

## Academic Program Description Form

**University Name:** University of Mosul

**Faculty/Institute:** College of Petroleum and Mining Engineering

**Scientific Department:** Department of Petroleum Reservoir Engineering

**Academic or Professional Program Name:** Bachelor / Petroleum Reservoir Engineering

**Final Certificate Name:** Bachelor of Engineering in Petroleum Reservoir Engineering

**Academic System:** Bologna and Semester System

**Description Preparation Date:** 7 May 2025

**File Completion Date:** 14 September 2025 (Revised Version)

**Signature:**

**Head of Department Name:**

Lect. Dr. Maha Muneeb Al-Dabagh

**Date:** 14/9/2025

**Signature:**

**Dean Scientific Associate Name:**

Asst. Prof. Dr. Muneef Mahjoob Mohammed

**Date:** 14/9/2025

The file is checked by:

Division of Quality Assurance and Performance Evaluation

Director of the Quality Assurance and Performance Evaluation Division: Sarah Jamal Halata

**Date:** 14/9/2025

**Signature:**

**Approval of the Dean**

Malan H. Abdullah

14.9.2025

## **1. Program Vision**

The leadership in petroleum reservoir engineering education and research, through preparing engineers specialized in oil and gas who possess modern knowledge and skills to efficiently utilize resources, achieve sustainability, support national development, and enhance competitiveness globally.

## **2. Program Mission**

The Department of Petroleum Reservoir Engineering is committed to preparing distinguished engineers in oil and gas exploration and production through modern theoretical and practical curricula, integrating artificial intelligence and digital transformation technologies to enhance industry efficiency. The department also supports governmental and private sector institutions with scientific consultations and applied research, promoting sustainability and environmental protection.

## **3. Program Objectives**

1. Provide modern academic programs in oil and gas engineering aligned with international standards and the needs of the labor market.
2. Enable students to use artificial intelligence and digital modeling techniques for efficient reservoir analysis and management.
3. Promote applied scientific research to address technical and environmental challenges in the oil and gas industry and support sustainability projects.
4. Build strategic partnerships with national and international oil companies to provide practical training and employment opportunities for graduates.
5. Offer technical and scientific consultations to governmental institutions and companies, contributing to efficient and environmentally responsible petroleum resource management.
6. Prepare research-oriented professionals capable of innovation, continuous development, and competing in both local and global markets.

#### 4. Program Accreditation

The College of Petroleum and Mining Engineering, including the Petroleum Reservoir Engineering Department, is committed to achieving the nine standards outlined in the Iraqi Engineering Education Accreditation Council's guide

#### 5. Other external influences

Non

#### 6. Program Structure

| Program Structure        | Number of Courses | Credit hours | Percentage | Reviews*  |
|--------------------------|-------------------|--------------|------------|-----------|
| Institution Requirements | 4                 | 9            | 59%        | Essential |
| College Requirements     | 7                 | 46           | 26%        |           |
| Department Requirements  | 45                | 120          | 69%        |           |
| Summer Training          | Available         |              |            |           |
| Other                    |                   |              |            |           |

\* This can include notes whether the course is basic or optional.

#### 7. Program Description

| Year/Level |  | Course Name | Credit Hours |
|------------|--|-------------|--------------|
|------------|--|-------------|--------------|

|                        | PRE 319 | Production engineering II                         | --- | 3 |
|                        | PRE 320 | Natural gas technology                            | --- | 3 |
|                        | PRE 321 | Seismic interpretation                            | 3   | 2 |
|                        | PRE 322 | Formation evaluation                              | 2   | 2 |
| Fourth Year (Semester) | PRE 411 | Enhanced oil recovery I                           | --- | 3 |
|                        | PRE 412 | Reservoir Characterization                        | 3   | 2 |
|                        | PRE 419 | Petroleum modelling                               | 3   | 2 |
|                        | PRE 414 | Advanced reservoir engineering                    | 3   | 2 |
|                        | PRE 415 | Core analysis                                     | 2   | 2 |
|                        | ---     | Graduation project                                | 3   | 1 |
|                        | PRE 417 | Enhanced oil recovery II                          | --- | 3 |
|                        | PRE 418 | Reservoir simulation                              | 2   | 2 |
|                        | PRE 413 | Petroleum Economics                               | --- | 2 |
|                        | PRE 420 | Well testing                                      | 3   | 2 |
|                        | PRE 421 | Reservoir management                              | 2   | 2 |

## 8. Expected learning outcomes of the program

### Knowledge

**A1:** The ability to distinguish, identify, define, formulate, and solve engineering problems by applying the principles of engineering, science, and mathematics.

**A2:** The ability to recognize the continuous need for professional knowledge development, and to know how to search for, evaluate, assemble, and properly apply it.

### Skills

**B1:** The ability to produce engineering designs that meet desired needs within specific constraints by applying both analysis and synthesis in the design process.

**B2:** The ability to conduct appropriate measurements and tests with quality assurance, analyze and interpret results, and use engineering judgment to draw conclusions.

**B3:** The ability to communicate effectively, both orally with groups of people and in writing with various managerial levels.

**B4:** The ability to work efficiently within teams, set objectives, plan activities, meet deadlines, and manage risks and uncertainties.

#### **Ethics**

**C1:** The ability to recognize ethical and professional responsibilities in engineering issues.

**C2:** The ability to make sound decisions while considering global economic, environmental, and societal impacts.

### **9. Teaching and Learning Strategies**

- |  |   |

## **Professional Development**

### **Mentoring new faculty members**

- **Teaching methods courses**
- **Continuing education courses**
- **Training courses**
- **Scientific seminars, workshops, and study sessions**

### **Professional development of faculty members**

A plan to develop the skills of the teaching staff in the Petroleum Reservoir Engineering Department by involving the largest possible number in local and international conferences, continuing education courses, scientific seminars, workshops, and study sessions held both inside and outside the university.

## **12. Acceptance Criterion**

- 1– Iraqi nationality.
- 2– Holds an Iraqi preparatory school certificate endorsed by the General Directorate of Education in the governorate, or an equivalent certificate.
- 3– The student must be born in 2000 or later.
- 4– Must pass the medical examination according to the specific requirements of each program. Admitted students to colleges and institutes must undergo a (CBC) or (Hb–Electrophoresis) test at specialized medical centers. Blind students who meet the application requirements are allowed to apply through the central admission system for suitable humanitarian studies.
- 5– Must be fully dedicated to studying, and it is not permitted to combine employment with full–time study in morning colleges and institutes. This includes all employees of governmental institutions. To continue studying, employees must obtain a study leave from their departments according to the current regulations. It is also not permitted to

pursue two academic programs simultaneously; if such a case is proven, the Ministry will be notified to cancel the admission. If a student has two different admissions in the same year, they must choose one to cancel.

6- Must be a graduate of:

a. The current academic year.

b. The previous academic year, provided they were not accepted centrally into any college or institute. They can be admitted through the "previous year graduates" channel based on the minimum admission scores for their year of graduation, provided they did not enroll in private evening studies, public education, private morning education, or colleges affiliated with the endowments or institutes affiliated with other ministries.

7- Students returning from abroad in the tow academic year (2023/2024 and 2024/2025) are allowed to apply via the electronic portal of the Directorate of Studies, Planning, and Follow-Up using their designated electronic application form. The application will be considered valid once a temporary equivalency certificate is obtained from the Ministry of Education, Equivalency and Certificates Directorate. Graduates of the previous year must apply through the Central Admission Department, International Students Section.

8- Non-Iraqi students who hold an Iraqi preparatory certificate and are centrally admitted must be formally notified to report to the Central Admission Department / International Students Section to determine whether they are exempt from or required to pay tuition fees in foreign currency, according to the regulations stated in Chapter Seven of the Student Affairs Procedures Guide and Admission Rules and Conditions.

### **13. The most important sources of information about the program**

- Textbooks and reference materials available in: free education resources, department library, college library, and the central library
- Scientific resources available on the electronic space (online resources)

## 14. Program Development Plan

To develop the program, a comprehensive plan is established focusing on improving academic quality, enhancing collaboration with industry, and developing the necessary skills for students to face future challenges in the energy sector. The focus areas include:

### 1. Curriculum Update

- **Course Review:** Periodic assessment and review of the curriculum to ensure alignment with the latest advancements in petroleum reservoir engineering.
- **Introduction of New Courses:** Offering courses that cover new and innovative technologies, such as digital oil extraction and the use of artificial intelligence in reservoir analysis.

### 2. Industry Collaboration

- **Industrial Partnerships:** Developing partnerships with oil and gas companies and technology firms to provide training opportunities and collaborative research.
- **Joint Projects:** Encouraging students to participate in joint research projects with industry to apply their knowledge in real-world working environments.

### 3. Enhancing Infrastructure and Resources

- **Advanced Laboratories:** Upgrading laboratories and providing state-of-the-art equipment to enable realistic experiments and simulation of oil extraction processes.
- **Access to Data and Software:** Providing access to industry databases and modern engineering software to strengthen students' learning and research capabilities.

### 4. Student Skills Development

- **Workshops and Seminars:** Regular organization of workshops and seminars with industry experts to familiarize students with the latest challenges and innovations in the field.

- **Soft Skills Training:** Offering programs aimed at developing essential soft skills such as leadership, communication, and teamwork to prepare students for working in multidisciplinary teams.

#### **5. Performance Evaluation and Monitoring**

- **Continuous Evaluation System:** Developing a system for regular assessment of the program's performance, focusing on feedback from students and faculty members.

| Program Skills Outline       |             |                                 |                   |                                    |    |        |    |    |        |    |    |
|------------------------------|-------------|---------------------------------|-------------------|------------------------------------|----|--------|----|----|--------|----|----|
|                              |             |                                 |                   | Required program Learning outcomes |    |        |    |    |        |    |    |
| Year/Level                   | Course Code | Course Name                     | Basic or optional | Knowledge                          |    | Skills |    |    | Ethics |    |    |
|                              |             |                                 |                   | A1                                 | A2 | B1     | B2 | B3 | B4     | C1 | C2 |
| First Year (Bologna Pathway) | PRE 111     | Geology for engineers I         | Basic             | ●                                  |    |        |    |    |        |    |    |
|                              | PRE 112     | Mechanics I                     | Basic             | ●                                  |    |        |    |    |        |    |    |
|                              | PRE 113     | Mathematics I                   | Basic             | ●                                  |    |        |    |    |        |    |    |
|                              | UOM 102     | English I (Reading and Writing) | Basic             |                                    | ●  |        |    | ●  |        |    |    |
