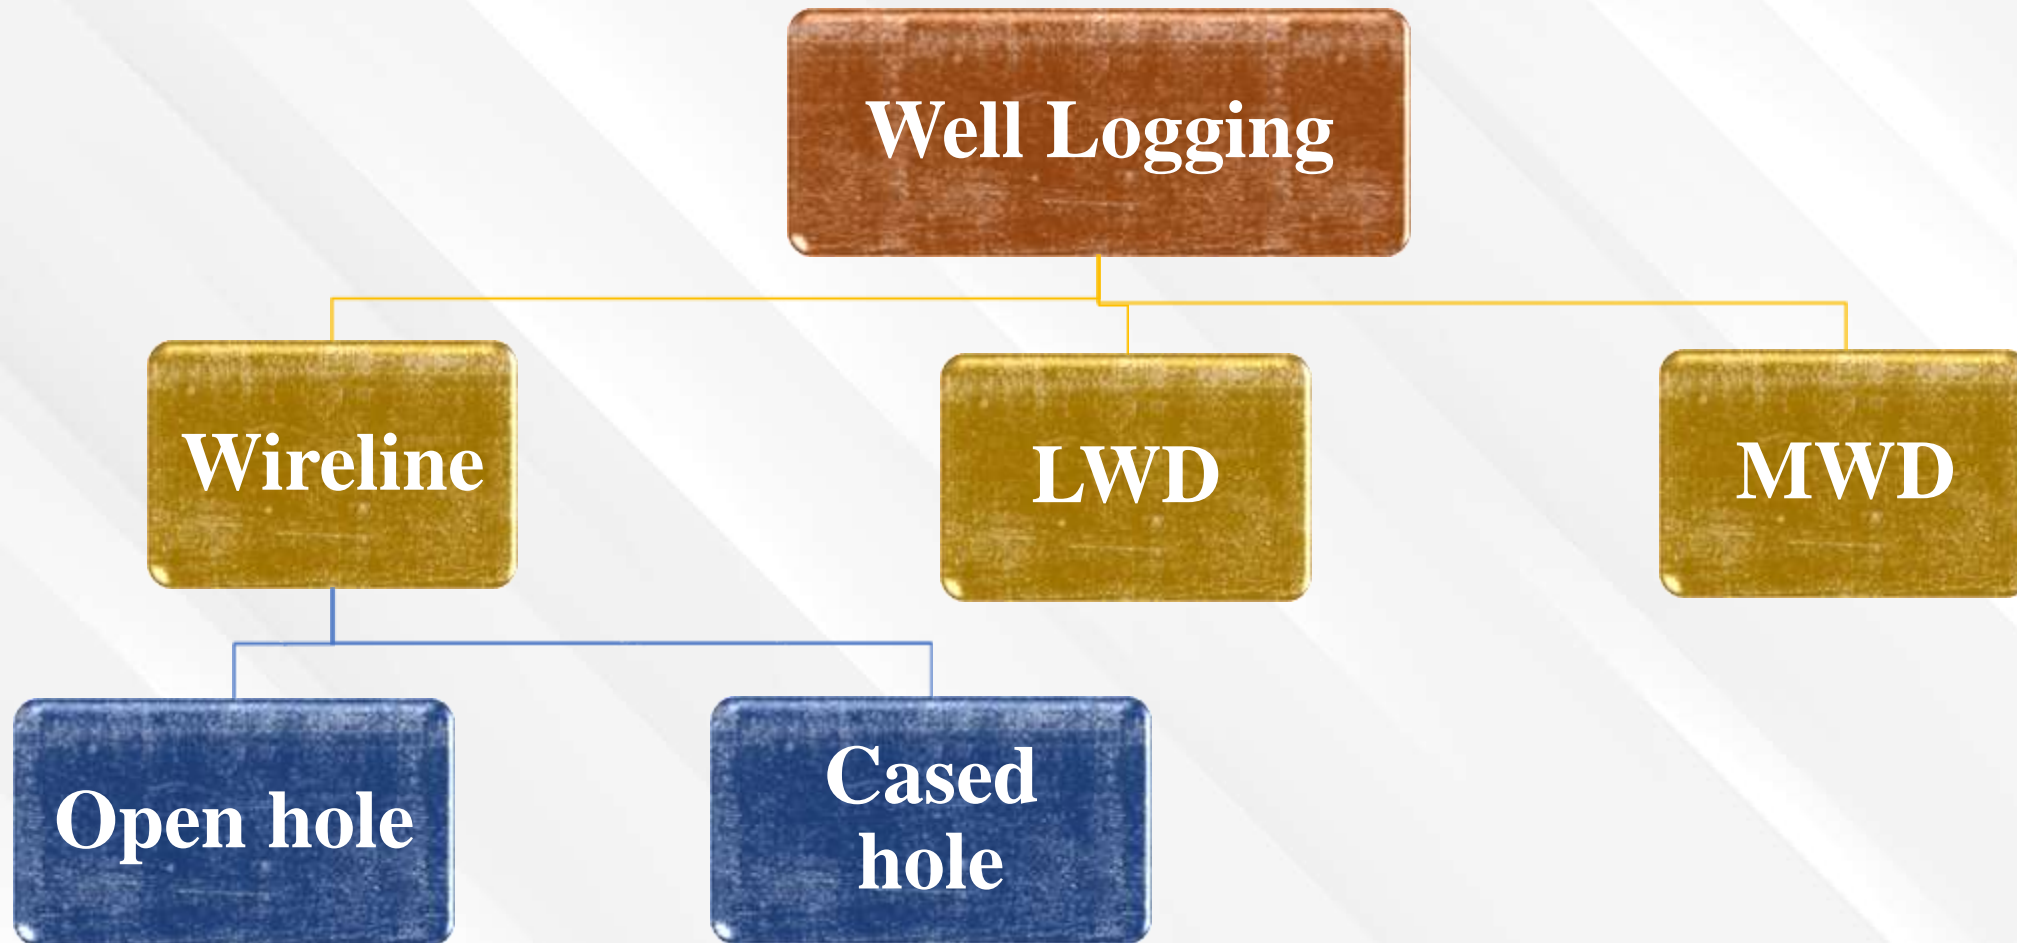

## 2- Invasion with Oil – Based Drilling Muds

- In *Water-Bearing Formations*, the oil-based mud filtrate *does not replace* all the formation water even close to the borehole wall.
- In *Oil-Bearing Formations*, the oil-based mud filtrate *only replaces* the oil in the formation, leaving the formation water in place.

# Well-Logging Techniques:

# Wireline Logging

## ➤ **Open-hole logging:**

operations on a well before the wellbore has been cased and cemented.

## ➤ **Cased hole logging:**

logging measurements through the well casing

# Logging While Drilling (LWD):

Continuous measurement taken by down-hole sensors during drilling and its measures geological parameters while the well is being drilled, particularly in offshore or horizontally drilled wells.

# Measurement While -Drilling (MWD):

It's the process by which certain information is measured near the bit and transmitted to surface without interrupting normal drilling operations.

It is including pressure, temperature, rotational speed of the drill string, mudflow volume. It is important for a safe drilling operation also in *deviated and horizontal wells*

# Why Study Well Logs (Importance of Well Logging)

1. Lithology with exact depth of formation and rock boundaries.
2. Rock properties, rock composition (mineralogy) and special interest are reservoir properties (porosity, saturation, permeability).
3. Location of fluid contacts (e.g. gas/oil, gas/water and oil/water contacts).
4. Estimate of the volume of hydrocarbon per cubic meter, and type of this hydrocarbon.
5. Identification of geological environments.
6. Identification of reservoir pressure and Porosity/pore-size distribution.

# Well Logging Methods

There are many different methods of well logging that can be employed for solving various problems connected with geophysical exploration.

There are **three** general types of logs:

## **1- Electrical**

- Spontaneous potential
- Resistivity

## **2- Nuclear**

- Gamma Ray
- Density
- Neutron

## **3- Acoustic**

- Sonic

# The Components of Well Log Paper

## 1- Log Header

- *Background well information*

- *Borehole conditions*

## 2- Main Log

## 3- Log Trailer
