

✚ Educational goals :

- ✚ Forming a basic foundation for medical physics curricula, in addition to a smooth and harmonious study plan.
- ✚ Providing an advanced level of education for primary studies, maintaining the integrity of the curriculum, and constantly updating scientific plans.
- ✚ Preparing students in a focused manner in the principles of medical physics and the analytical principles required to draw conclusions from medical physics experiments.
- ✚ Providing students with the opportunity to deepen their knowledge in the various branches of medical physics so that they can see the outskirts of contemporary scientific research.
- ✚ Training students on the method of scientific research and enabling them to contribute to it under the supervision of capable researchers from the department's teaching staff.
- ✚ Qualifying students with in-depth knowledge and a degree of scientific maturity that will enable them to participate effectively in the scientific and technical aspects of development and planning programs.
- ✚ Working to complete applied and basic research in various medical physics specializations.
- ✚ Contributing to advisory and training services in addition to short courses and solving scientific and industrial problems facing development plans in Nineveh Governorate and Iraq in general.
- ✚ Continuous development of faculty members by sending them to training courses in order to maintain high levels of efficiency and performance.
- ✚ Support and encourage scientific cooperation among faculty members in the department and cooperation with other departments in the field of multi-purpose research.
- ✚ Spreading the spirit of competition and encouragement and giving the opportunity to all faculty members in the field of research and teaching.
- ✚ Preparing national cadres equipped with basic medical physics and qualified to contribute to the development of the country and society.
- ✚ sustainable development.
