Department of Science and Technology Parks in Brief...

The Science and Technology Parks Department is an advanced university center that reflects the university's focus on innovation, entrepreneurship, and technology transfer. The department aims to create a complete system that supports startups, helps student and researcher entrepreneurs, and enables them to turn scientific knowledge into valuable products and applications for the economy and society.

It also works to connect scientific research with market and industry needs by building strong partnerships with local and international organizations. This helps develop a sustainable knowledge-based economy that follows global trends in technology and innovation. The department plays a key role in helping the university achieve academic excellence and serve the community.

The department includes four main units:

- **Training and Employment Unit:** We prepare students and graduates with practical skills and training programs to enter the job market confidently.
- **Technology Incubator and Ecosystem Unit:** Supports innovative ideas and helps turn them into real startup projects.
- **Scientific Output Marketing Unit:** Promotes and markets the university's research and scientific work to benefit industry and society.
- **Entrepreneurship Unit:** Builds a culture of entrepreneurship and encourages the creation of projects that support a strong national economy.

Together towards a productive university, creative graduates, and a thriving job market.

Vision, Mission, and Objectives

Vision

To make the Science and Technology Parks Department a leading global university platform in innovation, entrepreneurship, and technology transfer — contributing to building a sustainable knowledge-based economy and strengthening the university's role as a key driver of national and international development.

This vision is shown through a complete system that puts students and graduates at its core by preparing them for the job market with advanced skills, supporting innovation, and developing research and entrepreneurship.

Mission

The Science and Technology Parks Department strengthens the university's role in serving society and the economy by helping students and researchers turn knowledge into practical applications. It supports startups and entrepreneurial projects within a fully integrated innovation environment. The department also connects scientific research with industry needs through local and international strategic partnerships, and works to promote and globalize research outputs — boosting the university's competitiveness both nationally and globally.

Objectives

1. Prepare and train students and graduates through advanced training and entrepreneurship programs to improve their chances of entering the job market.
2. Support the creation of knowledge-based startups and help them grow and compete globally.
3. Promote and develop university research to align with development priorities and industry needs.
4. Spread a culture of innovation and entrepreneurship among students and faculty, connecting it with global best practices.
5. Build strategic partnerships with industry, government, civil society, and international organizations.
6. Contribute to the development of a national and international knowledge- and innovation-based economy, with a strong focus on preparing graduates and enabling them to access sustainable job opportunities.

Main Tasks of the Science and Technology Parks Department

The Science and Technology Parks Department acts as a vital link between the university, the job market, and the industrial sector. It serves as a key driver for the innovation and entrepreneurship ecosystem. The department's tasks are organized within a clear strategic framework, as follows:

First: General Tasks of the Department

1. Plan and implement programs and initiatives that promote a culture of innovation and entrepreneurship within the university.
2. Support the transfer of technology from the university to society and industry by turning research ideas into real, marketable products or services.
3. Host and support startups and entrepreneurial projects by providing technical, administrative, and logistical support in a fully integrated innovation environment.
4. Strengthen scientific and economic cooperation between the university and government institutions, the private sector, and international organizations in research, development, and innovation.
5. Contribute to building a sustainable knowledge-based economy by developing initiatives that create quality job opportunities and support knowledge-based projects.
6. Organize events, conferences, and science and technology exhibitions that showcase the university's work and encourage the exchange of experiences and innovations.
7. Oversee the department's internal units and ensure their work is aligned to achieve the university's strategic goals in training, innovation, scientific marketing, and entrepreneurship.

Second: Tasks of the Department's Units

1. Training and Employment Unit

- Organize workshops and training sessions to develop specialized skills, e-management skills, decision-making abilities, and leadership capacities for students and graduates.
- Provide career counseling, track graduates, and analyze employment outcomes.
- Create a database of graduates and employers, and organize job fairs and networking events.
- Implement the National Strategy for Education and Higher Education (2021–2031), focusing on training, employment, and follow-up.
- Activate partnerships with government agencies and NGOs to offer job opportunities and training programs.

2. Technology Incubator and Ecosystem Unit

- Support innovative ideas and entrepreneurial projects, turning them into viable startups.
- Offer technical support and consulting in management, marketing, and financing for incubated projects.
- Build an integrated work environment that supports the innovation ecosystem within the university.

3. Scientific Output Marketing Unit

- Document and promote the university's research and scientific outputs, linking them to industry and community needs.
- Develop systems for intellectual property protection, patent registration, and promotion.
- Organize science exhibitions and promotional campaigns for innovative products developed through university research.

4. Entrepreneurship Unit

- Strengthen the culture of entrepreneurship among students and faculty, and encourage them to launch entrepreneurial projects.
- Design training programs and development initiatives that boost creativity and initiative.
- Build local and international networks to support university entrepreneurs and help them reach markets.
