	This specialization focuses on applying principles and techniques of physics, biology, and medicine to train professionals who support medical diagnosis, treatment, and research.	Specialization	الاختصاص
	<p>The Medical Physics program at the University of Mosul's College of Science is all about combining physics with medicine to help improve healthcare. Over four years, students learn the basics of physics, like how forces work, how light behaves, and the nature of atoms, and then apply those ideas to real-world medical tools and techniques.</p> <p>Students study fascinating topics such as medical imaging (think X-rays and MRI), radiation therapy used to treat diseases like cancer, and the safe use of medical lasers. Alongside the physics, students also explore biology and understand how the human body functions, which is key to applying physics in medicine effectively.</p> <p>In this program students spend plenty of time in labs and working on projects that give them hands-on experience. By the time they graduate, students have the skills and knowledge to work in hospitals, research centers, or companies that develop medical technology making a real difference in patient care and medical innovation.</p>	Program Description	وصف البرنامج
