

## Lecture-2

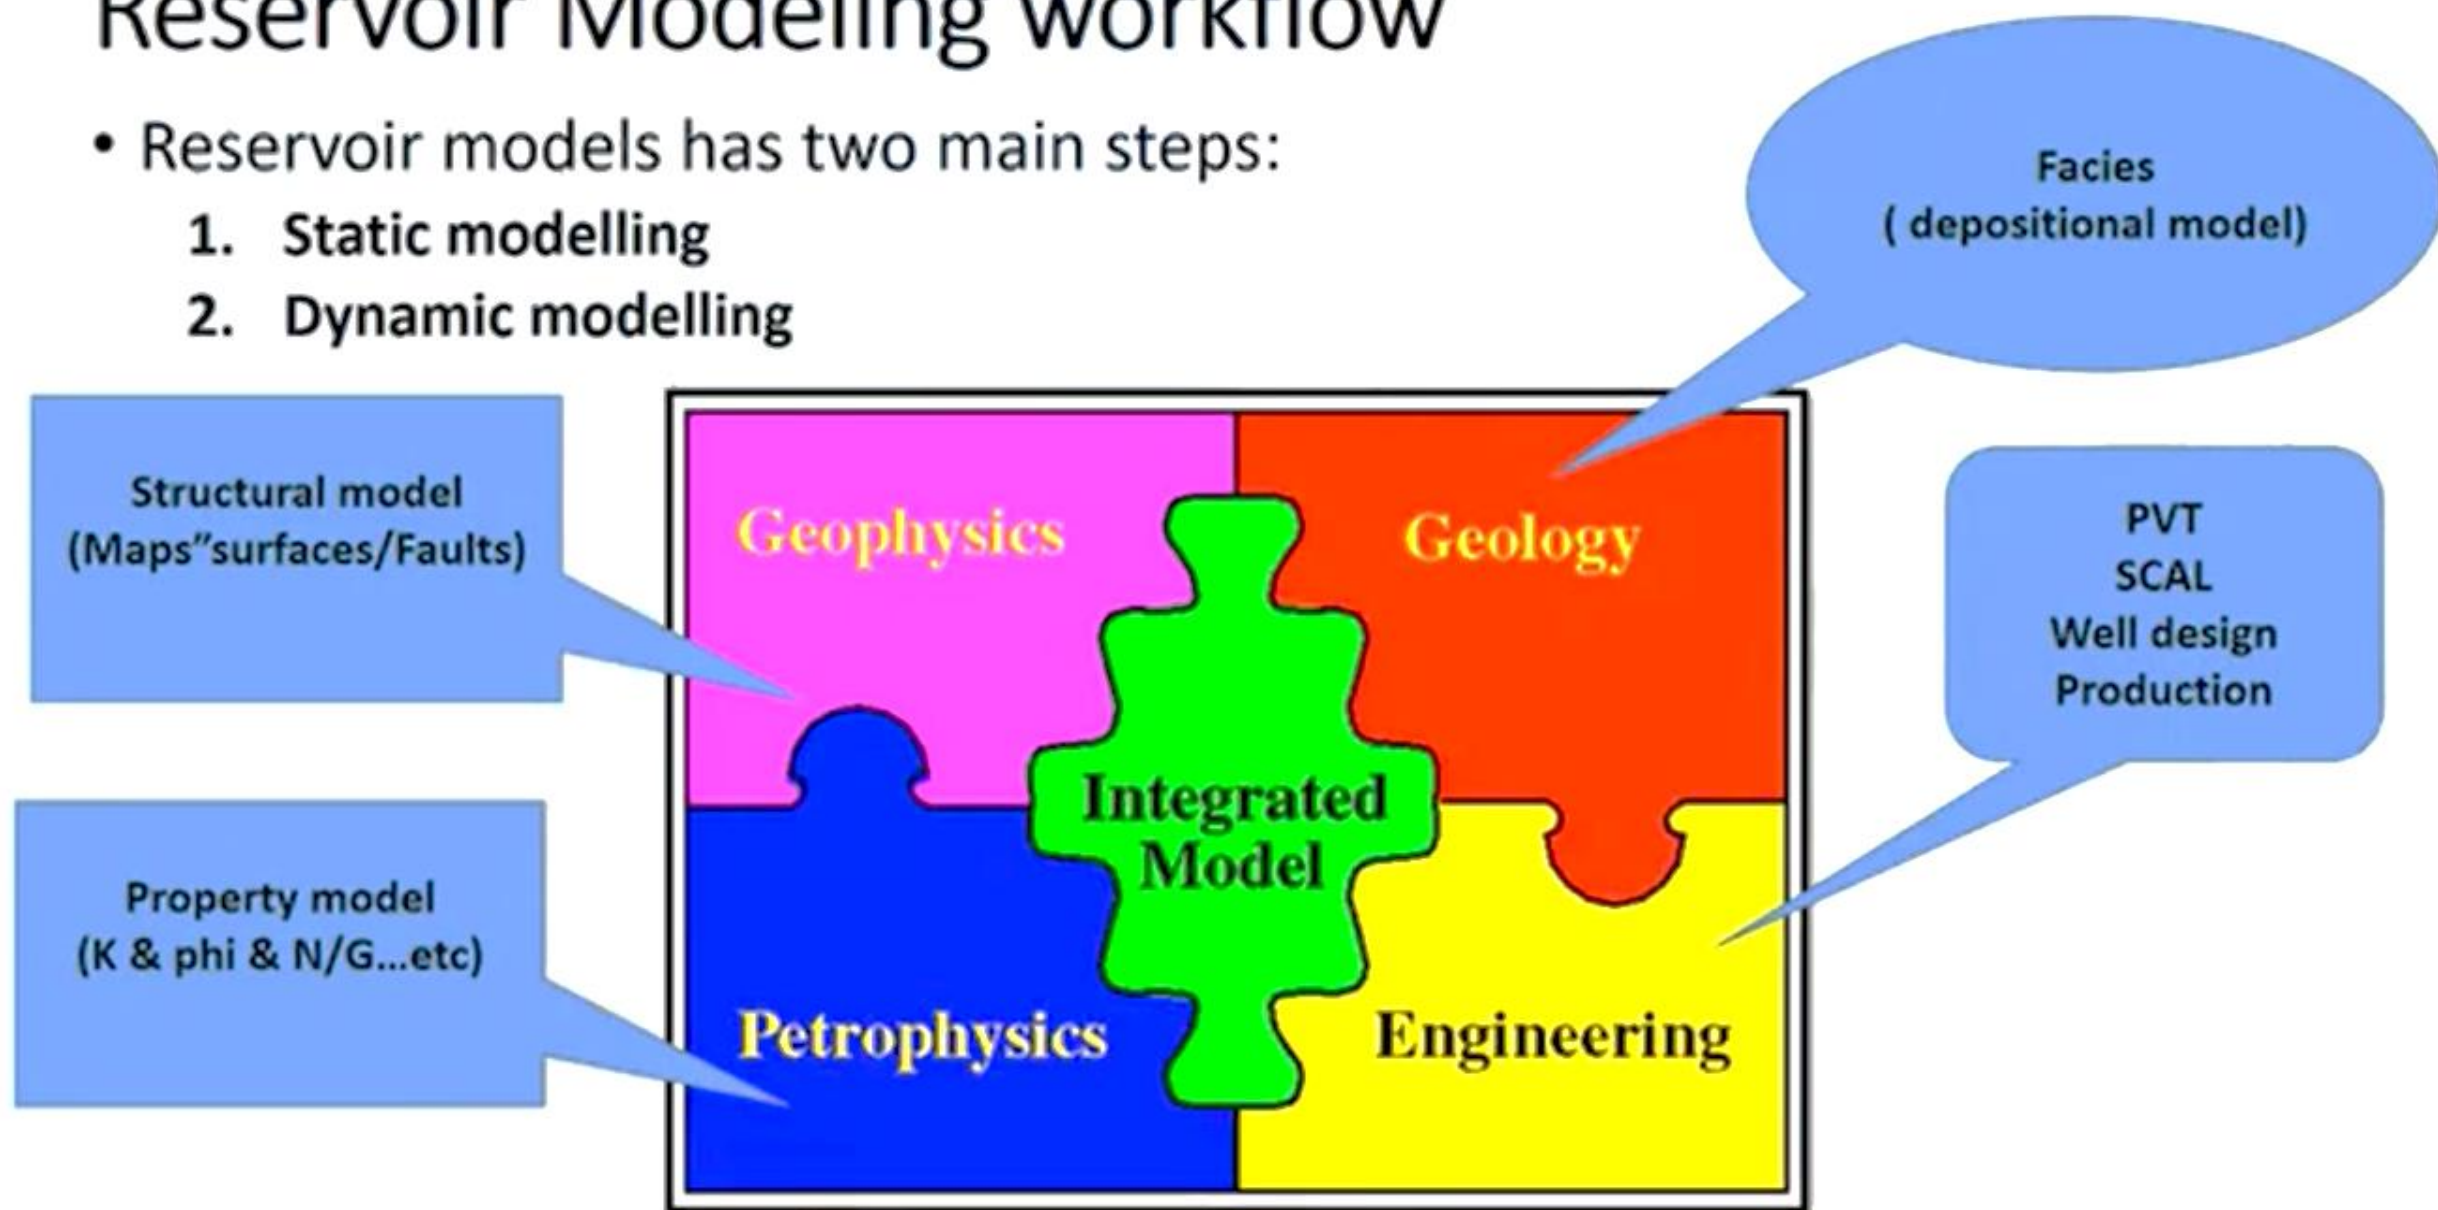

# Reservoir Modeling

Petroleum & Mining Engineering Collage/ Fourth Year

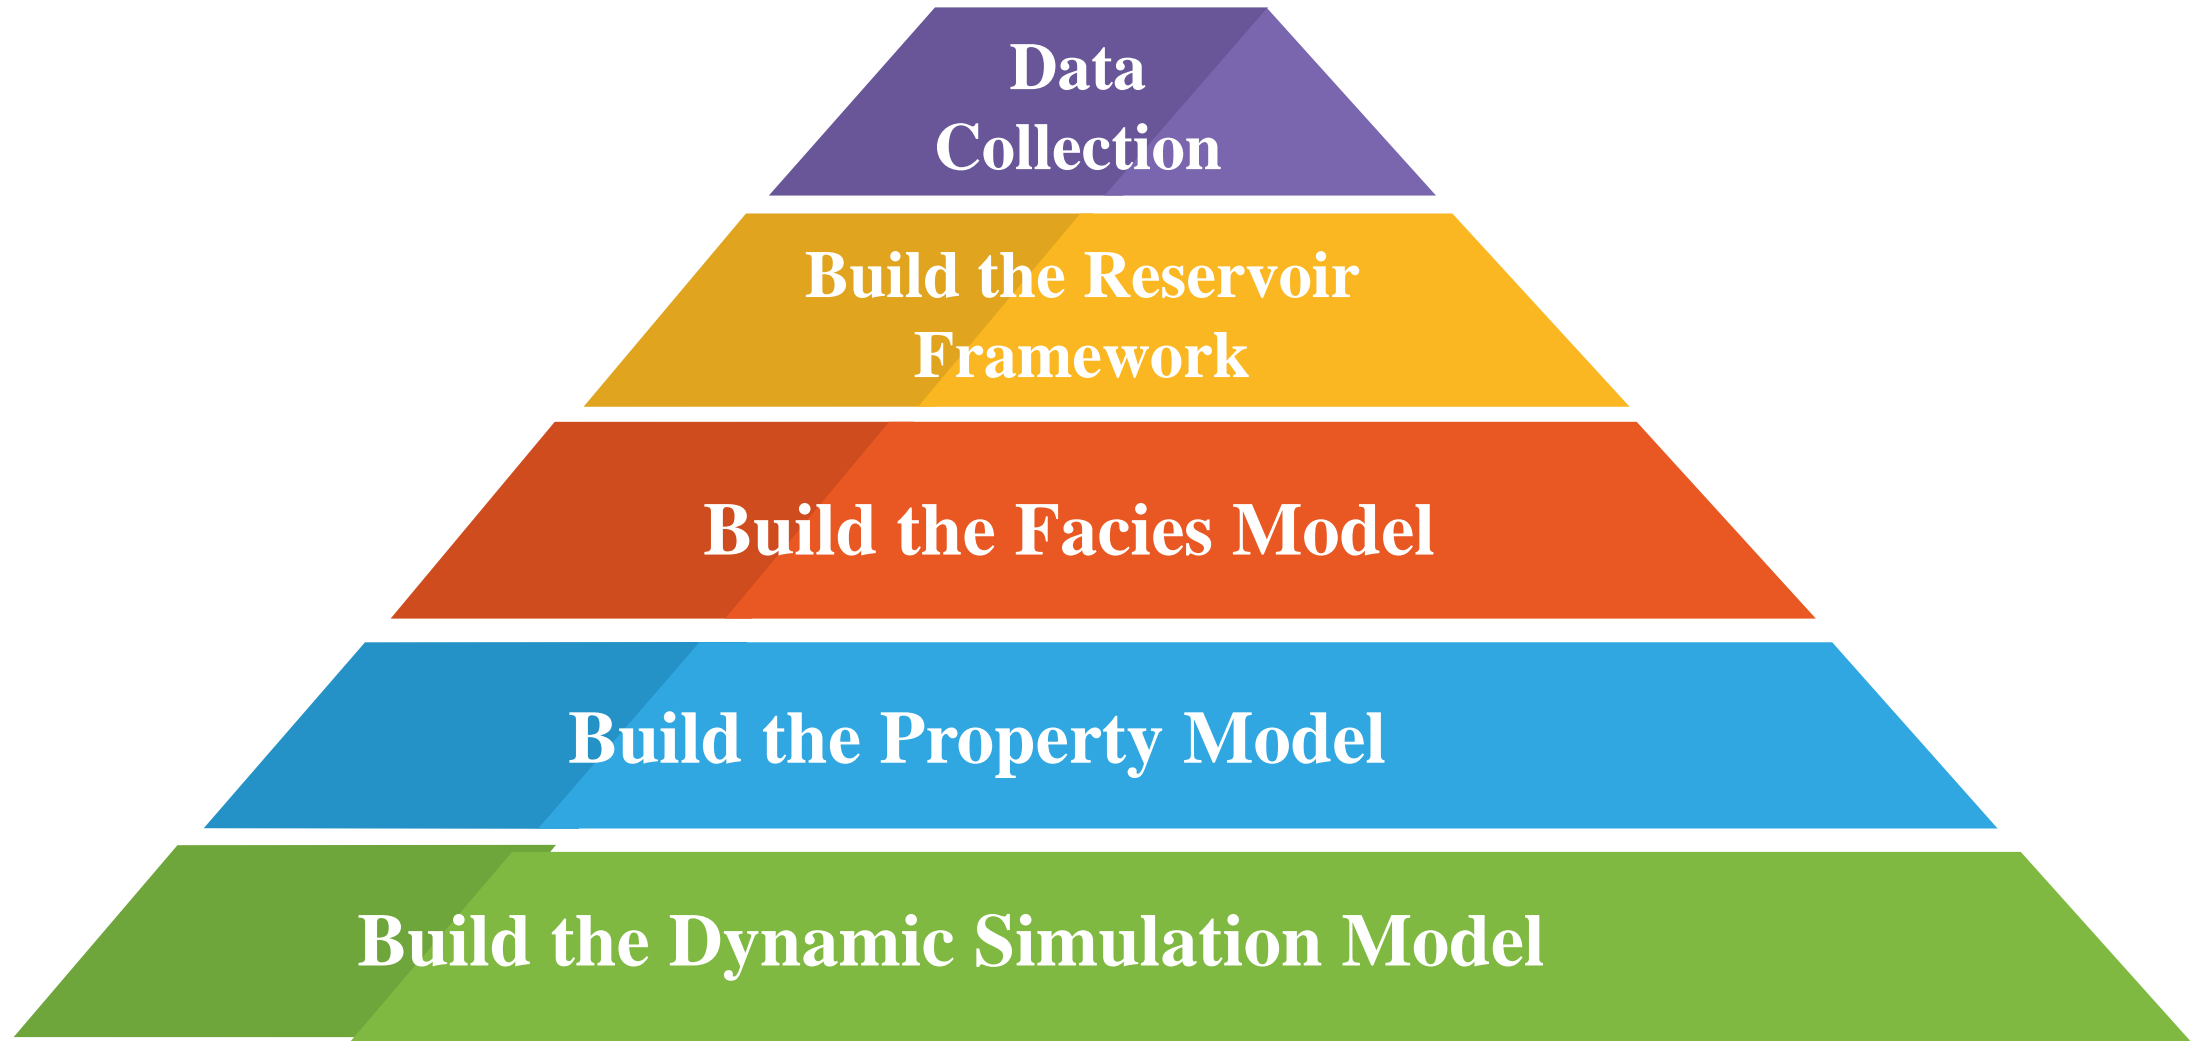

Dr. Maha Muneeb

# Reservoir Modeling workflow

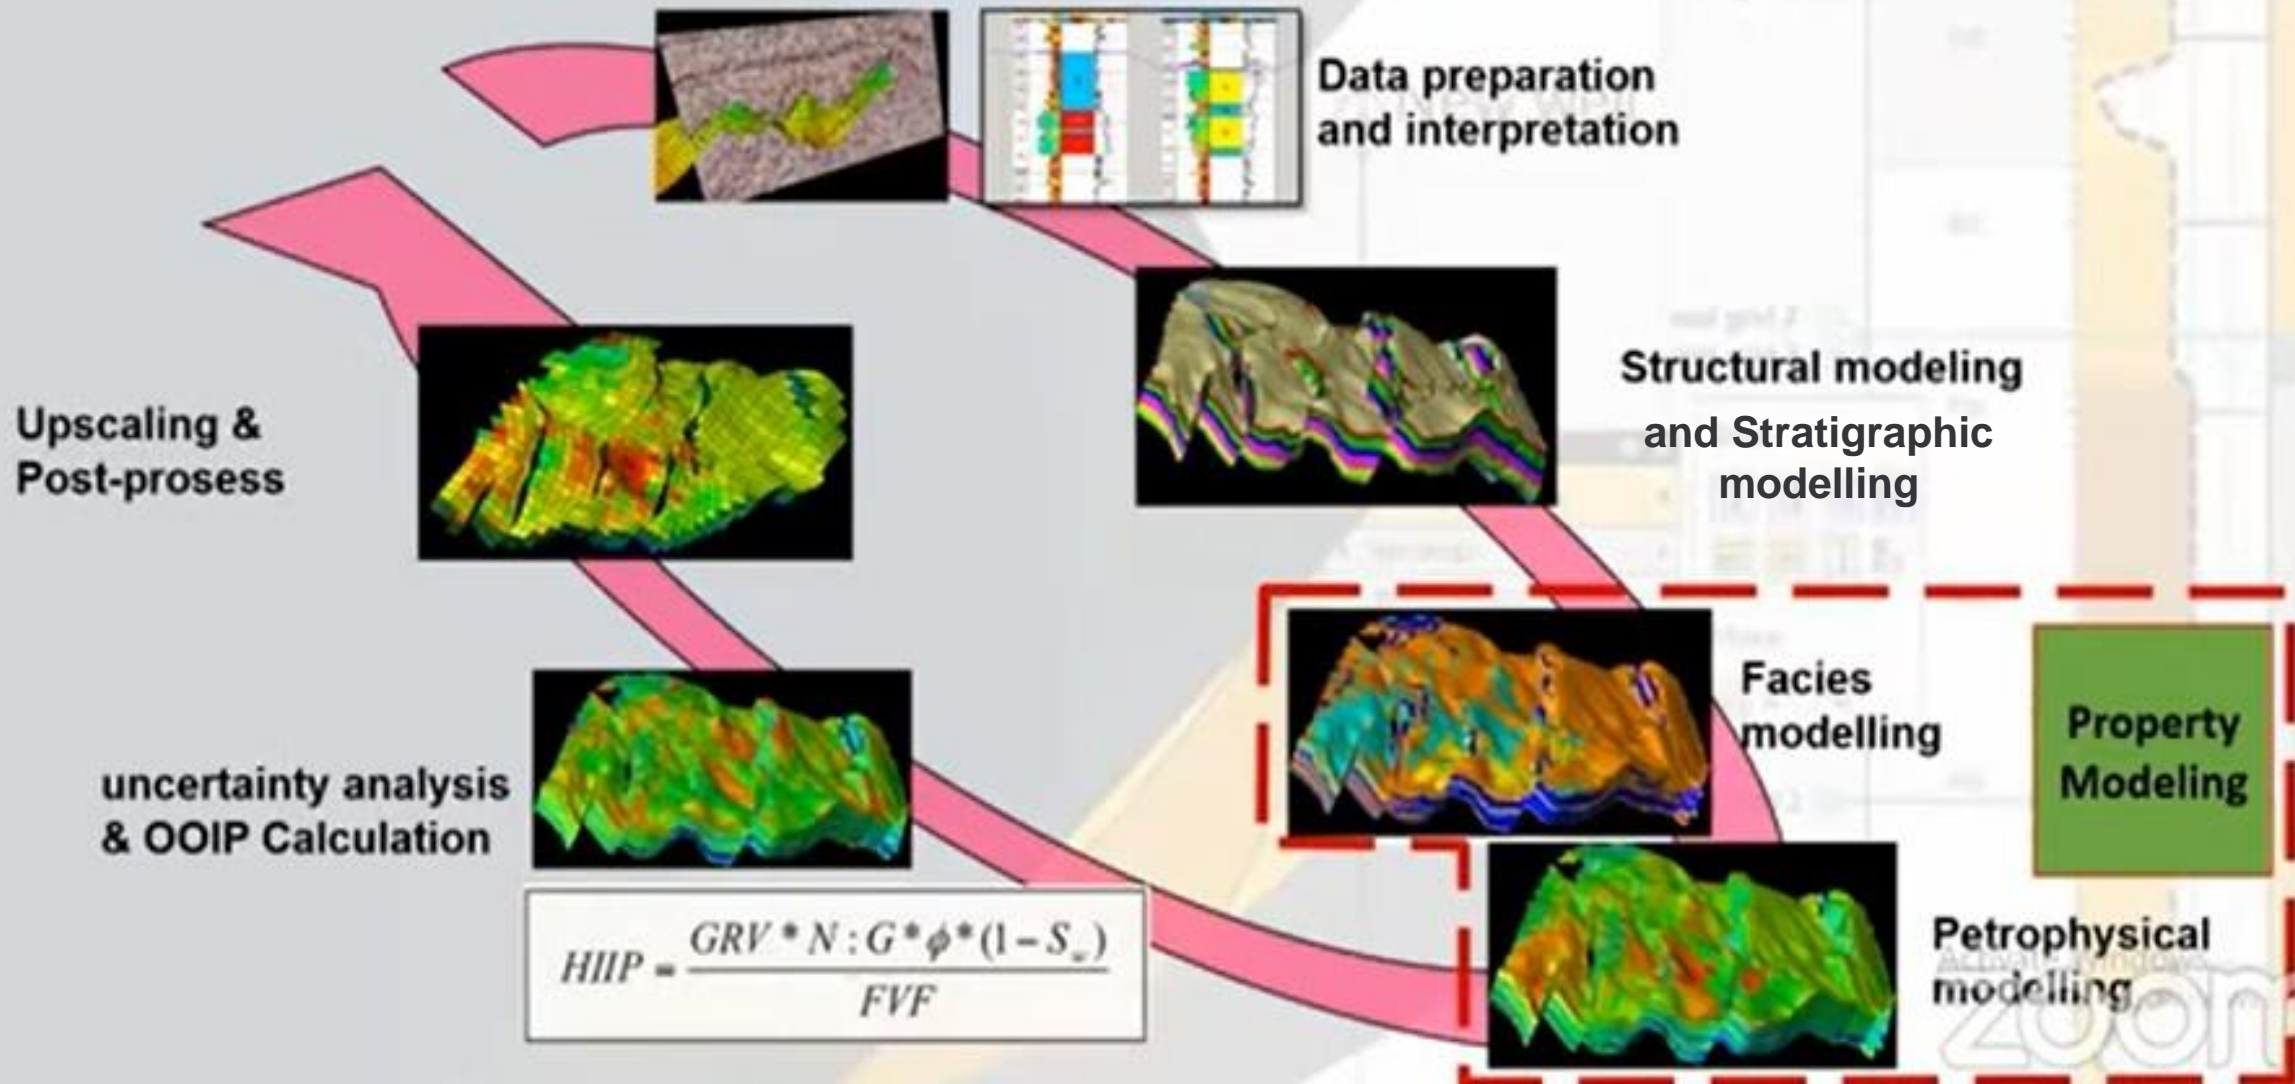

- Reservoir models has two main steps:
  1. Static modelling
  2. Dynamic modelling

# The Modeling Workflow

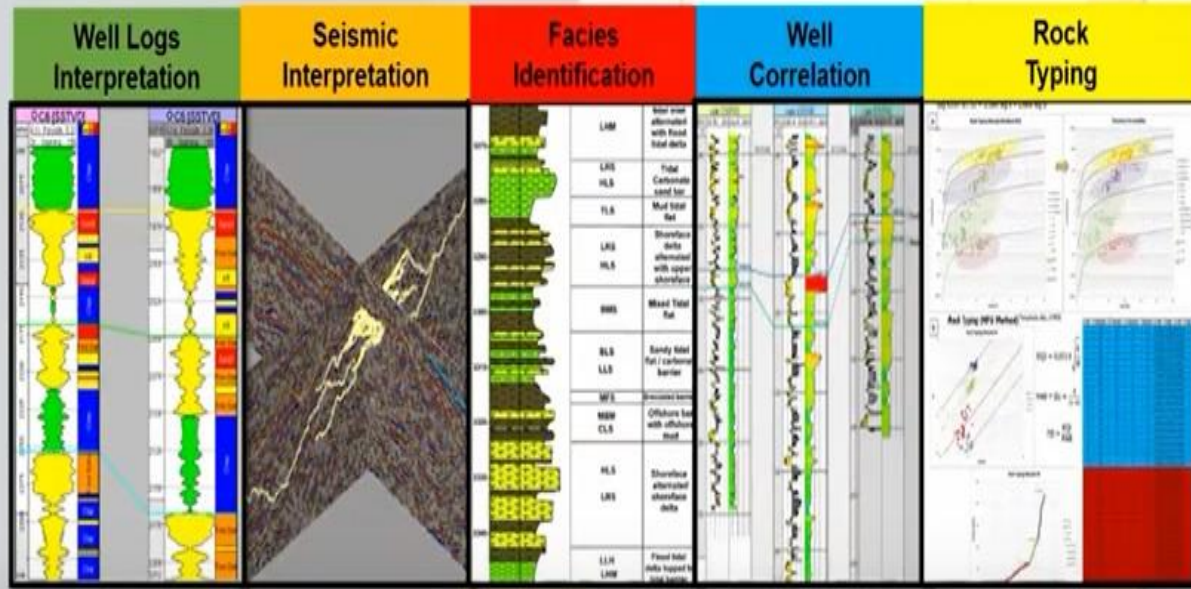

# Reservoir Static Modeling workflow

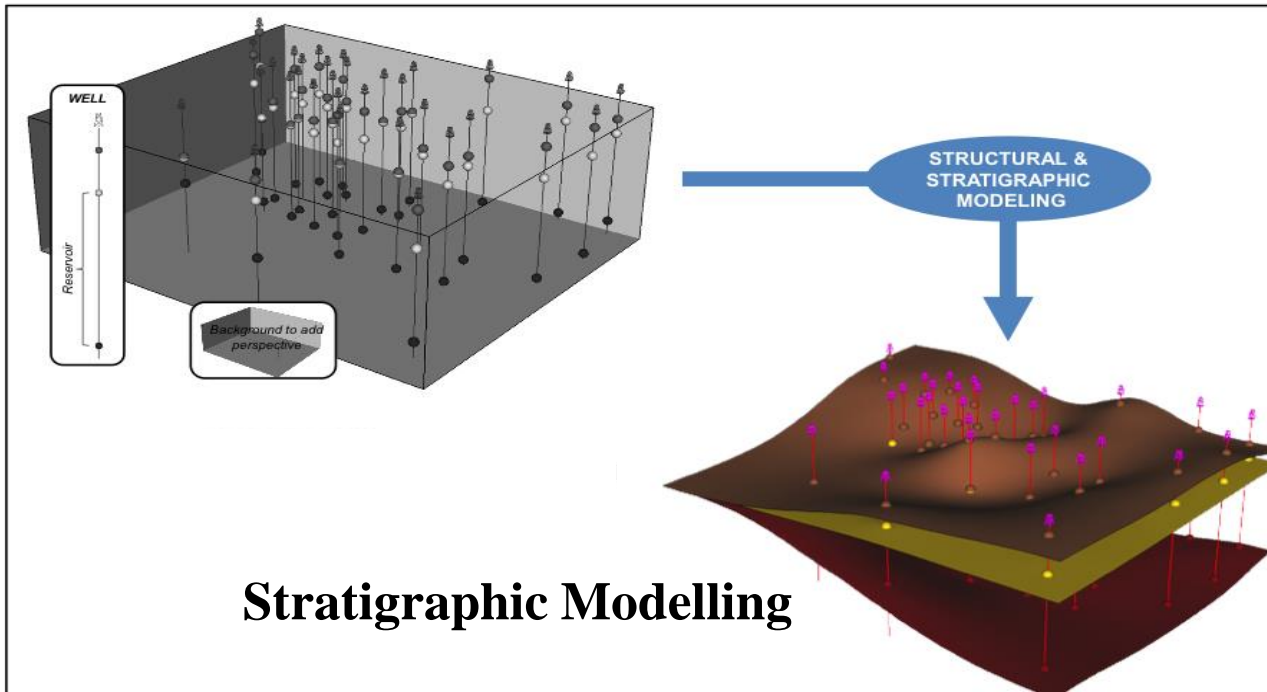

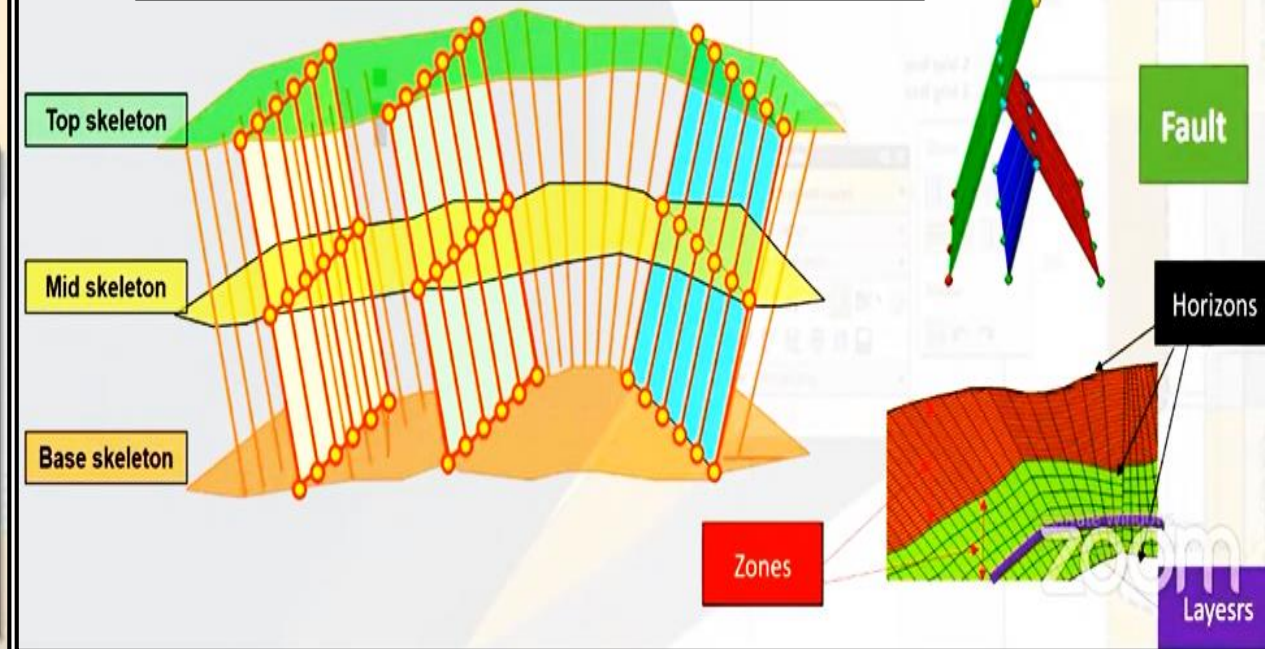

# • Data preparation and interpretation Examples:

## Structural Modelling

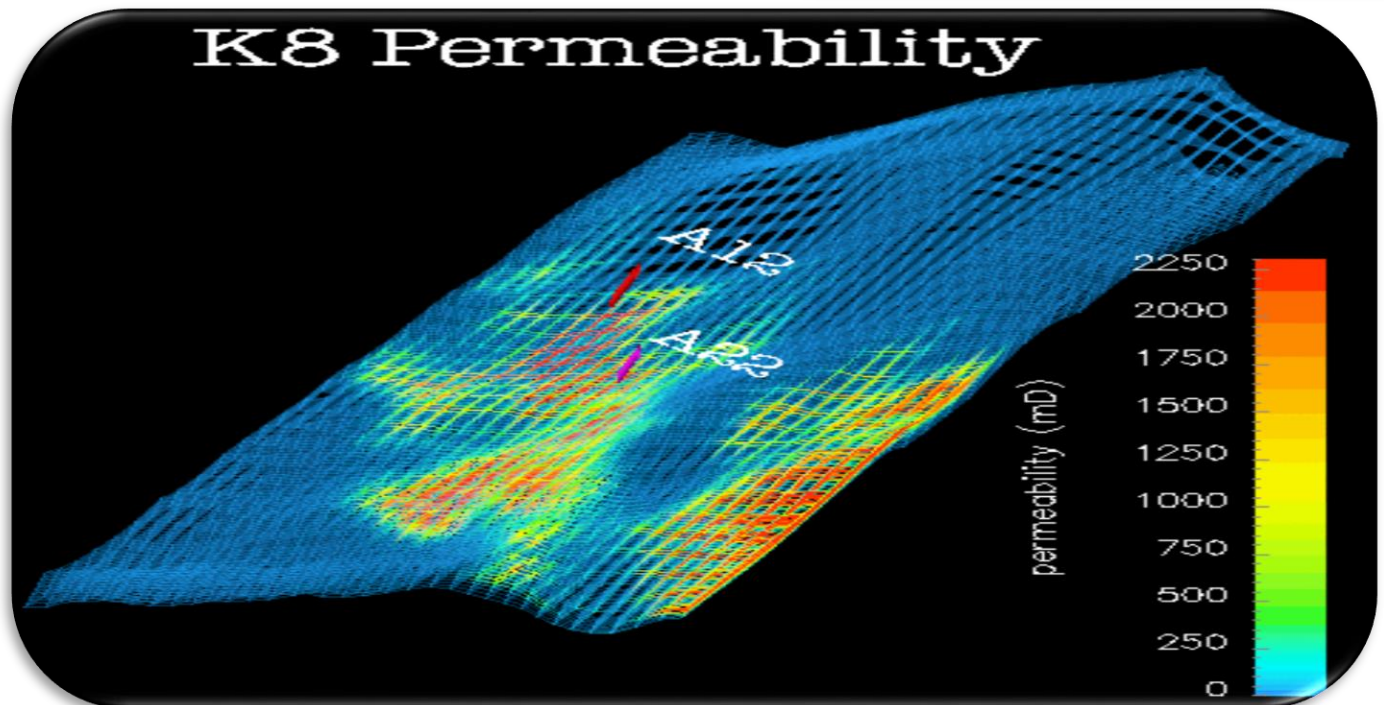

## Stratigraphic Modelling

## Facies Modelling

# Modeling Workflow

## Import, QC and visualization of input data

## Uncertainty estimation

## Volume calculation and reserves estimation

[illegible]

## Structural modelling

## Facies modelling

## Petrophysical modelling

# Basic Geological Elements in Modeling

## Zone

Geological unit bounded by horizons

1

## Horizon

Surface bounding a reservoir zone

- ▶ Interpreted Horizons
- ▶ Calculated Horizons

2

## Surface

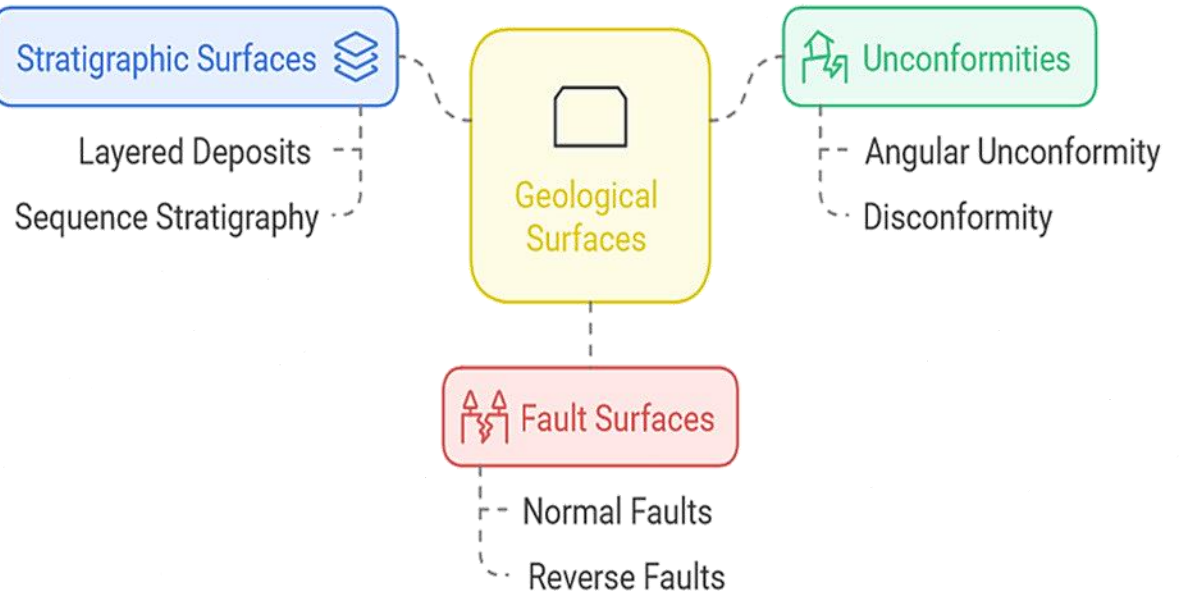

boundaries or interfaces between different geological units or zones.

3

## Well

Described by a trajectory (path) and associated logs, in addition to a well history.

4

# Reservoir Properties

**Static Reservoir  
Properties**

**Stratigraphy**

**Geometry**

**Lithology**

**Structure Framework**

**Size**

**Temperature**

# Reservoir Properties

**Dynamic Reservoir  
Properties**

**Fluid saturations**

**Production and fluid-flow rates**

**Fluid compositions**

**Acoustic (Seismic) properties**

**Fluid contacts**

**Pressure**

## The different positions of oil-water contact (OWC)

**(a)** Oil-water contact level before production

**(b)** after production for 10 years.

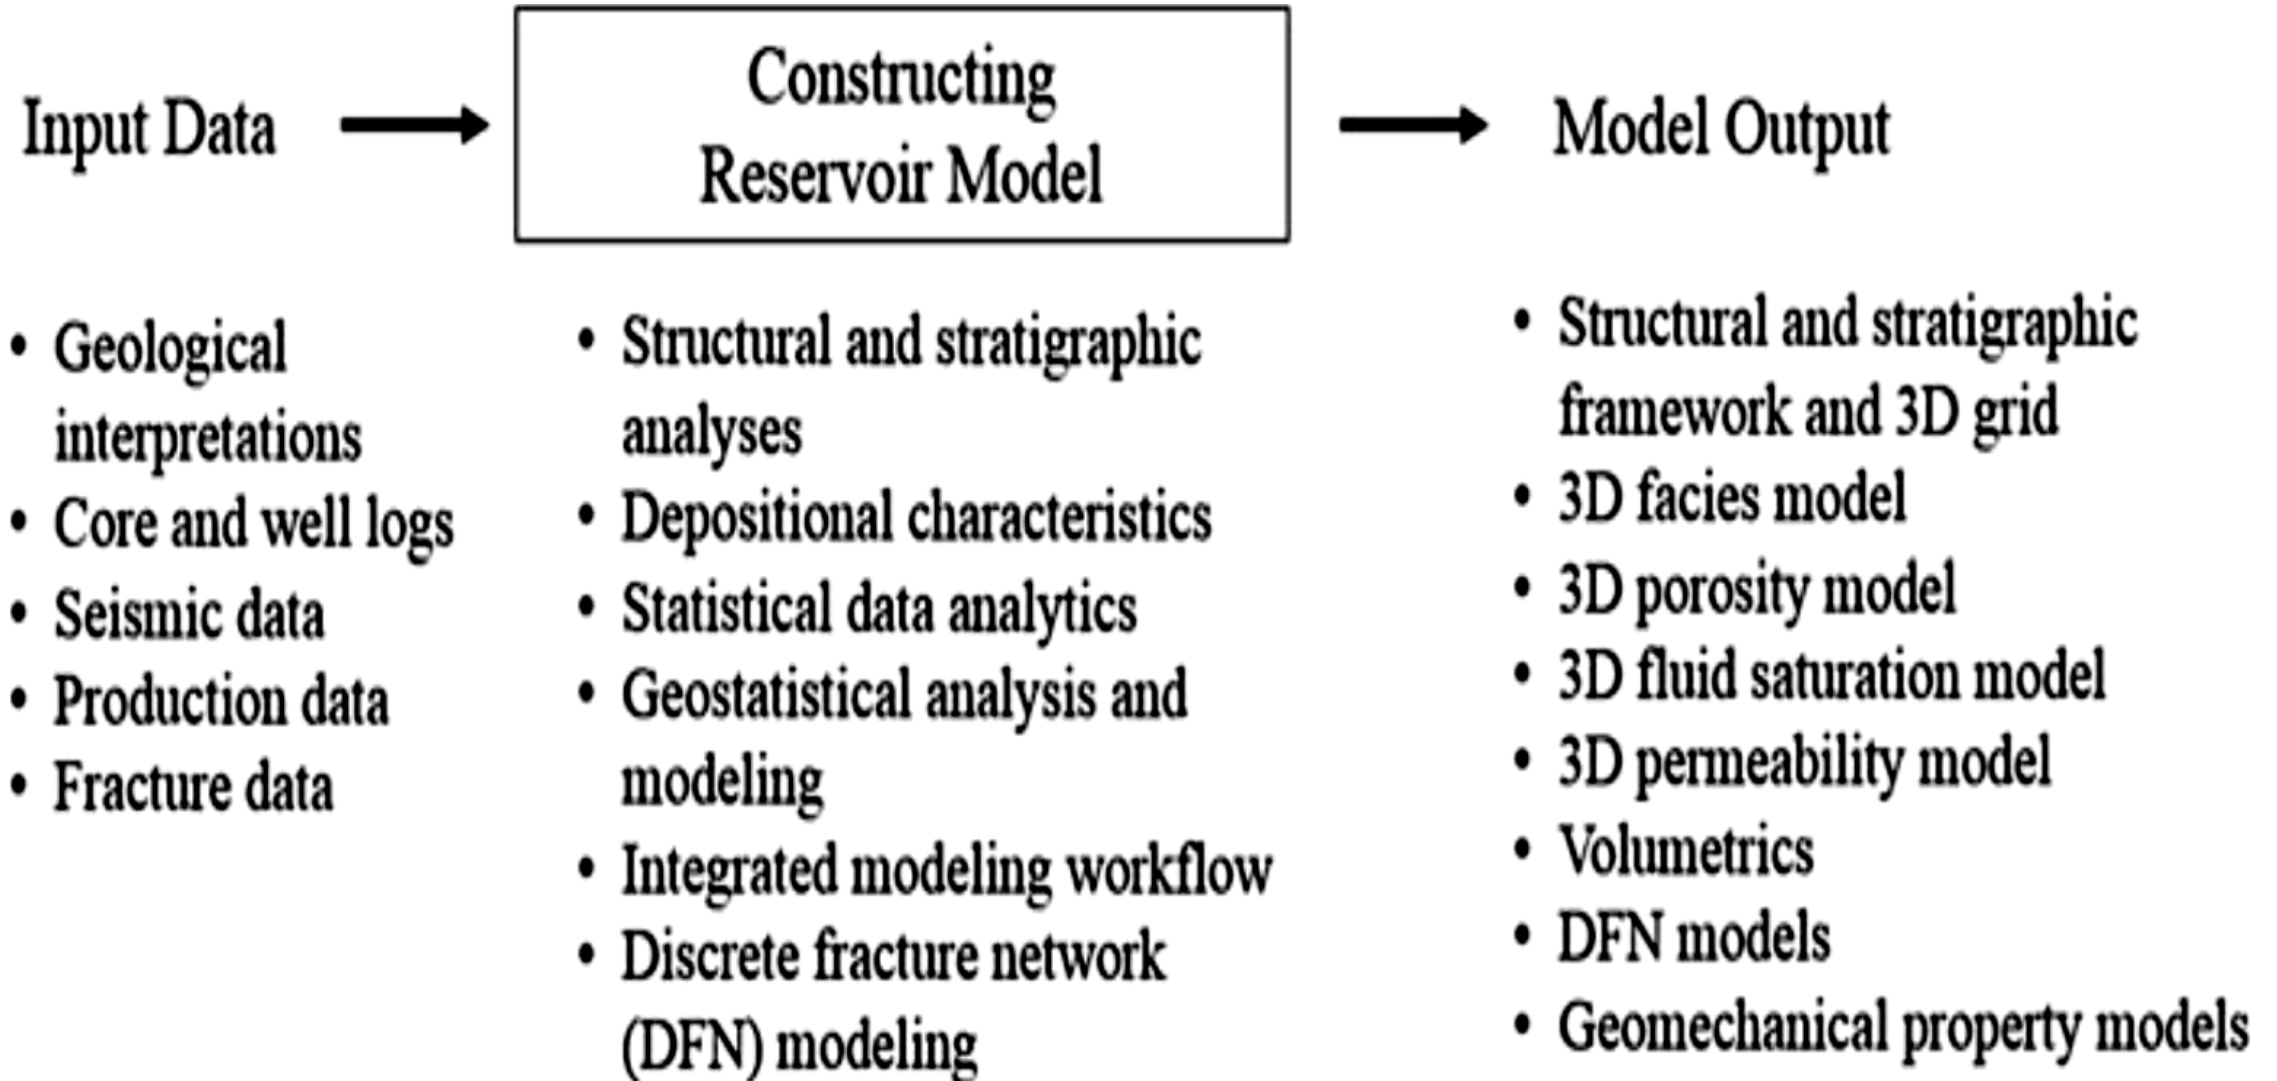

# Question: The formation thickness is

- A- Static Property
- B- Dynamic Property
- C- That depend on fluid content
- D- None of the above

# Key Elements of Reservoir Modelling:

# Specific Reasons for Constructing R 3D Models:
